The Kepler Essence of Malt.

NEW NON-ALCOHOLIC SUBSTITUTE FOR BEER, as an aliment and stimulant, has been long considered a desideratum in clinical dietetics. The introduction of the Kepler Essence of Malt appears to be highly appreciated by a large number of physicians and others interested in sickroom dietetics and temperance.

The Kepler Essence of Malt is prepared in vacuo at a low temperature, and the essential principles of the malt, the digestive and nutritive properties, therefore remain in an unimpaired condition. The opposite, of course, is the case with ale or stout, in which the nutritious properties are converted by fermentation into alcohol, while the diastase is necessarily destroyed by boiling. The Essence of Malt is also rich in phosphates and tissue-building carbohydrates.

**Superior to
ale, beer, etc.**

The Essence will be found very convenient for use on account of its syrupy consistence. For the same reason it is very *desirable as a vehicle* for the administration of various medicaments, as, for instance, Iron, Quinine, Pepsin, Strychnine, Iodide of Potassium, etc., etc. A concentrated ale, containing far more nutrient material than the finest alimental beer, can be made from it,

**A Useful
Vehicle.**

which can be employed as a temperance beverage. By adding to it a little tincture of hops, chiretta, kroat, or quassia or a little of each of these bitters, the mixture is similar in flavour to bitter ale. A tablespoonful of this solution or concentrated ale could be added to a tumblerful of a natural sparkling table water, such as Rosbach or Apollinaris; if these are not at hand, Soda or other aerated waters can be used, when a rival of the best ale would be produced in a moment at a small expense and without intoxicating properties.

**A concentrated
beer.**

FOR A FOOD IN FEVERS.

Nothing could be more agreeable or nutritious than one or two tablespoonfuls of Essence of Malt added to an equal quantity of fresh cream, and, if the glass be filled with Rosbach or other aerated water, makes a delicious drink. This combination, containing the proper proportions of fat, carbo-hydrates and phosphates, forms an ideal food for building up muscle, brain and bone substances.

**A Food in
Fevers.**

The Essence will also be very convenient for use in place of Syrup, as a sweetening agent for farinaceous dishes, porridge, pancakes, medicinal and other fluids, while its digestive powers will greatly assist in the assimilation of all starchy foods. It possesses an important advantage over preparations of cane or beet sugar in that it is not liable to acetous fermentation; in fact, its tendency is to correct that

**A digestive
Agent.**

acetous tendency to fermentation which is caused by the indigestion of starchy foods and ordinary sugars. It is an admirable addition to milk, which it agreeably sweetens, and also exerts a decided digestive or solvent action upon the caseine. *If a tablespoonful of the Essence be added to a glass of milk, and the mixture warmed, acid may afterwards be added without producing the heavy clot of caseine, which is observed when vinegar or any acid is added to ordinary milk. It is therefore desirable as an infants' food, and a little salt or Bicarbonate of Soda may be added for this purpose.*

"Vaporoles."—For inhalation and fumigation.

Consist of glass capsule, surrounded by cotton and enclosed in beautiful silken sack. Put up in boxes, each containing 12 "Vaporoles" (one variety only) Per box. Doz. boxes. 2/6 24/0

1. "Vaporole" Carbolic Acid, 20 minims.
- * 2. " " Ether, 30 minims.
- * 3. " " Amyl Nitrite, 5 minims.
4. " " Tinct. Benzoin Co., 30 minims.
- * 5. " " Chloroform, 30 minims.
6. " " Creosote, 10 minims.
7. " " Cubebs and Lemon, 5 minims.
8. " " Iodine Tinct., 10 minims.
9. " " Juniper, 2½ minims.
10. " " Terebene, 10 minims.

"Vaporoles"—continued.

11. "Vaporole" Pinol, 10 minims.
12. " " Eucalyptia, 10 minims.
- * 13. " " Amyl Nitrite, 3 minims.
14. " " Ol: Pini Sylvestris, 5 minims.
15. " " Ol: Calam. Aromat., 1 minim.

DIRECTIONS: Crush a "Vaporole" between the finger and the thumb. For inhalation, drop a crushed "Vaporole" (except the varieties marked with an asterisk) into a narrow mouthed jug containing ½ pint of boiling water, or the water-bottle of the Vereker Ammonium Chloride Inhaler, or of a Steam Atomiser. The Vaporoles marked thus * may (after crushing the enclosed capsule) be inhaled by simply holding in the palm of the hand. For fumigation, place a crushed "Vaporole" on a hot plate, the fumes will then impregnate the atmosphere of the room.

FOR AURAL USE.

16. Iodoform Solution in Pinol, 1 in 7, 7 minims
17. " " Eucalyptia, 1 in 7, 7 minims.
18. Iodine Tincture, 5 minims.

The capsule containing the medicament in its protecting cover of Absorbent Cotton and silk is readily crushed, and when thoroughly bruised may be inserted into the meatus; the whole of the external Ear is thus exposed to the vapour from the "Vaporole."

Vereker Chloride of Ammonium Inhaler (see Inhaler).

Vulcanite Nozzles for screwing on to any collapsable Tubes of Ointments, such as Lano-Creolin and Toilet "Lanoline," affording a means of introducing ointment to the mucous membrane of the Nose, Ear or Urethra Retail. Per doz. 1/6 12/0

Wafer Medicine Cachets (see Cachets, Wafer Medicine).

Wallich's Inhaler, a perfected inhaler for inhalation of steam impregnated with any medicament 5/0 48/0

Oro-Nasal Respirator for ditto 3/6 32/0

Ward Cousins' Appliances (see Ear Drums and Rectal Injectors).

Wound Pads (see Artificial Sponges).

Wyeth Dialysed Iron (see Dialysed Iron).

Zymine and Preparations (see Fairchild Preparations).

Zymised Meat Suppositories—

Each containing digested equivalent to ½ oz. fresh beef, 1 doz. in box Per box. Per doz. bxs. 2/6 22/0

Zymised Milk Suppositories—

Each containing digested equivalent to 5 drachms of fresh milk 2/6 22/0

American Goods imported to order. We have special facilities for making purchases through our connections in New York, Philadelphia, Boston, &c., and are receiving direct shipments every few days. Cash should always accompany such orders.

New and Improved "Tabloids."

(The latest additions to our "Tabloid" list.)

Guaiacum and Sulphur "Tabloids"

Each contain 3 grs. each of resin Guaiacum and Sulphur, and have been found of great service in chronic rheumatism, gouty affections, tonsillitis, and in various cutaneous diseases. The therapeutic value of Guaiacum in several affections is greatly enhanced by its association with Sulphur as in these "Tabloids," which, if only for their laxative properties, are really valuable. In bottles of 100 each.

Ichthyol "Tabloids."

Containing $2\frac{1}{2}$ grs. each of the Ammonium Sulpho-Ichthyolate. The growing importance of Ichthyol makes it absolutely necessary to have the least objectionable form for internal exhibition. In these "Tabloids" the somewhat unpleasant aroma of the Ichthyol is perfectly covered, and the "Tabloid" is wholly protected by an elegant white pure sugar-coating. Ichthyol has been used with marked effect in Acne Rosacea, Lepra, Eczema, Rheumatism, Gout, Chlorosis, Scrofula, &c. The objections to gelatine capsules and gelatine-coated pills (the only forms hitherto obtainable for the internal administration of Ichthyol compounds) viz., their insolubility and ill-disguised aroma, are avoided in the new "Tabloids," which have an absolutely soluble coating. In bottles of 25 and 100.

The new Peptonic "Tabloids."

Formula—Zymine (Ex. Pancreatis), Calcium Lacto-Phosphate, Pepsin, of each $1\frac{1}{2}$ grs. The internal arrangement of these "Tabloids" is made with a view to meet the requirements of physiological chemistry, and to follow the digestive process through the stomach to the intestinal canal. A "Tabloid" of Zymine (Ex. Pancreatis) and Lacto-Phosphate in the proportions above given is covered with Keratin, and outside this is a layer of Pepsin. The whole is then coated with sugar. The sugar-coating as well as the Pepsin dissolves readily in and assists the assimilative process of the stomach. The Keratin-protected kernel is still intact, and remains so until it reaches the intestinal canal, where it is dissolved, and must effectually assist the pancreatic digestive process in that stage. These "Tabloids" are easily swallowed with a draught of water, and are put up in bottles of 25 and 100 each.

Sugar-coated "Tabloids."

The favour with which these elegantly coated "Tabloids" has been received by both physician and patient, has encouraged us to enlarge the original list, and we now issue sugar-coated "Tabloids" of all the following:—Cascara Sagrada, Compound Cascara, Aloin Co. Anti-constipation, Cathartic Co., Quinine 1 gr., 2 grs., 3 grs., and 5 grs., Rhei Co., Ichthyol, and Lithia Co. Tonic Comp., Ferri et Quin. Cit., Iron and Arsenic Comp., Peptonic, Calcium Sulph. $\frac{1}{10}$ gr.

Tincture "Tabloids."

These are made from freshly standardized Tinctures, and not being liable to any decomposition, are reliable and uniform, and always represent the exact equivalent of the particular tincture concerned.

The following are already issued:—

Tr. Belladonna, 1, 5 and 15 minims.
Tr. Camph. Co., 5 and 15 minims.
Tr. Cannabis Indica, 5 minims.

Tr. Hyoscyam., 1 minim.
Tr. Nucis Vom., 1, 3 and 10 minims.
Tr. Opii, 2, 5 and 10 minims.

Tinct. Zingib. Fort., 5 minims.

CHEMISTS' TRANSFER AGENTS

May be consulted at their Offices on matters of SALE, PURCHASE, and VALUATION.

The business conducted by Messrs. ORRIDGE & Co. has been known as a Transfer Agency since the year 1846, and is well known to all the leading firms in the Trade. VENDORS have the advantage of obtaining an opinion on value derived from extensive experience, and are in most cases enabled to avoid an infinity of trouble by making a selection from a list of applicants for purchase, with the view of submitting confidential particulars to those alone who are most likely to possess business qualifications and adequate means for investment. PURCHASERS who desire early information regarding eligible opportunities for entering business will greatly facilitate their object by describing clearly the class of connection they wish to obtain.

1.—LONDON.—Thickly populated locality; good-class Retail and Family Business; returns, from profitable trade, about £1,300 yearly; shop well-fitted, and ample stock; about £1,200 required.

2.—LONDON, N.W.—First-class locality; Dispensing and Retail of good class; returns over £800 yearly; with a good appointment attached; well-fitted shop and excellent stock; large house; about £700 required.

3.—LONDON SUBURB, S.W.—Good-class Business for immediate disposal; returns at present about £450 yearly, capable of being much increased; good house and small garden; full particulars on receipt of London reference.

4.—LONDON, E.—Capital opportunity offers for the transfer of a very old established good-class Family Business; returns at present over £600 yearly, with good profits; large handsome shop; part may be paid by instalments if wished; valuation only required.

5.—LONDON, S.E.—Retail and Prescribing; held by vendor many years; returns average £623; single-fronted well-fitted shop and good stock; good house, small garden, greenhouses, &c.; about £550 required.

6.—SURREY.—Dispensing and Retail old-established Business; well-fitted shop and ample stock; returns £600 yearly; very good profits; convenient house, with garden, &c.; about £550 required.

7.—HOME COUNTY.—Old established Mixed Family Business; returns £1,250 yearly, with good profits; large house, and good shop attached; small premium and valuation only required.

8.—NORFOLK.—Excellent County Business; Dispensing and Retail; steadily increasing; returns at present at the rate of £1,450 yearly; good house, &c.; about £1,200 required.

Messrs. CROCKER & CO.

Trade Valuers, Transfer Agents, and Accountants,
15 WALBROOK, E.C.,

Have at the present time a large number of enquiries for good-class Country Businesses, and they invite communications from intending vendors. No charge is made unless a sale is effected, and particulars of businesses are given to those only having the required amount of capital to invest, thus guaranteeing only *bona-fide* enquiries and obviating publicity. Valuations made for Probate, or Transfer Books audit and Balance Sheets prepared in any part of the United Kingdom. Having had many years' practical experience in the Wholesale and Retail Drug Trade, C. & Co. can offer valuable assistance and advice in the conduct of such matters. References permitted to past and present Clients, also to the Leading Wholesale Houses in the Trade.

JOHN GOWER, 4 Lancing Road, Ealing, London.

COUNTY COURTS JURISDICTION.

PURSUANT to an order of the Shoreditch County Court of Middlesex, holden at 221 Old Street, City Road, in the said county, made on the 30th day of June, 1892, in an action Lacey v. Grieg, U. 3,620, Equity, the creditors of, or claimants against, the estate of Stuart Grieg, otherwise known as James Mordant Buckley, late of 12 Clapton Pavement, Clapton, in the aforesaid county, Chemist and Druggist, who died in or about the month of February, 1892, are, on or before the 20th day of August, 1892, to send by post, prepaid, to the Registrar of the Shoreditch County Court of Middlesex, 16 Charles Square, Hoxton, N., their Christian and surnames, addresses and descriptions, the full particulars of their claims, a statement of their accounts, and the nature of the securities (if any) held by them. In default thereof they may be excluded from any benefit in the estate. Every creditor holding any security is to produce or transmit the same to the Registrar aforesaid on or before the 9th day of September, 1892, at 11.30 o'clock in the forenoon, being the time appointed for adjudicating upon the claims.

Dated this 25th day of July, 1892.

ERNEST E. WICKHAM,
Registrar.

THE CHEMISTS' AND DRUGGISTS' DIARY, 1893, IS NOW IN PREPARATION.

For Advertisement Tariff, and full particulars, apply to
THE PUBLISHER, 42 CANNON STREET, LONDON, E.C.

SUPPLEMENTARY NEWS ITEMS.

A Chemist Cuts his Throat.

Thomas W. Ryle, aged 24, described as a chemist, but not on the register, of North Terrace, Crook, near Darlington, was found by a police-constable in Arkwright Street, with his throat cut, and his clothes saturated with water. The constable took him to the London Road Police Station, and he was afterwards conveyed to the General Hospital on an ambulance, where it was found that the wound, though not of a very serious nature, necessitated his being kept at that institution.

A Dublin Drug Business at Auction.—No Bid.

On Tuesday, July 26, in the Court of Bankruptcy, Dublin, presided over by Judge Boyd, the establishment and interest of Mr. Charles Johnston, druggist, Upper Sackville Street, Dublin, were put up for auction. A number of gentlemen connected with the drug-trade were present, but not a single bid was elicited, nor was there any mention of any private offer for the estate having been received.

The North Dublin Union Drug Contract Settled.

The wrangle for the contract for supplying drugs to the North Dublin Union has resulted in the Guardians dividing the contract between Messrs Thacker & Hoffe (Limited) and Messrs. Leslie & Co., both of Dublin. The items which each firm is to supply cheapest have been picked from their respective tenders, and thus the Guardians have the best of the deal.

Wholesale Chemist and Schoolmistress.

At the Leeds Assizes on Tuesday, Sarah Martha Templeton, National schoolmistress of Halton West, near Hellifield, sued Robert Lund Tempest, of Crosshills, near Kefhley, for breach of promise of marriage. The plaintiff's counsel described the defendant as "a wholesale chemist, grocer, drysalter, and dental surgeon." He is not a registered chemist and druggist. Mr. Tempest has to pay 400*l*.

"A Blow to the Big profit Chemists."

This is the title of a long advertisement which is being inserted in the Manchester papers by "Boots, the cash chemists of Sheffield, Nottingham, Lincoln, Derby, Grimsby, &c.," who recently opened a branch establishment at 80 Oldham Street, Manchester. The following extracts from the advertisement will give an idea of the lines on which the company seek to carry on business:—"Important Notice.—Don't Buy Stale Drugs.—We sell too fast to keep any, having such a number of outlets in different towns that quantities melt away like snow, and we are always having fresh supplies. We can beat any other chemist's prices in the kingdom for the following five reasons:—(1) We have an immense turnover in other towns, which lightens expenses all round. (2) We buy very large quantities of goods at one time to supply all our shops. (3) We must get on selling, and therefore mark prices down to the lowest point. (4) We give the public the benefit of our discounts. (5) We buy direct from the makers, and thus save intermediate profits. Quinine wine, full strength, 2*s*. 6*d*. bottle for 1*s*.; quinine pills, 2 grains in each pill, 1*s*. box for 3*d*.; pure quinine, 1*s*. packet for 3*d*.; citrate of iron and quinine, guaranteed pure, 2*d*. per dram, 1*s*. per oz." Patent medicines are quoted at store prices, and it is announced that prescriptions are "carefully prepared with pure drugs at about half the usual prices."

A 20*l*. Fine for Keeping a Still.

At Marlborough Street Police Court, on July 27, Thomas Titley, chemist, of Charlotte Street, Tottenham Court Road, was summoned by the Excise authorities for having in his possession a still for the manufacture of excisable liquors. Mr. Alpe, barrister, prosecuted, and Mr. Freke Palmer, solicitor, defended. Arthur Llewellyn, a detective supervisor of Inland Revenue, said that he obtained a warrant to search the defendant's premises on June 29, and carrying it into effect the same day, he found a spirit still in the shop. It was of French make and had never been used. Mr. Titley told him that he bought it of a Frenchman named Sauris, who had it brought from Paris in February, and that he had advertised it for sale in a trade paper. Licences were issued to persons wishing to distil water and essences, but no licence would be granted for such a still as the one

in question. He had traced the fortunes of the still since its arrival in England, and found that after being shifted from one part of London to another, it was disposed of to Mr. Titley. Its value was about 25*l*. Mr. Hannay said that the defendant would have to forfeit the still and pay a fine of 20*l*.

Pharmaceutical Competitions in Manchester.

The Council of the Manchester Pharmaceutical Association announce that, through the kindness of the treasurer to the Society, Mr. William Stones, they are enabled to offer for competition among the apprentices and assistants of Manchester and district a number of *Herbaria* of medicinal plants, each containing sixty specimens. It is proposed to hold two examinations—one for apprentices and assistants under 21 years of age, and one for assistants over 21 years of age—an award being made to every competitor obtaining more than a certain percentage of marks. The competitions will be open to all apprentices and assistants whose masters are members of the Manchester Pharmaceutical Association. They will be held during the first week in October, 1892, and intending competitors are requested to send in their names to the Secretary (Mr. A. Blackburn) not later than September 19. The examinations will consist of written papers on the following subjects:—*Junior Examination*—Elementary Chemistry, embracing the chief characters of the Metals and Non-Metals and their Salts, the commoner Compounds of Carbon, and the principal Laws of Chemistry; Elementary Botany, including Morphology and the chief facts in Vegetable Physiology; Pharmaceutical Latin—Translation of Prescriptions and Extracts from Pharmacopœias; the Metric System of Weights and Measures; an Essay of about 250 words upon a selected popular topic. *Senior Examination*—The Translation of Latin and English Prescriptions, and a description of the best methods of dispensing them; Pharmacy: The modes of Preparation, Characters, and Composition of the *Aqua*, *Glycerini*, *Linimenta*, and *Unguenta* of the British Pharmacopœia; Posology: The Doses of the Poisons scheduled in the Pharmacy Act, 1868, and of their Official Preparations.

THE AMERICAN DRUG-MARKET.

(By cable from our Correspondent.)

NEW YORK, Wednesday Night.

THERE have been several alterations in our drug-market this week. Jalap is advancing in price and has now reached 33 cents per lb. for good Vera Cruz. There has also been an advance in Mexican sarsaparilla, of which 40 bales have changed hands at 12½ cents, while owners now require 13 cents. Cablegrams received here from Europe have caused a considerable rise in Pará touquin beans, and the market for Angostura beans is very firm. Shellac shows an increase of 2 cents per lb. on the week. Peppermint-oil is declining. The price of the HGH brand has been wavering for some days, but there is now no longer any doubt that the bears are victorious.

OPIUM IN SMYRNA.

(From our Correspondent.)

SMYRNA, July 23.

ALTHOUGH our opium-market is quiet, there are few sellers at the prevailing quotation of 6*s*. 2*d*. to 6*s*. 4*d*. for old tale quæ, and there is every probability that these figures will be maintained for some time to come, especially as local speculators are offering 6*s*. 6*d*. for good current opium of the new crop, and 5*s*. 11*d*. for current tale quæ f.o.b., but hitherto holders refuse to sell at above quotations. There are also a few buyers at 6*s*. 2*d*. for old current manufacturing; and 6*s*. 4*d*. for selected ditto and slightly Karahissar seconds.

It is reported from Amsterdam that the Government will invite tenders for about 300 cases for their Dutch Possessions in September, but later on the quantity will be increased, as about 600 to 700 cases are annually taken for the East India Islands.

The arrivals of new opium to date are 750 baskets, against 800 at the same date last year.

ENTERPRISE.

Hard times, dull weather, vacation, and sundry other excuses are given by innumerable people as an explanation for their not doing good business. Yet if these same people will look around they will find their neighbours Mr. Smith, Mr. Jones, and Mr. Brown doing fairly well. How is it that, despite the drawbacks, the latter get on in the world while the former remain stationary? Generally speaking, is it to be supposed that in the one case the same obstacles do not apply as in the other? Are the successful men those who have no obstacles to overcome? Enterprise is a thing which means something different from standing still in the midst of hard times and being ridden down by competition. It may be put down as fairly near the mark that while all may not succeed who deserve to, those who do succeed generally merit their success. There are many men who work faithfully, there are many men who think in a dozy way, but enterprise is something more than mere work and dozy thinking. It is taking advantage of every opportunity and being ready for everything. It is departing from stereotyped plans when entirely new conditions arise demanding new adaptation. In the world of pharmacy the law of adaptation can no more be disregarded without detriment than anywhere else, and if a chemist does not adapt himself to circumstances, it will not be the circumstances that will have to suffer—it will be the chemist. Probably few will dissent from this; but how are the new conditions to be discerned? Under the old *régime*, the chemist was satisfied to see the grocer doing all the profitable business in soaps. He adapted himself to this. Occasionally one here and there had put soap up in a box with his own name on, and got rid of it as he could. If certain goods did not bring him so much profit as he desired, he boycotted them or spent his time in producing imitations, of which he was able to sell very few. While he was busy in this fashion the stores were supplying the enormous demand created by extensive advertising. All this was adaptation of a kind, but it was a kind which means elimination of business. A larger business is being done in "Vinolia" Soap than in all the other high-class toilet soaps of Great Britain put together, and if there is here and there a chemist who is not doing a good business in it, it is his own fault and not ours. All that was necessary to be doing well in our products was to communicate with us. We supply Showcards, Literature, and Gem Tablets to chemists free. People seeing the Showcard in the chemist's window, noticing the Gem Glass Tablet, observing the pamphlets on the counter, may say:—

"Oh, yes, I saw "Vinolia" Soap advertised the other day.
I did not know you kept it; please give me a box."

By such enterprise the chemist secures for himself a share of the business created by large advertising.

All this does not require much work, and yet it is enterprise. If you look into the faces of two men they are not so very different, but in the little dissimilarity there is may be all the difference between profound success and ignominious failure. So between enterprise and ordinary work there may be little difference, yet sufficient to account for either success or failure. The exhibition of our goods themselves in a chemist's window renders it more attractive, and calls the attention of the passer-by to the fact that the chemist keeps them. We let the public know that our goods are to be obtained, and we create a good demand for them; but it is for each chemist himself to let the public know that he supplies them. The amount of business done in "Vinolia" Preparations by any one man in a given neighbourhood must necessarily depend on the enterprise he exhibits. Each one may rest assured that the public will have them. We invite the co-operation of all.

"Vinolia" Soap, Premier (for the million), 4d.; Floral, 6d.; Balsamic (Medical), 8d.; Otto (Toilet), 10d.; and Vestal, 2s. 6d. per tablet. "Vinolia" Cream (for Itching, Eczema, &c.), 1s. 9d. "Vinolia" Powder (for the Toilet, Nursery, &c.), 1s. 9d.

BLONDEAU ET CIE., RYLAND ROAD, LONDON, N.W.

("VINOLIA" SOAP WORKS, MALDEN CRESCENT, LONDON.)

HOMŒOPATHIC

MEDICINES

Homœopathy is an exact medical science. Accurate diagnosis is its true basis, and that is aided by careful and rigid selection of proven remedies. It is, therefore, in the highest degree necessary that the remedies should be of true potency, scrupulously pure, and as reliable as Truth itself.

Chemists who have made no special study of Homœopathy, and who retail Homœopathic Medicines, should be careful to note this assertion; and if they act faithfully up to it the result cannot fail to be beneficial to their reputation amongst Homœopaths.

It is a mistake to suppose that those who buy Homœopathic Medicines treat them as playthings. It is far otherwise, and through the influence of the oldest reputation and consistent endeavour to produce only Tinctures, Pilules, Globules, and Triturations of tested accuracy, LEATH & Ross's Medicines have become the most popular of all.

Chemists can gain immense advantages by stocking these Medicines, and to assist them in so doing full particulars are given in the Coloured List, which you will find in the last section of insets in this issue, of the forms and prices at which LEATH & Ross's specialities are offered. Please refer to it.

LEATH & ROSS

LONDON.

A FEW WORDS TO CHEMISTS.

ALTHOUGH a large number of Chemists in all parts of the world Stock our Coffee Essences, yet, we believe, the number would be trebled if certain facts respecting them were more widely known.

We ourselves select only the Best Coffees; we roast, blend, and extract their entire soluble constituents, including the Caffeine, by our own invented processes, and we devote the whole of our time and our extensive Works to the manufacture of Coffee Essences only.

Our goods go well with all other proprietary articles.

Our Pure Coffee Essence is much used for flavouring purposes; also by Invalids, who, owing to its freedom from irritating grounds, are enabled to safely enjoy this refreshing and stimulating beverage. It is likewise largely used by those who prefer their Coffee unmixed with Chicory. The Coffee and Chicory Essence is in general use throughout the world as a breakfast beverage, and for Balls, Suppers, Picnics, Garden Parties, &c., &c. Our Dandelion Coffee Essence is largely used by those lovers of Coffee with whom the ordinary beverage disagrees, this Essence combining the medicinal virtues of fine English Taraxacum with the refreshing and dietetic properties of Coffee.

There are a number of so-called Coffee Essences put up by makers of or dealers in various other articles, some of whom claim to be the oldest makers, some to be the newest makers, and others to be the sole inventors of square-shaped (Coffee Essence) bottles. *All their goods are offered under our List Prices* and on examination and comparison with ours will, no doubt, have two short and expressive adjectives applied to them. Some of these people do not make Coffee Essence.

As previously stated, we are expert Coffee tasters and roasters as well as practical Chemists, and have for twenty years made Coffee Essences our study—continually improving and perfecting them. A square-shaped bottle has been made by various bottle manufacturers for more than half a century. The oldest Coffee Essence manufacturers (now devoting themselves to another article) are an English firm whose advertisement we possess, dated nearly fifty years ago.

TO SUM UP.

You will find it pay you to take up the sale of Coffee Essences, and the only ones that will give you and your customers entire satisfaction are those of

THOS. SYMINGTON & CO.

SEND FOR PRICE LIST.

May,

The largest inset which has ever been distributed to the Drug Trade of the World through the medium of THE CHEMIST AND DRUGGIST is contained in this issue. Go straight for it, please, and preserve it.

Roberts

Some will get this List who have had dealings with the House before. They know the value of the List, and how beneficial it will be for them to continue sending their orders to M. R. & Co. They should examine the List once more.

& Co.

Others will get the List for the first time. They are respectfully requested to take the List and go faithfully through it. Then to turn up their want books and commission M. R. & Co. to replenish their stocks. It will pay them and please them, for M. R. & Co. have no travellers, and they divide the saving amongst their customers in reduced prices. *That is so.*

Fletchers' Concentrated Liquors

For PROPRIETARY REMEDIES and for PRESCRIBING PURPOSES the LIQUORS may be used in their CONCENTRATED form, thus effecting an enormous saving of spirit, without the slightest sacrifice of Therapeutical activity.

THE FOLLOWING ARE RECENT ADDITIONS TO OUR LIST.

Liquor Colchici. Medium Dose—10 minims.

This Liquor is standardized to four times the strength of Vin. Colchici, British Pharmacopœia.

$\frac{1}{2}$ -lb. bots., 3/6; 1-lb. bots., 6/6.

Liquor Hamamelidis. Medium Dose—5 minims.

This Liquor is standardized to four times the strength of the British Pharmacopœia Tincture.

$\frac{1}{2}$ -lb. bots., 3/6; 1-lb. bots., 6/6.

Liquor Hydrastis. Medium Dose—10 minims.

This Liquor is standardized to four times the strength of the British Pharmacopœia Tincture.

$\frac{1}{2}$ -lb. bots., 3/6; 1-lb. bots., 6/6.

Liquor Podophylli. Medium Dose—10 minims.

This Liquor is standardized to four times the strength of the British Pharmacopœia Tincture.

$\frac{1}{2}$ -lb. bots., 4/6; 1-lb. bots., 8/-.

Liquor Nucis Vomicae. Medium Dose—2 minims.

This Liquor is standardized to eight times the strength of the British Pharmacopœia Tincture.

$\frac{1}{2}$ -lb. bots., 4/6; 1-lb. bots., 8/-.

Liquor Strophanthi. Medium Dose—2 minims.

This Liquor is standardized to four times the strength of the British Pharmacopœia Tincture.

$\frac{1}{2}$ -lb. bots., 5/6; 1-lb. bots., 10/-.

Liquor Hemidesmi. Dose—10 to 20 minims.

One volume added to seven volumes of Syrup forms Syr. Hemidesmi.

$\frac{1}{2}$ -lb. bots., 2/3; 1-lb. bots., 4/-.

Liquor Pruni Virg. Medium Dose—10 minims.

One volume added to seven volumes of Syrup forms Syr. Pruni Virgin.

$\frac{1}{2}$ -lb. bots., 2/3; 1-lb. bots., 4/-.

Liquor Rosæ Gallicæ. Medium Dose—10 minims.

One volume added to seven volumes of Syrup forms Syr. Rosæ Gallicæ, B.P.

$\frac{1}{2}$ -lb. bots., 2/3; 1-lb. bots., 4/-.

Liquor Pepsinæ.

Ten minims of this Liquor, mixed with eight ounces of Distilled Water, and thirty minims of Hydrochloric Acid, will completely dissolve 1,000 grains coagulated Albumen in four hours, at a temperature of about 120° F.

A fluid ounce diluted with Sherry to one pint forms Vin. Pepsinæ.

$\frac{1}{2}$ -lb. bots., 4/6; 1-lb. bots., 8/-.

Aqua Anethi Conc.

One volume diluted with Distilled Water to forty volumes, forms Aqua Anethi B.P.

$\frac{1}{2}$ -lb. bots., 2/3; 1-lb. bots., 4/-.

Aqua Anisi Conc.

One volume diluted with Distilled Water to forty volumes, forms Aqua Anisi B.P.

$\frac{1}{2}$ -lb. bots., 2/3; 1-lb. bots., 4/-.

Aqua Carui Conc.

One volume diluted with Distilled Water to forty volumes, forms Aqua Carui B.P.

$\frac{1}{2}$ -lb. bots., 2/3; 1-lb. bots., 4/-.

Aqua Chloroformi Conc.

One volume diluted with Distilled Water to forty volumes, forms Aqua Chloroformi B.P.

$\frac{1}{2}$ -lb. bots., 2/9; 1-lb. bots., 5/-.

Aqua Cinnamoni Conc.

One volume diluted with Distilled Water to forty volumes, forms Aqua Cinnamoni B.P.

$\frac{1}{2}$ -lb. bots., 2/3; 1-lb. bots., 4/-.

Aqua Menth. Pip. Conc.

One volume diluted with Distilled Water to forty volumes, forms Aqua Menth. Pip. B.P.

$\frac{1}{2}$ -lb. bots., 2/3; 1-lb. bots., 4/-.

Fletcher, Fletcher & Stevenson, Manufacturing Chemists.
 Office: 21 Mincing Lane, E.C. Works: Holloway, London, N.

Prize Competition

We have decided to offer for competition a Prize of

Ten Guineas

for the best Specimens of the following

SIX MIXTURES

for the relief of common ailments, prepared from

Fletchers' Concentrated Liquors

1. A COUGH MIXTURE.

2. A DIARRHŒA MIXTURE.

3. A FEBRIFUGE MIXTURE.

4. AN INDIGESTION MIXTURE.

5. A LIVER MIXTURE.

6. A TONIC MIXTURE.

The Editor of "The Chemist and Druggist" has kindly consented to nominate an experienced Pharmacist and a Member of the Medical Profession, who will act as Adjudicators.

COMPETITORS MUST COMPLY WITH THE FOLLOWING RULES:—

1. A two-ounce specimen of each Mixture, together with the formula of same, must be forwarded, *securely packed and carriage paid*, before the 31st August, addressed as follows:—"FLETCHERS' CONCENTRATED LIQUORS—Prize Competition. The Adjudicators, c/o The Editor, 'The Chemist and Druggist,' 42 Cannon Street, London, E.C."
2. No Mixture must contain more than two ingredients other than our CONCENTRATED LIQUORS or CONCENTRATED WATERS, and Aq. Dest.
3. The CONCENTRATED LIQUORS and WATERS which may be used in this competition are those described in the last edition of "Memorabilia," together with the additions enumerated on the opposite page.
4. The dose of any Mixture must not be less than one fluid drachm, nor more than four fluid drachms.
5. Each competitor must attach a *nom de plume* to his formulæ and specimens, but his name and address must NOT appear thereon, nor upon any portion of the package or its contents.
6. On the same day that the specimens are forwarded a letter must be posted to us giving the real name and address of the competitor, together with his *nom de plume*, and enclosing Invoice of the CONCENTRATED LIQUORS used in the competition.
7. Competitors may send in one or more of the Six Mixtures, and the judges will select the BEST MIXTURE IN EACH CLASS. They will have entire discretion in the allotment or division of the prize.
8. The result of the competition will be announced in "The Chemist and Druggist" as soon as the judges have made their award.
9. We reserve the right to make use of any formulæ submitted. Competitors should aim at producing Mixtures which are EFFICACIOUS, ELEGANT, AGREEABLE, and INEXPENSIVE.

COD LIVER OIL MANUFACTORIES—
LONGVA & KJERSTAD, NORWAY.

DEPÔT FOR AUSTRALIA—
484 COLLINS STREET, MELBOURNE.

Allen & Hanburys'

COD-LIVER OIL.

This Oil is pale, limpid, and of delicate flavour, maintaining its brilliancy at 32° F. The demand for ALLEN & HANBURY'S Oil, steadily increasing as it does year by year, affords gratifying evidence that the care and skill with which it is prepared are appreciated, whilst the fact of their being actual manufacturers (by far the oldest English producers of Cod-liver Oil in Norway) enables them to guarantee its genuineness, and to offer it on advantageous terms, either bottled or in bulk. Prices on application.

THE "PERFECTED" COD-LIVER OIL

Is prepared by an entirely distinct process, which renders it free from all unpleasant qualities, without impairing in the smallest degree its invaluable medicinal and nutritive properties. It can be borne and digested by the most delicate, and is the only oil which does not "repeat." Sold *only* in capsuled bottles as ALLEN & HANBURY'S own speciality, each label bearing their signature.

THE "PERFECTED" COD-LIVER OIL EMULSION WITH THE HYPOPHOSPHITES OF LIME AND SODA.

The *Lancet* writes:—"Quite tasteless as regards Cod-liver Oil. Possesses a very agreeable flavour."

The *British Medical Journal* writes:—"An excellent preparation. . . . Can be readily taken by the most fastidious palate."

Sold only in capsuled bottles, sizes and prices the same as those of the "Perfected" Cod-liver Oil.

N.B.—A very similar preparation is supplied to the trade, either bottled or in bulk, for Chemists to put up as their own speciality. Samples and prices on application.

CASTOR OIL (ALLEN & HANBURY'S Tasteless).

This oil is supplied in bottles, bearing A. & H.'s name and trade-mark; also in bulk. Prices on application.

The *Lancet* writes:—"Messrs. ALLEN & HANBURY'S have recently introduced a variety of Castor Oil which seems likely to supersede the old-fashioned form with which we are all so familiar. Their 'Tasteless' Castor Oil is absolutely pure, is almost colourless, and is as free from disagreeable taste or smell as anything of the nature of oil can be. We have given it an extensive trial, and find that it is taken both by children and adults without the slightest difficulty, whilst its aperient effects are unquestionable. It possesses all the advantages that are claimed for it."

The *British Medical Journal* writes:—"Although absolutely pure Castor Oil, it is so prepared as to be entirely devoid of smell, and to have none of the disagreeable flavour which characterises the ordinary varieties of this oil. It possesses full aperient properties."

BLEACHED (but *not rancid*) ALMOND, OLIVE, & NUT OILS.

These will be found specially worthy the attention of Chemists, and are useful for many purposes. Samples and prices on application.

REFINED COCOANUT OIL

Of extra fine quality. Samples and prices on application.

CHRISMA

Is a pure and perfectly neutral solid hydrocarbon obtained from Crude Petroleum, devoid of smell and taste. It is of about the consistence of lard, and cannot become rancid. Samples and prices on application.

CHRISMA SULPHURIS.

This, unlike the B.P. ointment, is a *Solution* of Sulphur in Chrisma, and is therefore more effective, especially as a *Parasiticide*; and is neither irritating, offensive, nor unsightly. Samples and prices on application.

WHITE CHRISMA,

A very elegant preparation, bright and colourless, and entirely free from smell and taste. Samples and prices on application.

CHRISMALINE,

A pure, neutral, fluid hydrocarbon, devoid of smell and taste.

ALLEN & HANBURY'S, BETHNAL GREEN, LONDON, E.

Other Important Specialities

MANUFACTURED BY

ALLEN & HANBURY'S.

BYNIN.—A very active and concentrated *fluid* Malt Extract. In bottles at 1/9 and 3/- each. "A most valuable preparation."—*Lancet*.

BYNOL.—The "Perfected" Malt and Oil. *Both* ingredients are of ALLEN & HANBURY'S own manufacture, and are in a state of the most intimate combination attainable. It is conveniently put up in wide-mouthed jars at 2/- and 3/6 each.

BYNO-HYPOPHOSPHITES.—A neutral solution of the Hypophosphites of Iron, Calcium, Potassium, and Manganese, and the Alkaloids of Cinchona and Nux Vomica in combination with Bynin, Liquid Malt. One ounce contains about 1/40th grain of Strychnine. More agreeable to take and valuable as a tonic than the popular (sugar) syrups so largely prescribed. In Bottles at 2/6 and 4/6 each.

CAFÉ VIERGE, a highly concentrated essence of pure coffee. Price 1/3 per bottle.

EFFERVESCING SALINE.—A fine granulated preparation which, in dissolving, produces a sustained, sparkling effervescence and clear solution. In bottles at 1/6 each, and in bulk. Samples and quotations on application.

INFANTS' FOODS.—No. 1. "First Food for Infants," in Jars at 1/9 each. For use from birth to three months of age
" " No. 2. "Mother's Milk Food," in Jars at 1/9 and 3/-. For use from either birth or three months of age to seven months.

" " No. 3. "Malted Food," in tins at 6d., 1/-, 2/-, 5/-, and 10/-. Surprisingly beneficial results have attended the use of this well-known food, which, when mixed with milk and made as directed, affords a perfect food for infants of six months old and upwards, and is often used with great success for quite young infants. Nos. 1 and 2 are complete in themselves, requiring only the addition of water. Descriptive leaflet on application.

"**HYPODERM**" is the name we have applied to our Compressed Tabellæ of Drugs for Hypodermic administration for the sake of convenience and facility in prescribing. Our "**HYPODERMS**," in addition to exactness of dose and extreme portability, possess the great advantage of *rapidly* dissolving without heat or trituration. Supplied in Tubes at 10/- per dozen tubes. Detailed list of "Hypoderms," Hypodermic Syringes, and aluminium and leather cases supplied on application.

JUJUBES & PASTILLES, including Glycerine, Black Currant, Delectable, Magnum Bonum, Tamarind, Voice, &c. Sold in boxes at 6d. and 1/- each. Also in bulk. Superior to any in the Market.

LOZENGES of all kinds in tins at 1/- each. Also in bulk.

MALT EXTRACT, in wide-mouthed jars, at 1/6 and 2/6 each. Also in bulk.

MALT EXTRACT, Fluid. Supplied in bottles or bulk. Samples and prices on application.

MALT EXTRACT WITH COD-LIVER OIL is supplied in bottles, with or without labels and cartons, or in bulk. Samples and prices on application.

MEDICATED THROAT PASTILLES, having as their base Pâté de Jujube, and made in over 40 varieties. A list of formulæ on application. In tins at 1/- each, and in 1-lb. bottles. Among the more popular may be mentioned:—

No. 4. Compound Morphia and Ipecacuanha (Expectorant).

No. 29. Compound Rhatany.

No. 31. Red Gum and Cocaine.

No. 38. Cocaine, Chlorate of Potash, and Borax.

PAGE'S VAPORIZER & CRESOLENE, the specific for Whooping Cough, Asthma, Catarrh, Croup, Diphtheria, Hay Fever, &c., and for disinfecting purposes in Scarlet Fever, Small Pox, Measles, &c., its fumes pervading the air and entering every crevice. Prices and handbills for distribution on application.

SACCHARIN.—Supplied as *Tabellæ*, in bottles at 9d., 2/-, and 4/-; or *Soluble* (Salt) at 1/-, 2/4, and 4/6. Also in bulk.

SALIPYRIN (Riedel).—ALLEN & HANBURY'S have been appointed Sole Agents for the United Kingdom for this chemical product manufactured by Mr. Riedel, of Berlin. It combines the antipyretic and analgesic properties of the Salicylates and of Phenazone B. P. (better known as Antipyrin). In Germany Salipyrin is coming into extensive use. Dr. Guttman, Dr. Hennig, Dr. Mosengeil, and others have made extensive trials of it, and have written largely upon it. They regard Salipyrin as almost a specific in Influenza, and free from the injurious action on the heart sometimes resulting from the use of Antipyrin, whilst its sudorific action is more moderate and less weakening than that of the Salicylates. In Rheumatism, both acute and chronic, Salipyrin was found to be especially valuable by the above-named authors.

A Pamphlet containing full information on Salipyrin sent on application.

Price 3/6 per oz., or 52/- per lb. **SALIPYRIN TABELLÆ** (disintegrating), 5 grains each, in bottles at (Retail) 1/-, 2/6, and 4/6. **SALIPYRIN CACHETS**, 10 grains in each, in boxes 2/6 (Retail), at 23/- per dozen boxes.

TABELLÆ.—Full list of ALLEN & HANBURY'S Compressed Medicines on application. All the more insoluble kinds are made to *rapidly disintegrate* on coming in contact with moisture. In bottles at 1/-, 2/6, and 4/6 each. Also in bulk.

ALLEN & HANBURY'S, BETHNAL GREEN, LONDON, E.

TONGA,

A SPECIFIC FOR

NEURALGIA.

TONGA

is the name given to a remarkable remedy for Neuralgia. It is a fluid Extract of a special combination of the Barks, Roots, and Leaves of several plants, the peculiar efficacy of which was discovered by a resident in the South Pacific, whilst seeking relief from intense Neuralgia. The drug was first introduced to us during the summer of 1879. On submitting it to a trial, it was at once found by competent medical authorities to possess extraordinary power in relieving Neuralgic pains. The following Extracts from papers in the *Lancet*, written by eminent medical men, will sufficiently testify to the great value of this remedy:—

"A woman, aged twenty-three, had suffered for fourteen days from severe neuralgia of the infra-orbital and great occipital nerves. She had four severe paroxysms in the day, lasting from half-an-hour to an hour-and-a-half. Many of her teeth were bad. Three doses cured her."

"A woman suffered from neuralgia in the left great occipital nerve. Four half-drachm doses cured her."

"A man, aged twenty-five, had suffered for a fortnight from severe bilateral neuralgia in the temples, in the eyes, and under the eyes. Half-a-drachm dose thrice daily cured him in three days."

"A woman, aged twenty, for ten days had suffered from severe neuralgia in the first and third branch of the fifth nerve. She had daily about five paroxysms, each lasting from one to two hours. A drachm thrice daily cured her in three days."

"A girl, aged eighteen, suffered from toothache and severe neuralgia along the lower jaw, and in front and behind the ear. Half-a-drachm cured the neuralgia in twenty-four hours."

"This remedy, whilst apparently highly useful in neuralgia, produces no toxic symptoms."—From a Paper by **SYDNEY RINGER, M.D.**, and **WILLIAM MURRELL, M.D., M.R.C.P.**, in the *Lancet*.

"The results obtained from Tonga by Drs. Ringer and Murrell fully coincide with mine. I have notes of cases of brain and kidney disease in which Tonga alone succeeded in removing pain. All cases of neuralgia (supra and infra orbital branches of the fifth nerve), with swelling of the temporal veins during the attack, were benefited." From a Paper by **C. BADER, Esq.**, Ophthalmic Surgeon to Guy's Hospital, in the *Lancet*.

"W. H.—, aged thirty-one, had been suffering from most severe neuralgia for nearly ten days. The teeth, both in the upper and lower jaw, were in a very decayed condition. One teaspoonful of Tonga was ordered to be taken every six hours till the pain was relieved. The paroxysms entirely ceased after the fourth dose."

"A woman, aged twenty-nine, in a very weak, anæmic state, with inflamed axillary glands, had suffered from supra-orbital neuralgia for six or seven days. She was ordered one teaspoonful three times a day. The paroxysms ceased, and did not return, after the fifth dose had been taken."

"Wm. P.—, aged thirty-two, had suffered greatly from neuralgia for nearly two years. He was ordered one teaspoonful in water three times a day. The pain very much decreased after the fourth dose, and entirely ceased after the sixth dose had been taken. In my case-book I find the following note on April 15th on this case:—'Had another bad attack, though less severe than the last. The neuralgic pain entirely disappeared after the third dose.'" From a Paper by **W. J. H. LUSH, M.D., F.R.C.P. Ed., M.R.C.S.E., &c.**, in the *Lancet*.

"Tonga maintains its reputation in the treatment of neuralgia."—*The Lancet*.

"Invaluable in facial neuralgia."—*Medical Press and Circular*.

"Has proved effective in all those cases of facial neuralgia in which we have prescribed it. It is an elegant and easily-taken remedy."—*Medical Press and Circular*.

Extract from a Letter in the *British Medical Journal*.

"After trying quinine, arsenic, iron, morphia, and the pills above mentioned (gelsemium, croton-chloralhydrate, and monobromide of camphor), Tonga was used, and the effect was almost instantaneous. I am, &c., **KENNETH W. MILLICAN, B.A., L.R.C.P. Ed.**"

We have also had further overwhelming testimony, both from the Medical Profession and the Public, of the remarkable efficacy of **TONGA**. It is, in short, what it professes to be—"A SPECIFIC FOR NEURALGIA."

G. W. WIGNER, Esq., F.I.C., F.C.S. writes:—"Gentlemen, I have tried Tonga myself for neuralgia and acute rheumatism with perfect success in each case. I have given it away in fourteen other cases, and have enquired carefully as to the results. It has succeeded in every case, and a third dose has but seldom been required. (Signed) **G. W. WIGNER.**"

Captain **H. PADDON**, Hounslow, to —, Esq., Bickley:—"Some time ago you very kindly gave me a remedy for neuralgia (Tonga), and I have intended to write to you as to its value, and now do so. It stopped an attack of neuralgia, to my astonishment, when in full progress, and is the only remedy I have ever tried that would do it. (Signed) **H. PADDON.**"

TONGA, unlike Opium and other anodynes, produces its remarkable specific action on the nerves without giving rise to any derangement of the digestive or other organs.

DOSE.—A Teaspoonful in water three times a day. Relief generally follows the third or fourth dose.
N.B.—No ill effects follow from larger doses.

TONGA (which name is a Registered Trade Mark) is sold only in Bottles at 2s. 9d., 4s. 6d., and 11s. (28s. 46s., and 114s. per dozen), and may be obtained from any Patent Medicine House, or from the Sole Consignees and Manufacturers,

ALLEN & HANBURYS, BETHNAL GREEN, LONDON, E.

DRUGGISTS' SUNDRIES

We beg again to call the attention of the Trade to the above department of our business, which has so rapidly increased as to necessitate constant enlargement of our premises. We guarantee quality of all our goods, and all articles of Best Quality bear our Trade Mark as above. The word "Savars" is also registered as a Trade Mark.

Our Price Lists are most complete, and are supplied (as also are our goods) **TO REGISTERED CHEMISTS AND DRUGGISTS ONLY.**

"CONCILIO ET LABORE."

THE MANCHESTER COLLEGE OF CHEMISTRY AND PHARMACY,

225a & 227a OXFORD STREET, MANCHESTER.

ESTABLISHED 1877.

MANCHESTER 1882.

Directors—Mr. W. SPENCER TURNER and Mr. CHARLES TURNER, F.C.S., Pharmaceutical Chemists.

The extensive premises of the Manchester College of Pharmacy include Three Laboratories, a Dispensary, and Pharmaceutical Laboratory, Two Museums, and Three Class Rooms, all provided with every requisite for the practical and theoretical study of the many arts and sciences included in the education of the modern pharmacist. The system employed by the Directors is not one that they learnt at another school, but is a complete combination of Lecture, Demonstration, and Class work, with a carefully superintended course of practical work in all the subjects, by which they ensure to every diligent student a THOROUGH and SUCCESSFUL knowledge of his work.

It must be remembered that Mr. W. SPENCER TURNER'S reputation as a teacher of the subjects required in the Minor and Major is no fungoid of parasitic growth, but was made by his own hard work before he came to Manchester, and that Mr. CHARLES TURNER, although excellently fitted by education and practical experience for the post he holds, was not invited to take it till the middle of March, 1890; and those who have noticed recent events can quite understand that the successes the Manchester College of Pharmacy men have obtained since then, and the thorough character of the work now done there, are due quite as much to his energy and complete knowledge of the subjects he teaches as they are to his brother's experience.

In publishing the following pass lists the Directors desire to tender their special thanks to all past and present students who have helped to obtain such good results by their steady work, kind encouragement, and strong recommendation, in spite of attempted parasitism. They trust in the future to obtain still greater success by maintaining their policy of orderly progress, availing themselves to the fullest degree of the facilities which recent advances in Pharmaceutical science have placed at their disposal.

Bolsover, Saeffield	Mr. A. Mercer, Stockport	Mr. J. Riding, Preston

NOTE ON FEES.

The fees for the various sets of Major Classes remain unchanged.

In the Minor Classes the fees for the Short-Time courses are not altered; but liberal reductions are made to students who are willing to allow themselves a longer period of attendance, by which they can attain that proficiency in scientific work which the Directors have always advocated, and for promoting which the present is an admirable opportunity. Therefore, the fee for a year's attendance at the Afternoon or Evening Classes is reduced from £8 8s. to £6 6s., and that for the Once-a-Week Class from £5 12s. to £4 10s.—junior students paying reduced fee as at present.

In the Full-Time Minor Class, the fee of £9 9s. for the three-and-a-half months' course is not changed (the fee from September 1st to the January Examination is £10 10s., and to February £12 12s.), but students moving into that class from the Local ones pay reduced fee, and Full-Time students joining for or remaining for a longer time than this also pay much lower fees.

ESTABLISHED 1882.

INCORPORATED 1888.

THE CITY SCHOOL OF CHEMISTRY AND PHARMACY, LIMITED,

27 CHANCERY LANE, LONDON, W.C.

This School is the most successful of all the Pharmaceutical Schools in Great Britain. We append a few reasons why, and compare with other Schools.

AT THE CITY SCHOOL.

(1) Our fees are inclusive—*i.e.*, we supply the student free and ungrudgingly with Apparatus, Opium, Cinchona Bark, Alkaloids, Alcohol, Chloroform, Ether, Nitrate of Silver, and other expensive reagents; also with all Drugs and Chemicals for Practical Pharmacy and Dispensing.

(2) The cost of living in this central and salubrious district is below other parts of London—*i.e.*, men can live for 17s. 6d. per week, which includes Board, Lodging, Washing, and Attendance, and a large number of our students pass the Minor and Major for £50, this amount including School and Examination Fees, and Living.

We invite Students to inspect our Laboratories and learn our arrangements before they enter elsewhere.

AT OTHER SCHOOLS.

(1) The so-called inclusive fee covers common reagents only. Students have to pay for Apparatus and all expensive Chemicals and Drugs used in Practical Chemistry, Pharmacy, and Dispensing, necessitating a large outlay which often causes the students to scamp the work, and the blame of incompetency devolving upon themselves instead of upon the proprietors.

(2) The longer period required, extras, cost of living and travelling expenses incurred when a student wishes to visit the Pharmaceutical Museum, Botanical Gardens, and other central scientific institutions make it impossible to acquire both Minor and Major under £100.

The course for the October Examination will commence on August 2nd. so as to give Students a full three months' course. We are now rapidly filling up the benches then becoming vacant, and intending pupils should enter at once. An extended course of Lectures, &c., for the January Examination will commence on September 5th. Fee £10 10s. inclusive.

Full particulars and Prospectus post free on application to

MAURICE WILLIAMS, Managing Director,
OR TO
REGINALD HARRISON, Secretary,
27 Chancery Lane, London, W.C.

WESTMINSTER COLLEGE

TRINITY SQUARE, BOROUGH, LONDON, S.E.

The largest and most Successful Pharmaceutical School in Great Britain.

The next Course of Lectures, &c., will be commenced on August 2. Fee until the October Exam., £8 8s.; January £12 12s.; until qualified, £15 15s. This fee includes all books, apparatus, &c., there being no extras of any kind.

PRELIMINARY.—3 months, £3 3s.; Until passed £5 5s.

EVENING CLASSES

For the Pharmaceutical Exams. are held every Tuesday, Wednesday, and Thursday, 7 till 9.

FEES:—3 months	MAJOR	...	...	...	£1 11 6
	MINOR	...	...	...	1 1 0
	PRELIMINARY	...	...	...	0 15 0

FREE TUITION.

WILLS' UNIVERSAL POSTAL SYSTEM.

APPRENTICES are advised to enter for a two or three years' course, and thus form a good foundation of knowledge.

"Those who cannot attend a school of pharmacy will find 'Wills' Universal Postal System' train them in a way they should go."—*Chemist and Druggist*.

"Mr. Wills, of Westminster College, one of our most thoroughly successful tutors, extends him a helping hand, leaving it simply his own fault, and deserving it, if he blindly labours on in ignorant darkness."—*Magazine of Chemistry*.

For full particulars apply to E. WALDEN, Secretary.

NORTHERN SCHOOL

OF PHARMACY,

100 Burlington St., MANCHESTER.

PRINCIPAL—MR. GEORGE CLAYTON, PH.C.

The next Full Term will commence on WEDNESDAY, AUGUST 31st, and will comprise two courses—one for advanced men who wish to present themselves for examination in October next, and also a full course for Minor and Major students who wish to prepare for the January examinations. Gentlemen who intend to join either of the above courses are advised to secure benches by sending in their names as early as possible.

Prospectus and full particulars will be sent on application to the Principal.

JUST PUBLISHED. 200 pp., Crown 8vo. 3s. 6d.

INDIGESTION

A Manual of the Diagnosis and Modern Treatment of the different varieties of Dyspepsia.

By GEO. HERSCHELL, M.D., LOND.

"Any work of this character must stand comparison with a number of able monographs either in English, French, or German. We think Dr. Herschell's book will compare favourably with any of these."—*Therapeutic Gazette*, Jan., 1892.

(Mr. Van Voorst's Successors.)

Parcel Post Trade.

You really have two sets of customers. The first is your shop trade, which can never be larger than a radius of a few miles. The second is your Parcel Post trade, which is unlimited in size.

Parcel Post profits are large, but the Parcel Post trade can only be established by issuing intelligent and interesting announcements in the profitable newspapers and magazines of the country, or a persuasive pamphlet, a live, readable little book, novel in appearance and carefully prepared.

I do this work for some of the largest houses in the United Kingdom. It costs no more and you save your own time; the new business from such methods easily pays its entire cost. Write me about it.

CATALOGUE

POST
FREE.**'OPTIMUS' RAPID EURYScope.**

The Aperture is F/6. The Lenses are of Special Optical Glass, constructed with the nicest precision of curvature, so maintaining good marginal definition, coupled with the most extreme rapidity.

To cover 5x4 7x5 8x5 9x7 10x8 12x10
63/- 94/6 110/- 126/- 220/- 390/-

**'OPTIMUS' WIDE-ANGLE EURYScope.**

(Double) F/9.50. This aperture is exceedingly open for wide-angle work. The definition, however, is in no way sacrificed, as the curvatures are most perfectly accurate, and the minute detail in architectural and interior subjects is rendered with the maximum of crispness and a total absence of distortion.

To cover.. 5x4 7x5 9x7 10x8 12x10
63/- 94/6 126/- 220/- 390/-

**'OPTIMUS' RAPID RECTILINEAR.**

F/8. Second only to the above for Rapidity, therefore well suited for instantaneous effects, outdoor groups and views, as well as interiors. Copying and enlarging are also within the capabilities of this lens—in fact, its work may be styled UNIVERSAL.

5 6 7 8 9 10 11 12
33/- 45/- 49/6 64/- 82/6 127/6 142/6 180/- 225/-

**'OPTIMUS' WIDE-ANGLE SYMMETRICAL.**

Works F/16. Specially adapted for Architecture. Can be used to advantage when very close to the subject.

5 6 7 8 9 10 11 12
39/- 52/6 82/6 127/6 142/6 180/- 225/-

'OPTIMUS' STEREOSCOPIC LENSES.

Sold in Pairs, accurately matched. Giving brilliant definition, and covering $\frac{3}{4}$ by $\frac{3}{4}$ perfectly.

Rapid Rectilinear Aperture F8.. .. per pair 80/-
Rapid EuryScope F6.. .. 120/-

The above are recommended for either Stereoscopic Slides or Lantern Transparencies, being of short focus and fairly wide angle, they include a very comprehensive field. The Optical qualities are such that the resulting pictures will bear almost unlimited enlargement.

'OPTIMUS' WIDE-ANGLE CAMERA (LONG FOCUS).

Price, including 3 Double Dark Slides.

4 1/2 x 3 1/4 6 1/2 x 4 1/2 8 1/2 x 6 1/2 10 x 8 12 x 10 15 x 12
140/- 166/- 188/- 235/- 288/- 350/-

'This instrument possesses every possible advantage, being very light, very rigid, and very portable. The focussing screen and body may be brought towards the front of baseboard so as to prevent obstruction when using lenses of wide angular aperture and short focus.'—*Invention.*

RAYMENT'S PATENT CAMERA (LONG FOCUS).

Price includes 3 Double Dark Slides.

4 1/2 x 3 1/4 6 1/2 x 4 1/2 8 1/2 x 6 1/2 10 x 8 12 x 10 15 x 12
130/- 145/- 168/- 212/- 258/- 304/-

'The "Rayment" Camera in particular claims attention both for its BEAUTY OF WORKMANSHIP and for the EASE and READINESS with which it can be put into action.'—*The Camera.*

'OPTIMUS' CAMERA (LONG FOCUS).

Price includes 3 Double Dark Slides.

4 1/2 x 3 1/4 6 1/2 x 4 1/2 8 1/2 x 6 1/2 10 x 8 12 x 10 15 x 12
130/- 137/- 175/- 227/- 275/- 333/-

'I should strongly recommend Rayment's Camera. It is LIGHT, COMPACT, very RIGID, and extends to about double the usual focus.'—*A Amateur Photographer.*

'OPTIMUS' UBIQUE HAND CAMERA.

Pictures 4 1/4 by 3 1/4 in.

For use on Tripod or in hand.

Carries Six Dry Plates. Three Dark Slides. Focussing Screen, View Finder, Shutter, &c.

Price, with Rapid View Lens .. 55/-
" " Rectilinear .. 80/-
" " EuryScope .. 105/-

**'OPTIMUS' (PATENT) MINIMUS HAND CAMERA.**

Outside Dimensions, 8 by 3 1/2 by 5 in. For Plates 4 1/4 by 3 1/4.

This Camera has no Dark Slides, but carries Twelve Dry Plates. They place themselves consecutively before the Lens; each, after exposure, is removed to the back of the others by means of the little bag underneath the instrument. The register indicating the number of the plate offered for exposure renders it impossible for the same place to be twice exposed. It is provided with Focussing Adjustment and View Finder, also with a Curtain Shutter.

Price with 'Optimus' Rapid EuryScope 147/-

**'OPTIMUS' MAGAZINE HAND CAMERA.**

Pictures 4 1/4 by 3 1/4 in.

Carries Twelve Dry Plates. No Dark Slides. Plates changed by turning a Button.

With Rapid Rectilinear .. 126/-
" " EuryScope .. 147/-

**'OPTIMUS' DETECTIVE HAND CAMERA.**

The Shutter will give exposures of varied duration. The exactness in focussing is simple. The exterior is covered with leather, and measures 9 1/4 by 5 1/2 by 7 1/2. (Negatives 4 1/4 by 3 1/4.)

With Rapid Rectilinear Lens, F/8 .. 126/-
With Rapid EuryScope, F/6 .. 147/-

**'OPTIMUS' PHOTOGRAPHIC OUTFITS.**

**STRENGTH,
RAPIDITY,
AND
ACCURACY.**

**HICKS'S
LATEST PATENT**

The
Superintendent
of the Royal Kew
Observatory says:—

" Their manufacture is a piece of undoubtedly high-class glass-blowing, and I also think that the removal of the contraction of the glass stem, usually placed at about half-an-inch from the bulb, will tend greatly toward extending the average life of a thermometer by increasing its strength, independently of the fact that, with the diminished bulb, much less time is required now to register a patient's temperature, and so you will be conferring a very large benefit on the medical profession by its introduction to the world."

EVERY THERMOMETER OF THIS MAKE IS GUARANTEED TO REGISTER THE TEMPERATURE IN LESS THAN TWO MINUTES.
PRICE LIST ON APPLICATION.

SOLE PATENTEE AND MANUFACTURER—

JAMES J. HICKS, 8, 9, 10 Hatton Garden, LONDON, E.C.

**THE
"NON PLUS ULTRA"**

**CLINICAL
THERMOMETER.**

All other Thermometers have a contraction in the stem an inch above the bulb, and a chamber within which retains a part of the mercury. This is a defect, as it is a difficult matter to heat the mercury properly in this chamber, it being so far away from the bulb and mouth.

The "NON PLUS ULTRA" Thermometer has no chamber, and the constriction is right on top of the bulb itself.

Result—a truer temperature is taken, and in half the time; the scale is much more open and easy to read, as the divisions and figures are so much nearer the bulb.

It has greater strength, and the price is no higher!!!

NOW READY.

BLONDEAU ET CIE.

Inventors and Manufacturers of

Vinolia Soap *and Preparations.*

ENTRANCE TO ENGLISH OFFICES AND WAREHOUSE, RYLAND ROAD, LONDON.

WE take this opportunity of thanking our friends for their very cordial support, and of presenting them with a few illustrations, which will convey some idea of our Factories and Offices, the places where our goods are manufactured, and our central business is done.

For the sake of convenience our business may be classified under three heads:—1. The Factory and Laboratories; 2. The Advertising Department; 3. The General Office Department.

The "Vinolia" Soap Factory is situated at Malden Works, Malden Crescent, London, N.W., and is as complete a modern Soap Factory as can be found in Great Britain or elsewhere. On the ground floor, aside from the engine room—containing two 60 h.p. boilers and a 70 h.p. engine nominal—the space is reserved for milling, cutting, compressing and stamping machinery used for "Vinolia" Soap alone. Several views of the ground floor appear in these pages.

U.S.A. FACTORY AND OFFICES, 73-77, WATTS STREET, NEW YORK.

Next to the drying room on the same floor is a room for a milling machine, reserved for operations of a private nature conducted only by our chief soap maker. The remainder of the floor is reserved for the engineer's room, and a large "finishing room" for the tablets. (A corner of this with tablets on racks is reproduced on page 5.) Into the "finishing room" the tablets are brought from the ground floor after being stamped, and are here finished, and sent to the fourth floor for wrapping and boxing.

On the third floor is the pharmaceutical and analytical laboratory of our analyst, Mr. CHAS. THOMPSON, a Fellow of the Institute of Chemistry, and of the Chemical Society, who distinguished himself by original work on the subject of soaps before he came to us, and whose work is well known in the scientific world. In this laboratory all the products which we use in our manufactures are carefully examined and analysed as they come in, and considering the extent of our purchases there is, of course, considerable analytical work to be done.

Going to the second floor, we first enter on the left our chief soap-maker's laboratory, where are carried on by him and his assistants experiments, and examinations of products we buy as well as of those we send out. This laboratory consists of two departments—one for the chief soap-maker, and the other for his first assistant. It is supplied with the usual complete apparatus necessary for a scientific soap-maker, and effective provision for conducting steam from the very large waterbath up the chimney shaft. Next to the soap laboratories is the drying room, perhaps the largest of its kind.

Through this drying room a current of hot air is constantly passing, so that as the hot air becomes laden with the moisture from the soap and passes out, it is replaced by more hot air from below.

BOILER ROOM, VINOLIA SOAP WORKS, MALDEN CRESCENT.

ENGINE ROOM, MALDEN CRESCENT.

Nothing is used in our manufactures until it has been examined and found fully up to the highest standard, upon which we insist in the case of everything we buy. The importance of this will be apparent to anyone when it is borne in mind that in the case of one article alone, viz., Otto of Roses—we are, perhaps, the largest consumers in the world. We arrange for the very choicest Otto, pay a heavy price for it, and insist that it shall be up to the highest standard; the same is the case with everything else. Furthermore, samples of every batch of Vinolia Soap and

Preparations are critically examined in the Analytical Department before being sent out. This is the reason why we are able to scatter broadcast the most crucial tests for soaps. Our chief chemist has two assistants, both qualified pharmaceutical chemists, one a Bell Scholar and Perriea Medallist of the Pharmaceutical Society. Besides the analytical laboratories, there are on the third floor, our printing office (a small one for job work), "Vinolia Cream Department" 1 and 2, "Vinolia Powder Department," "Vinolia Dentifrice Department" and "the Mixing Department," "Vinolia Shaving Foam Department," &c. Views of some of these appear in these pages.

MILLING AND STAMPING DEPARTMENT, VINOLIA SOAP WORKS, MALDEN CRESCENT.

ANALYTICAL DEPARTMENT, "VINOLIA" SOAP WORKS,
MALDEN CRESCENT.

"VINOLIA" SHAVING FOAM DEPARTMENT.

"VINOLIA" CREAM DEPARTMENT.

MAKING "VINOLIA" DENTIFRICE.

MAKING "VINOLIA" POWDER.

CORNER OF THE TABLET FINISHING ROOM,
MALDEN CRESCENT.

Views of our general offices, advertising department, private offices, and a few departments of our warehouse, all of which are at our buildings in Ryland Road are given herewith, as well as the front entrance to the yard. We shall not speak specially concerning these departments, excepting a word or two concerning our advertising.

Our system of advertising is conducted differently from that of most large firms. We deal with

The fourth floor of the building is devoted entirely to the wrapping and boxing of goods, with the exception of a large room reserved for the storing of pamphlets, wrappers, boxes, paper, &c., used in doing up the goods. A large number of girls are always employed in boxing and wrapping "Vinolia" soap, powder, cream, tooth powder, pomade, lait, scents, &c. All the departments in this factory are in charge of thoroughly competent people, it being a principle with us in business to have none but the best. All engaged in the manufacture of our preparations (not including the soap) must have had a pharmaceutical training.

* * * * *

PERFUME LABORATORY, LONDON.

SOAP LABORATORY, LONDON.

all the prominent London advertising agents, instead of passing all our business through the hands of any one firm. Moreover, a great deal of our advertising is done by ourselves with the publishers direct. This is the case with the medical and trade journals and some of the larger periodicals, such as *Punch*, *Illustrated London News*, *Graphic*, *Lady's Pictorial*, &c. We require voucher-copies of every publication in which we advertise before it is passed for payment, and we never pay for any advertisements which

have not been ordered or which have not been inserted in strict accordance with the terms of an order. When it is borne in mind that we advertise in the prominent American medical and trade journals and magazines, and also in all the prominent publications in India, Australia and Africa, as well as in the medical and trade journals and the leading monthlies, weeklies, and dailies of Great Britain, not to speak of many Continental and South American publications in which our

SMALL PRINTING OFFICE

advertisements appear, it will be seen that we look well to maintaining the large demand for our goods. In this connection we may say that on the same day we may have a cablegram from North America, India, Australia and Africa. Every mail which comes from these countries brings us voucher-copies of advertisements, letters from our representatives or substantial orders, &c.

At the corner of Watts and Greenwich Streets, New York, U.S.A., are to be seen our American factory and offices. In that country we manufacture "Vinolia" Cream, Powder, &c., as we found such a course indispensable if

we would compete successfully with American manufacturers. Of course, manufacturing there enables us to carry on business with greater facilities than would otherwise be possible.

Some half dozen years ago, the name "Vinolia" was in the realm of the possible, but had not been spoken by any human tongue. Within that period we have succeeded in distributing "Vinolia" Preparations so generally that the English traveller is able to obtain them in any place in his own country, or the Colonies, or North America, and in the leading Continental and South American Cities. How has it been done? We answer—by thought, by work, by excellence. Our policy has been attacked, and yet, up to the present time, it has given general satisfaction to the trade; and in Great Britain we have put profits in the pockets of many a man which he would not have had had we adopted a *laissez faire* course. All the brain-work—the projecting of new business methods, coining names, solving of difficult pharmaceutical problems, systematizing and extension of our business—all this has been done by the principals, of whom there are two equal partners. We have enlisted in our service some of the best houses in the world, and the best talent that can be obtained in each department for which we require service—great artists, expert engravers, great art and other printers, celebrated distillers of essential oils, distinguished chemists, great paper manufacturers, boxmakers—indeed we might prolong the list almost indefinitely. Whatever our hands have found to do, we have done it with all our might. We have turned everything out the very best that we and those about us could. Our efforts have been crowned with success; whether that success is deserved, is another matter; any way, we have done our best.

"He who does his best does well—
Angels can no more."

BLONDEAU ET CIE.

WHILE the trade and public are now quite familiar with "VINOLIA" Soap, Cream and Powder, there may be one or more of our newest preparations which some friends here and there have read of, but not yet seen. To such, the *fac similes* of our goods will have an interest. In this connection, it may be excusable in us to lay stress on the unique character of our preparations, and the original way in which they are put up. The greatest compliments to us are the innumerable imitations of our goods, trade names, labels, boxes, advertisements and business methods. The cream-soaps now made by such a number of "honest men"—soap-makers—and sold by ethical chemists, is a case in point. These soaps are nothing more or less than imitations of the soap for which we took out a patent in Great Britain a few years ago. We have had imitators who expended very large sums in advertising, but inglorious failure has stamped them out. This is evidence to us that the *bonâ-fide* character of "Vinolia" preparations has made our business proof against inroads from empty-headed imitators.

We think we may fairly claim to have put the manufacture of toilet soaps upon a more scientific basis than it ever had before. Something more than the name of a soap on a fence is now required before the trade will recommend it. The information required is of this kind: What real evidence can you offer of excellence? Is your evidence such as can be bought? Until soap-makers can answer these questions satisfactorily they cannot cope with us, for our products are what they are represented to be, and the kind of evidence we adduce could not be obtained with any other soap we know of.

As to our newer preparations, the vases in which "Vinolia" Pomade and Lait "Vinolia" are supplied, are, we believe, without exception the most elegant that have ever been used for any pharmaceutical products in any country. Our new perfumes, "Vinolia" Bouquet, Mareuil and Jequilla are likewise superior articles.

Everything we use in the way of metal boxes and bottles is patented or registered, our labels being likewise registered. All infringements known to us have been dealt with in a summary way. We make a rule of having no parleying with our imitators, but hand them over to the solicitors without ceremony.

As to profit, it is not necessary for us to remind the trade that we have gone on the conviction that the labourer is worthy of his hire, and have so arranged that he can realize a fair living profit on "Vinolia" Soap and Preparations. When large demand, ready sales and profit are all taken into account, there is not a line of goods in the English market to compare with "Vinolia!"

TO THE PUBLIC.

ONE PENNY PER BOX.

i.e., 12/- Per Gross.

Each Box contains the following 2-page Leaflet, calculated to stimulate the public demand.

The Firm of F. ROSENTHAL & CO., 47, MINORIES, LONDON, E.,
Sole Manufacturers of Rosenthal's GOLD MEDAL STARCH,

WILL HAND THE SUM of £500 to the INFLUENTIAL COMMITTEE

(now in course of formation) of **BRITISH WOMEN** whose names
will be duly advertised in the principal newspapers,

For Raising The National Memorial to Grace Darling

in the shape of a Lifeboat, Ornamental Drinking Fountain, or any
other popular Foundation to be decided upon by the said Committee,

PROVIDED THAT 18 MILLIONS ☼ ☼
OF

'Grace Darling' Jubilee Memorial Starch Boxes

☼ ☼ ☼ **PRICE ONE PENNY EACH,**

To be had of every respectable Grocer and Dealer throughout the
United Kingdom and Colonies,

Are sold by the 20th October, 1892,

OR BEFORE THE CLOSE OF THE YEAR.

The number of these Penny Starch Boxes sold will be certified and guaranteed by a leading firm of Chartered Accountants, to be appointed by the said Committee; and should the number sold fall short of Eighteen Millions, the said firm of F. ROSENTHAL & Co. will hand over to the said Committee whatever sum shall be certified by the said Accountants to be the precise proportion, at the above rate, to the actual number of boxes sold. According to the last Government Census (April 5th, 1891), the total population of the United Kingdom was 37,740,283 (say 37¾ Millions), of which 19,421,126, say 19½ MILLIONS, WERE WOMEN AND GIRLS, therefore the quantity of boxes reckoned to be sold is reasonable.

**Let every Woman and Girl secure at least ONE of these pretty little Household Necessities,
and induce her friends to do likewise, and thus take her share—**

- 1.—In the National Memorial to the brave heroine of humble life, the devoted girl who honoured all British womanhood by her glorious deed.
- 2.—In the perpetuation of her memory in the hearts and minds of the growing generation of girls, by her true likeness, drawn from life (after the print in the British Museum), and the pictorial illustration of her deed and its history, accompanying each box.

Buyers can have quantities of these on application for separate distribution.

(Each one of you personally and jointly with your friends),

FOR RAISING A LASTING MEMORIAL TO

GRACE DARLING,

On the 20th October, 1892, the fiftieth Anniversary of her death,
OR BEFORE THE CLOSE OF THE YEAR.

Grace Darling Jubilee Memorial,

20th OCTOBER.

1842-1892.

20th OCTOBER.

ENGLAND'S NOBLEST
HEROINE,
"GRACE DARLING."

THE POPULAR
TRADE MARK OF
"Rosenthal's"
Gold Medal Starch

On the 20th of October, 1892, it will be just fifty years since one of England's noblest heroines fell quietly asleep. On the 20th of October, 1842, died Grace Horsley Darling, daughter of W. Darling, of the Outer Fern light-house. The circumstances which some fifty years ago made her name a household word wherever the English language was spoken are worth recalling at a time when, if anything is to be done to commemorate the jubilee of one of England's bravest daughters, the movement should be launched.

On the night of the 7th of September, 1838, the steamship *Forfarshire* became unmanageable, and struck with tremendous force on *Longstone Island*. A portion of the crew lowered a boat and left the ship. Some of the cabin passengers attempted to follow, but fell into the sea and were drowned. The cries of the survivors who remained on the vessel, which was rapidly being dashed to pieces, were borne across the waters, and at last attracted the attention of Grace Darling, the daughter of the Outer Fern light-house keeper. She called her father's attention to the sound, and at daybreak he launched his boat, but the gale was so tremendous that after hesitating for a time, he declared it would be certain death to go. After watching the wreck for some time, they made out that living beings were still clinging to it. Grace instantly seized an oar and leapt into the boat, calling to her father to follow. Impressed by the courage of his daughter, he did so, and the brave girl succeeded in hauling him on the rock. But the boat, a mere cobbie, would have been dashed to pieces had she stood by; so she rowed back into the awful abyss of

daughter, at the peril of their lives, at last succeeded in doing, and they finally brought the cobbie and its living freight safely to the *Longstone Island*.

During the whole of this time the storm raged with unabated fury, and it was almost by a miracle that Grace Darling succeeded in her daring enterprise. Her father himself afterwards confessed that but for Grace declaring that she would go off to the wreck alone, he should never have ventured to face what seemed to him certain death. The achievement was a glorious one, and the whole world rang with the humble heroine's name. Subscriptions were raised, and a sum of £700 was presented to her, and many were the offers made to advance her position in life. Grace Darling, however, refused to leave her "own people," and soon afterwards passed away in her little sea-girl home, surrounded by her humble friends. She died of consumption on the 20th of October, 1842.

Every school-child has heard the name of Grace Darling, but her deed lies now far back in the past, and some day it may be forgotten. I cannot help thinking that as the fiftieth anniversary of her death will be on the 20th October, 1892, it would be a fitting occasion to raise a national memorial to her. Kings and queens and mighty generals, the heroes of conquest and the heroes of slaughter, have everywhere their statues and memorials. Would it not be a wise and a graceful thing, if the nation found some means to perpetuate the memory of this brave heroine of humble life—the devoted English girl who honoured all English womanhood by her glorious deed? "DARLING."

Extract from the "Referee," 20th October, 1891.

CONCENTRATED

Soluble Essence of Lemon.

PRICE 7/- per lb-; 50 lbs. 6/9 per lb.; 100 lbs. 6/6 per lb.

~~~~~

We GUARANTEE this preparation to be DOUBLE THE STRENGTH of any of the different makes that are offered at prices ranging from 3/6 to 5/- per lb. It is 25 per cent. stronger than any so-called Concentrated Essences.

*Directions for Use:* USE ONLY ONE HALF the quantity required of any other make.

BY ITS USE YOU SAVE AT LEAST TEN PER CENT.

---

## **New Process. Sol. Ess. of Lemon. No. 2.**

This Essence is made by a New and Special Process, and is very much superior to the Ordinary Essence Lemon; in fact it comes nearer to our "CONCENTRATED" quality than any other on the Market. It is made from the Lemon Fruit, and produces a really First-class Beverage.

Price, 4/6 per lb. 50 lbs., 4/-.

---

## **FOAMINE. Highly Concentrated.**

.....

This preparation is specially made for the purpose of imparting a rich creamy head on Aërated and Fermented Beverages, and is giving the greatest satisfaction wherever used. It is stronger than any similar preparation, and is therefore the cheapest in actual use.

*Quarter of an Ounce is quite sufficient for One Gallon of Syrup.*

Price: 2/- per lb.; 20 lbs., 1/9 per lb.; 112 lbs., 1/6 per lb.

---

**BLACKBURN and GLASGOW.**

# MEADOWCROFTS' Patent STEAM FILLER.

For Codd's Bottles.

**The Strongest! Simplest! and Cheapest!**  
**Steam Filler on the Market.**

The toothed wheels are effectually guarded by strong cast-iron guard, not shown in engraving, and the Machine is fitted with a strong fixed bottle guard, covering the entire front and sides of wheel, in place of the automatic guard shown in the engraving. The new form of guard most effectually protects the bottler and surrounding workpeople, and is almost everlasting.

It is **not** necessary to place **this Machine** immediately under the driving shaft or against a wall. It can without the slightest inconvenience or risk be fixed in the middle of the works, as the pulleys and strap are high up and out of the way, and the bottles are so effectually guarded that there is no danger from bursting bottles.

## ADVANTAGES.

- Fills one bottle at once, and fills it perfectly.
- The filling and snifting is alternate, and effectually expels all atmospheric air.
- Absolutely impossible to waste syrup, &c., through omitting to supply the Machine with bottles.
- Syrup pump and aerated valves go entirely out of action when a bottle is missed.
- No straining of pump, &c., when saving syrup.
- Filling and snifting is specially arranged for both large and small bottles.
- Wearing parts are cast steel "tempered," and are almost everlasting.
- It is as simple as an ordinary turnover, and five times as strong.
- Stronger than any other Steam Filler, main shaft is solid gun-metal, 2-ins. diameter, and runs in two 2 ins. bearings.
- Weights about 5 cwts. (Hand Turnovers weigh about 1 cwt).
- Only one revolving joint, and that an extra strong one.
- Syrup pump is in full view, is easily regulated, and can be tightened up without pulling in pieces.
- Pulleys and strap high up and out of the way.
- Strap fork is reversible, and will suit any strap.
- Two of these Machines will do more and better work with two lads only than any other machine on the market, and cost less in the first instance.

**Price: £26 0 0 Nett Cash.**

COMPLETE WITH

**Extra Pump Barrel, Set of Spanners,  
and Duplicate Set of Springs.**

*Cost of Packing for Export with Carriage to Ship's side, and an extra supply of all Duplicates, averages about £4 os. od. extra.*

**BLACKBURN and GLASGOW.**

## They are Time & Labour Savers, therefore Money Savers.

They are **not** “jerry built,” with a bit of paper under one corner, and a piece of tin under another, so as to make them come in at a low price. Every face or joint is carefully and accurately turned, bored, planed, slotted, &c., by machinery, and all holes are drilled, not “cored” out. All this means time and money, but it also means that the Machine is a perfect one, and our customers say it is a pleasure to use them, and that they pay for themselves in one season.

The “Snifting” and Filling is so perfect that a saving of 25 per cent. of Gas is effected over the Hand Fillers, whilst the breakage is also reduced to the lowest possible point.

## BLACKBURN and GLASGOW.

## W. MEADOWCROFT & SON,

### CONCENTRATED SOLUBLE ESSENCE OF GINGER ALE.

THREE TIMES THE USUAL STRENGTH.

Price 7/6 per lb ; 50 lbs. 7/- per lb.

This Essence is acknowledged to be the **VERY BEST** for the purpose of flavouring Ginger Ale, &c. It imparts the flavour and aroma of the finest Ginger in combination with Lemon, Vanilla, Rose, &c., and produces a beverage with full, rich body, and equal in every respect to the well-known Belfast Ginger Ale.

Directions for Use:—Use 4 to 5 drams to each gallon of Syrup, with Acid, Foamine. and Colouring to suit.

### Concentrated Soluble Essence of Jamaica Ginger

This Essence being prepared from the finest selected Jamaica Ginger by a special process, imparts the true flavour and aroma of the Ginger-root, while at the same time it is both remarkably strong and perfectly soluble. For the preparation of Ginger Champagne, Ginger Beer &c., it has no equal; common consent pronounces it to be by far the best and cheapest Essence of Ginger ever offered to the trade

Guaranteed Pure and made from the finest Ginger only.

PRICE:—4/6 per lb.; 50 lbs., 4/- per lb.

### ESSENCE HOP ALE.

Double Strength.

This Essence, when used in the proportion of from  $\frac{1}{2}$  to  $\frac{3}{4}$  ounce to each gallon of Syrup, produces a fine tonic beverage, possessing the true Hop flavour and aroma, with a full body, and one which commands a large sale both summer and winter.

PRICE:—6/6 per lb.; 20 lbs., 6/- per lb.

### ESSENCE CHAMPAGNE CIDER.

This Essence is a blend of several of the most delicious flavours, and produces a beverage that cannot be equalled by any other Essence in the market. Use  $\frac{3}{4}$  ounce to each gallon of Syrup.

PRICE:—5/- per lb.; 20 lbs., 4/6 per lb.

### ANTI-FERMENTING SOLUTION.

We guarantee this preparation to effectually prevent fermentation of Syrups, Cordials, Aërated Beverages, &c. It prevents them from becoming thick and ropy, depositing, &c., and will keep them almost any length of time. Use from quarter to half-ounce to each gallon. Stir the Syrup briskly whilst adding the Solution.

PRICE:—5/- per lb.; 20 lbs., 4/9 per lb.

.....  
We make every other kind of Essence required in the Mineral Water Trade, and supply all Sundries

*INSTRUCTIONS FOR USING REFINED BICARBONATE OF SODA  
IN MAKING MINERAL WATERS.*

---

**PRODUCTION OF CARBONIC ACID GAS.**

**PROPORTIONS TO BE USED:**

1 cwt. Bicarbonate.

17 to 20 Gallons of Water.

$3\frac{3}{4}$  gallons (say 68 lbs.) Sulphuric Acid of 167 Twaddle.

**THE METHOD OF CHARGING** the Generator, and the running in of the Acid, is exactly the same as when Whiting or Marble is used: no agitation is required except at the very end of the charge. About 50% more bottles will be charged than with the same weight of Whiting.

A Generator capable of holding 1 cwt. of Whiting, 36 gallons of Water, and  $6\frac{1}{4}$  gallons (1 cwt.) of Acid can be charged with 2 cwt. Bicarb., 34 gallons of Water, and  $7\frac{1}{2}$  gallons ( $1\frac{1}{4}$  cwt.) of Acid. This will give three times as much Carbonic Acid Gas as is given by the Whiting process, and consequently three times as many bottles per charge, an immense advantage where space is limited and when business is brisk.

The proportion of water can be varied according to circumstances. With the above proportions the liquor from the Generator (which liquor is always perfectly clear and free from sediment), if run into tubs, or into crystallizing pans, will crystallize in about two hours at ordinary temperatures. The Crystals obtained are Glauber Salts, a readily saleable article, in place of the mud from Whiting, so disagreeable to handle, and so difficult to get rid of.

It will be seen from the proportions given above that only about *two-fifths* of the Acid and two-thirds of Bicarbonate (weight for weight, as compared with Whiting) are required to produce the same amount of Carbonic Acid Gas.

Mineral Water Manufacturers who use the above process might with advantage send their Glauber Salts to the firms who supply them with their Acid.

REFINERY BRISTOL

CONCENTRATED SOLUBLE ESSENCES  
FOR MINERAL WATER MAKERS.

These Essences, among others, are manufactured from the very best materials, and are arranged to suit the necessities of a high-class or a cheap quick trade. No expense or pains is spared in this branch of our manufacture, and we will readily give advice in any difficulty to our regular customers.

Our Essences and Extracts are very economical in use when compared with others. Directions for use are on each bottle or vessel.

We impress on our friends that quality is the only test of cheapness, though in price we are as low as any maker of repute.

Prof. G. H. SHARPE, F.C.S., London.—Analysis of Carter's Lemon Syrup.  
21 Great Tower Street, London, 29th December, 1891.—I hereby certify that I have made a very careful analysis of  
Lemon Syrup from Messrs. H. W. Carter & Co., and find it to contain, in a CONCENTRATED FORM, the flavour and aroma  
of the best Messina Lemons, but without any of its astringent properties. It is perfectly free from admixture with any-  
thing of an undesirable character, is entirely soluble in water, to which it imparts its characteristic virtues.  
Signed GRANVILLE H. SHARPE, F.C.S.

### Cantrell & Cochrane's AROMATIC GINGER ALE.

ENJOYING a reputation not confined to any quarter of the globe, the firm of C. & C. occupies the distinguished position of being able to defy all honest competition owing to the uniform excellence of their products. At least the knowledge that these manufacturers have been awarded THIRTY ONE Gold and Prize Medals at the various International Exhibitions, justifies the conclusion that fair and honest trading, the chief characteristic of the firm, has met its reward.

We note with pleasure that H.R.H. the Prince of Wales has ordered the waters of Messrs. CANTRELL & COCHRANE to be supplied to Marlborough House, and, as they are already Purveyors to Her Majesty's Houses of Parliament, the public may safely follow the lead of Royalty, backed up as it is by the recognition of the State.—*The Court Circular*, 12th September, 1885.

**CANTRELL & COCHRANE'S AROMATIC GINGER ALE** is one of the Purest and most Wholesome Drinks in existence, being equally suitable for warm or cold weather. It invigorates and promotes perspiration, and is a warm stomachic beverage, as sparkling and clear as champagne; has a most agreeable odour, is perfectly free from any intoxicating quality, besides being pleasant to the taste and possessing a delicious "bouquet." It has an advantage over all other drinks of the same kind, inasmuch as it does not deteriorate by being decanted into glass or other jugs, thus permitting the uncorking to be performed away from the table or ball-room without the beverage becoming flat or losing its effervescence; in fact, many consumers say it is vastly improved after it has been opened some hours. This innate freshness is the result of a process of manufacture, by which the carbonic acid gas becomes thoroughly incorporated with the liquid, and does not immediately escape on the removal of the cork. Twenty-two Gold and Prize Medals have been awarded CANTRELL & COCHRANE at the various International Exhibitions, held all over the world, for the Perfect Purity of their manufacture.—  
*Extract from A FRIEND TO TEMPERANCE.*

BEWARE OF SPURIOUS IMITATIONS, OF WHICH THERE ARE MANY.

## SUPERIOR LEMONADE.—

This well-known beverage needs no encomium, the manufacture of Messrs. CANTRELL & COCHRANE, being so long and so favourably known over the civilised world.

## SPARKLING MONTSEERAT

This unique beverage has been most favourably received both at home and abroad. With the pleasant acidity of the Lime Fruit, it combines an aromatic flavour, and that proper measure of sweetness which makes certain fruits so grateful to the palate, and so refreshing to the system.

## CLUB SODA WATER (Protected

by Registration) was originally prepared by Messrs. CANTRELL & COCHRANE for the use of Clubs, and has now become the favorite form of this popular beverage.

MANUFACTURERS BY HER MAJESTY'S ROYAL LETTERS PATENT

MANUFACTURERS BY SPECIAL APPOINTMENT TO HIS EXCELLENCY, THE LORD LIEUTENANT OF IRELAND

## SELTZER WATER.—This Aërated

Water, for the manufacture of which Messrs. CANTRELL & COCHRANE are so justly famous, combines the mildly alkaline and tonic saline properties of the genuine water of the Seltzer spring, with a full charge of carbonic acid, and presents them in the form of a most refreshing, exhilarating and restorative beverage, which may be taken in any quantity, as required. When a more decidedly alkaline water is required, their

## KALI or POTASS WATER will

be found to give the required property in a most agreeable and convenient form. In cases of Gout, Rheumatic Gout and Rheumatism, their

## LITHIA WATER has been pre-

scribed by the Medical Profession with most gratifying results. It is a most serviceable and palatable form of this valuable remedy.

Starbeck.

Highest Prize Medal.

BRADFORD, 1882.

This Association was started in 1878, to supply **Exclusively to Chemists and Hospitals** manufactured Mineral Waters of the highest class and of specified formula (the management of the Association being in the hands of Chemists, Medical Men can rely on the fact that the label justly described the contents of the Bottle or Syphon), we beg to hand you prices for same in Bottles and Syphons, and trust to be favoured with a sample order.

We beg to call your attention to the great success which has attended the Association during past years. There are now over *Two Thousand* Chemists (Shareholders) on the books, and dividends up to 10 per cent. have been paid.

These facts are significant proofs of the excellence of the Waters manufactured and of the satisfaction given to our Shareholders and their Customers. We, therefore, feel convinced it would be greatly to our mutual advantage were you to favour us with your trade.

We should also draw your attention to the following important features in connection with the Association:—

1. That none but Chemists (Shareholders) can purchase the Waters direct; consequently, when a Chemist has created a sale he cannot be undersold by Grocers; whereas, if he purchases from other manufacturers he will generally find that if he succeed in establishing a ready sale for *any* brand, the *same* waters will soon be found to be offered by Grocers, Wine Merchants, etc., in his locality.
2. That the Waters are acknowledged to be of the first and purest quality, being carefully filtered and passed through tin and silver-lined machinery, thereby preventing the possibility of any contamination whatever with injurious metals, which has been fully demonstrated by the fact of the Association having obtained the highest medals whenever they exhibited.
3. That the best Syphons, with tops manufactured from the purest tin (or silver-plated, if required), are used; also first-class ordinary Bottles, carefully wired and labelled, and corked with superior corks.
4. That all Natural Mineral Waters and Seltzogenes can be purchased through the Association at cheaper prices than from the general suppliers.
5. That the Association does not supply the *Trade* generally, but, as stated above, confines its sale *exclusively to Chemists and Hospitals*.

SUPPLIED TO HM THE QUEEN OF ENGLAND.

# Godes-berger.

HIGHEST AWARD

Facsimile of Label

UNDER ROYAL WARRANT.

on neck of each bottle.

HIGHEST AWARD

LONDON, 1891.

LONDON, 1891.

**G**ODES-BERGER is a natural sparkling Mineral Water, which flows from a spring of this name, situated near the Old Castle of Godesberg, opposite the Seven Mountains of the Rhine.

GODES-BERGER has been highly approved by HER MAJESTY THE QUEEN OF ENGLAND's Medical Advisers, also by numerous leading Physicians in London and throughout the world.

## PROFESSOR WANKLYN

writes on 24th July, 1891:

—"I have analysed the Godes-berger water, and find that it is EXQUISITELY PURE. Its saline ingredients are normal, just those required to form AN IDEAL TABLE WATER.

## DR. G. FINKELNBURG, Pro-

fessor and Member of the Imperial German Sanitary Office writes: "The Godes-berger Natural Mineral Water may, on account of its pleasant taste, and easiness of digestion, be continuously used as a Table Water, and is a refreshing and wholesome drink. It is to be HIGHLY RECOMMENDED.

## DR. BROCKHAUS writes: "I

prefer the Godes-berger Water ABOVE ALL MINERAL WATERS of a similar character.

*These are to Certify that I have appointed*

*Mrs. Eben Thomas Daniels  
and Alfred Will Macnaghten*

*into the Place and Quality of Purveyors of Godes-Berger  
Natural Mineral Water to Her Majesty.*

*To hold the said Place so long  
as shall seem fit to The Lord Steward for  
the time being. This Warrant is strictly  
personal and will become void on the Death,  
Retirement or Bankruptcy of the person  
named herein.*

*Given under my Hand this  
thirteenth day of June 1890 in the  
Fifty third Year of Her Majesty's Reign.*

*Mountbatten*

Lord Steward.

## Analysis made by Dr. REDWOOD,

Ph.D., F.I.C., F.C.S.,

Professor of Chemistry and  
Pharmacy to the Pharma-  
ceutical Society of Great  
Britain.

|                   | grains per gall |
|-------------------|-----------------|
| Carbonate of Soda | 47.60           |
| Sulphate of Soda  | 15.75           |
| " of Potassa      | 1.28            |
| Chloride of Soda  | 84.65           |
| Carbonate of Iron | traces          |
| " of Magnesia     | 23.14           |
| " of Lime         | 17.91           |
| Phosphates of "   | traces          |
| Siliceous Earth   | 0.70            |
| Carbonic Acid Gas | 270.72          |

From the analysis I have made, I consider Godes-berger to be a Water that is highly recommendable as a Table Water. Compared with other well-known Mineral Waters, I find Godes-berger much richer in its important ingredients, and, consequently, in my opinion, SUPERIOR TO ANY OTHER Table Water at present known to me. Being authorized by the Godes-berger Company to collect and analyse at any time, and at any place, samples of their natural Mineral Table Water, I am in a position to guarantee its maintained quality.

*Facsimile of Label*

UNDER ROYAL WARRANT.

*on neck of each bottle.*

HIGHEST AWARD

LONDON, 1891.

OPINIONS OF THE PRESS.

LONDON, 1891.

**THE LANCET** writes:—

- "It is a natural sparkling TABLE WATER, peculiarly soft to the palate."
- "It is free from organic matter."
- "It is an excellent drink with Milk."
- "It mixes well with Spirits."

**THE QUEEN** writes:—

- "It is deliciously clear and pure."
- "It is regularly supplied to her Majesty the Queen."

**THE BULLIONIST** writes:—

- "It is the most pleasant Mineral Water that we have ever tasted."
- "It is the only Natural Mineral Water for which a Royal warrant of appointment to Her Majesty has ever been granted."
- "It is familiar in the mouths of millions."

**HEALTH** writes:—

- "It is a water of absolute purity."
- "It is remarkably pleasant to taste."
- "It mixes well with Wines, Spirits, and Milk."

**THE COURT CIRCULAR** writes:—

- "The highest analytical authorities is overwhelming as to its superiority over other Table Waters."
- "It is entirely free from organic matter."
- "The most pleasant water of the many on the market."
- "Is of absolute purity."
- "Has no equal."

**VANITY FAIR** writes:—

- "It is particularly good for people whose digestions are not in first-rate order."
- "It is equally pleasant to take alone, or mixed with Spirits."
- "So much does the Queen like it that she habitually has it on her table."

**THE WHITEHALL REVIEW** writes:—

- "It is absolutely pure"
- "The most pleasant water to drink either alone or mixed with Wines or Spirits."
- "In every respect admirable."

**THE LADY'S PICTORIAL** writes:—

- "It is beautifully sparkling and pure."
- "It has been analysed and approved of by numerous leading physicians."
- "It cannot be too highly recommended."

**THE COURT JOURNAL** writes:—

- "It is the table water par excellence."
- "It is an ideal water containing unique natural properties."
- "It is as clear as crystal."
- "Is of absolute purity."
- "Most exhilarating."
- "Exceedingly pleasant to the palate."
- "Highly recommended by the most eminent authorities."
- "Constantly on the Royal Table."
- "Undoubtedly the best Table Water extant."

**THE GENTLEWOMAN** writes:

- "It is a most delightfully palatable and refreshing sparkling drink—whether taken alone or mixed with Wine, Spirits or Milk."
- "Specially beneficial to those subject to indigestion, gout, rheumatism and nervous weakness."
- "Analysed by leading Physicians whose reports on it are most favourable."

**THE CIVIL SERVICE GAZETTE** writes:—

- "It is wholesome and genuine."
- "It is pure, free from organic contamination."
- "Is invaluable to blend with Wines and Spirits."
- "Is the best and purest Table Water known."

| 12 in. x 10 in. | ...  | 5/4 |                 |      |     |

Other sizes to order.

The handle is placed in the centre, and the cup to the right of same—in the old type the handle is directly over the cup—the object being to prevent the scalding or steaming of the hand during the filling process. The cup is made of solid moulded rubber, and will not "wobble." The brass neck is quite flush with the bottom of the cup, thus making a perfect tundish of the funnel, and ensuring the prompt entrance of the water into the bottle. (See illustration of section of cup).

hand forceps, set of  
separable  $\frac{1}{4}$ ,  $\frac{1}{2}$  and 1 in.  
objectives, condenser  
and diaphragm,  
each 60/

## MILKING TUBES, Electro-plated.

Two sizes ... per doz. 6/ and 7/

## MIXERS, Baker's.

No. 1.

## MIXERS, Baker's—continued.

No. 1 is a convenient size for retail chemists; from 1 to 5 lbs. can be mixed and sifted in a few minutes, or when only a few ounces are required it is equally convenient. For dispensing prescriptions, &c., it entirely supersedes the use of pestle and mortar. For mixing and sifting a few ounces only, the machine is placed on a sheet of paper on the counter, instead of on the Receiver.

Machine with 2 Sieves (choice) and Receiving Box 13/  
Extra Sieves furnished if required, 3/ each.

No. 2.

This machine mixes from 3 to 7 lbs. at a time, and has a Receiver holding from 21 to 28 lbs. It is equally adapted for large or small quantities. When only a few ounces require to be done, it may be used *without the Receiver* in the same manner as No 1.

Machine with 1 Sieve (choice) and Receiving Box... 29/  
Extra Sieves when required, 4/ each.

No. 3.

No. 3 machine mixes from 14 to 28 lbs. at a time, and is provided with two drawers holding 30 lbs. each; several cwt. can be mixed and sifted in a short time when required; it is equally convenient for small

MIXERS, Baker's—*continued*.

quantities. This size is well adapted for whole-sale and large retail dealers, and is highly recommended.

Machine with Receiver, 1 Drawer and 1 Sieve (choice) 60/

Extra Sieves, 10/6 each. ... Extra Drawer, 4/9.

No. 3A.

The size of this machine is the same as No. 3, but it is provided with a hopper, a larger receiving drawer, flywheel and crank, thus increasing its capacity and rapidity of operation.

Machine with Receiver and one Sieve (choice) and Hopper ... .. £7 2s.  
Without Hopper... .. 9/6 less  
Extra Sieves ... .. 11/6 each

## “MAY-ROBERTS” WATER BATH,

REGISTERED.

This Water Bath will supply a long-felt want amongst Chemists and Perfumers, where small quantities of materials have to be dealt with.

The old form of Water Bath necessitates the use of a second vessel for pouring the melted Pomade Cream, or other substance, into the bottles or jars in which they are sold. In the “MAY-ROBERTS” Water Bath the earthenware bowl can be lifted out of the tin containing the boiling water, the process of cooling being thereby very much expedited, and the contents can be poured into the bottles or jars direct from the bowl. The Bath is also supplied with an earthenware cover.

**DR. JOHN HOOPER'S FEMALE PILL CO., LD.**

SPECIAL AGENTS—

**MAY, ROBERTS & CO.**

9 CLERKENWELL ROAD,

LONDON, ENG.,

*August, 1892.*

Our attention has been called to the fact that spurious Hooper's Pills have been sent abroad by some unprincipled persons in this country. We therefore warn Merchants and Wholesale Dealers that they should distinctly order **DR. JOHN HOOPER'S Female Pills**. The Genuine Pills are easily recognised by the name being printed thus:—

**DR. JOHN HOOPER**

in White Letters on the British Government Stamp which is round each box. This stamp is only supplied by the British Government to the original patentees. The boxes are again made up in parcels of one dozen, with a distinctive Wrapper calling the attention of Dealers to the Signature on the Stamp.

Should any difficulty occur in obtaining these well-known Pills please apply for price and terms to the

# SODA WATER MAKING

Foster's Patent.

WITH  
LIQUEFIED CARBONIC ACID GAS.

## THE No. 1 "COMPACT" MACHINE

Is specially designed for Chemists and Hospitals, and can be used for either Syphon, Ball-stoppered, Cork, or Screw-stoppered Bottles.

Producing capacity, by hand power, 60 dozens per hour.

**PRICE £60.**

Or, if fitted for steam power, 120 dozens per hour, with an extra filling machine.

## THE No. 2 "COMPACT" MACHINE

(AS SHOWN)

Made on the same principle, but smaller in its capacity.

Producing capacity, by hand, 30 dozens per hour.

**PRICE £48.**

Or, if fitted for steam, 60 dozens per hour, with an extra filling machine.

Iron Vessel containing an average of } 10s.  
28 lbs. by weight of Liquefied Gas } each.

And has sufficient Gas to manufacture about 18 gross of highly-charged Soda Water (10-oz. Bottles), or double the quantity of splits.

These Machines occupy little space, and are ready for use immediately! They require no fixing! Are self-contained and produce soda water, lemonade, &c., of the highest class and greatest purity.

The No. 1 Compact Soda Water Machine

PROTECTED  
BY 5  
PATENTS.

## THE PORTABLE CYLINDER

For Supplying the Fountains,

As here shown, is charged with plain Filtered Water while on the Rocker; the gas from the vessel is then slowly turned on, and the copper cylinder rocked backwards and forwards sharply so as to agitate or mix the water and gas together. When charged to the required pressure (about 110 lbs., shown by the pressure-gauge), it can be removed and placed under the counter and attached to the Fountain.

### PRICES.

Six-Gallon Tinned Copper Cylinder, £5 10 0.

Cast-iron Rocker, £1 2 6.

Flexible Pipe, Pressure-gauge, Safety-valve, and Connections, £3 3 0.

N.B.—To avoid the waste of gas, and also to keep up the pressure, this Cylinder can be fitted with a pump for pumping the water in at the screw of rocking arm, at a cost of £8 8s. ex. rd.

## COUNTER FOUNTAINS

For Syrup Drinks.

A small sharp stream of Aërated Water can be drawn from this Fountain, which, when syrups are taken, is absolutely necessary, so as to mix up the syrup with the water first. Afterwards, by pressing edge of glass against the small lever at the side, a large stream of water flows as in emptying a bottle of soda water. It is of very solid construction and thickly plated.

For more elaborate Counter Fountains in Marble, &c., see "C" Catalogue.

Price, thickly plated,  
£4 7 6.

Patent Check Valve (2/- per dozen extra). Every  
Syphon so fitted has the particulars of its advantages  
engraved on it.No charge for packing if ordered in our cases,  
from 2/- each, according to size.

From A. &amp; R. Thwaites &amp; Co., Ltd., 57 Upper Sackville Street, Dublin.

"We beg to say that the Syphons, as well as the other goods had from you for many years past, have always given us  
complete satisfaction, and we are pleased to hear of your continued success."

From Mr. W. Thompson, Lemon Street, Aberdeen.

"It gives me very great pleasure to state that the large supplies of Syphons you have supplied me with during the past  
three years have given me every satisfaction. They are superior to anything I have had from other quarters. They are  
strong, well-fitted, beautifully finished and engraved, and are much prized for their large nozzles, which allow the waters to  
flow freely without liberating the gas from the water, a necessary adjunct in the Syphon trade."

"7 September, 1891.

"10 September, 1891.

THE GREATEST IMPROVEMENT IN BOTTLES SINCE CODD'S ORIGINAL PATENT IS

## THE "NIAGARA" BOTTLE

(Or IMPROVED CODD'S).

Being joint Patentees with the late Mr. CODD, and having designed and perfected the Glass Ball  
Bottles from the first patent, in 1870, we contend we have had more experience in the designing and  
manufacturing of this class of Bottle than anyone else in the trade, and consequently are better  
able to judge the requirements necessary to make the MOST PERFECT BOTTLE, both in quality  
of GLASS and style of FINISH. We offer unhesitatingly, in the "Niagara" Bottle, the latest and  
most improved form of CODD'S Bottle. These Bottles will stand a higher pressure than any others  
in the Market.**PRICES ON APPLICATION.****SEND FOR SAMPLE AND COMPARE.**From Messrs. Smith, Stanistreet & Co.,  
Chemists, Calcutta.

"5 August, 1891.

"We are glad to say the shipment  
arrived in good condition. We have  
used your 'Niagara' Soda Bottles now  
for a considerable time, and have always  
been very satisfied with them, as they  
are reliable, of a standard quality, and  
stand good pressure."From Mr. G. A. Hall, jun., 46 Rua do  
Carmo, Lisbon.

"18 September, 1891.

"I have much pleasure in saying that  
I consider your 'Niagara' Bottle one of  
the best I have tried. The glass is  
strong and clear, and it is one of the  
easiest to wash, not being so liable to  
jam the brush as some others I have  
tried."From Messrs. Henry Chapman & Son,  
Tanners Hill, Devford.

"26 September, 1891.

"We have pleasure in hearing testi-  
mony to the appearance, strength, and  
efficiency of your 'Niagara' Bottle,  
which we shall continue to use. Our  
customers express great satisfaction at  
the ease with which the contents can  
be emptied."

## PATENT SCREW-

**SOLID VULCANITE.****Price 11/- per gross.**Made from solid vulcanite, being  
an almost imperishable article.  
Has a very neat and clean appear-  
ance; can be boiled for cleaning  
without affecting shape; may be  
used for alcohol.FREDK. FOSTER was  
the Original Inventor of  
SCREW-STOPPERED  
BOTTLES, TOOLS for  
MAKING THEM, and  
MACHINES for FILL-  
ING THEM.

See Patent No. 466, 1871.

Messrs. G. M. Long & Co.,  
87 Fulham Road, S.W."We have great pleasure  
in stating that we consider  
your Patent Screw-Stoppers  
for mineral waters the clean-  
est, most reliable, and best  
finished that have ever been  
offered to the trade. We  
find our customers highly  
approve of them, and we  
believe that eventually they  
will entirely supersede the  
corks."

## STOPPERED BOTTLE.

From H. G. Richards & Co.,  
Mineral Water Works, Mul  
Lane, Brixton Hill."Your Patent Screw-  
Stoppered Bottle has given every  
satisfaction; the waters are  
more highly charged with  
gas than we can possibly get  
in the ordinary cork bottles.  
Our customers are much  
pleased with the stopper,  
and pronounce them and the  
waters far superior to any  
they have seen."Mr. Bernard Eutter, Wine  
Merchant, 64 St. John's  
Hill, S.W."Your Screw-Stoppered  
Bottles are giving every  
satisfaction. I have sold  
them since their first intro-  
duction, and my customers  
all speak well of the mineral  
waters and stoppers. I shall  
therefore continue to recom-  
mend them with pleasure."**PORCELAIN.****Price 7/6 per gross.**The cleanest and best stopper in  
the market. The thread being  
of Aluminium is as pure as Gold.

# THE "FRANZ JOSEF" Natural Aperient Water

Claims these advantages in comparison with others of that class, viz.:—

- (1) It is the **STRONGEST** in the cathartic salts; and therefore less of it is necessary to produce the desired effect.
- (2) Fortunately it happens to be **ALMOST TASTELESS**.
- (3) Being a **PURELY NATURAL** Water, its action can always be depended upon.
- (4) It is most suitable for **CHILDREN** in small doses.

Of Special Value in the Treatment of **CHRONIC CONSTIPATION**,  
Lithemia, the Laxative for Ladies before and after Accouchement, Anemia, Dyspepsia, and Gastric Catarrh.

N.B.—On application, a Scientific Treatise on the "Physiological Action and Therapeutic Effects of Aperient Mineral Waters," for carrying out a prolonged course of treatment at home in imitation of that at Carlsbad and Kissingen.

Chemists will oblige by writing for the handsome Show Card, of which the above is a facsimile in Black and White, to—

**THE "FRANZ JOSEF" CO.,** 4 Sussex Place, **LONDON, E.C.**  
Leadenhall St.,

THE DANGER in drinking Soda Water and other Mineral Waters bottled in ordinary Syphons can now be avoided, as

# Schweppe & Co.

(LIMITED),

have introduced their

## Patent Syphons,

the heads of which are lined with porcelain, thus preventing metallic contamination, which is so dangerous. These Syphons are filled through an orifice at the bottom of the bottle, ensuring perfect aëration and cleanliness.

*Extract from "LANCET":—*

"Not only is there an element of novelty in the construction of these syphons, but, what is of greater importance, they are so made as to reduce to a minimum any chance of contamination with objectionable metals. The syphon heads are lined with porcelain or similar material, and the syphon is charged by means of an orifice at the bottom of the bottle, so that the jamming of the head necessary for refilling—a process which so often results in the cracking of the lining—is entirely avoided. Messrs. Schweppe's attention to an important matter of this kind is evidence of their desire to place before the public mineral waters of a high standard of purity."

A list of Agents in any town from whom these Syphons can be obtained sent on application to the Secretary at address as at foot.

**Schweppe's** New Factory on the Malvern Hills, where the "Sparkling Malvern" and "Malvern Seltzer" are bottled, is now completed.

**Report on the Spring:**

"It is an **Extraordinary** specimen of Pure Water."—G. BROWNEN, F.C.S.

"No purer Water exists in any natural sources than that of our own Malvern Springs."  
—"Food and Feeding," *Nineteenth Century*.

**Reports on the deep Artesian Well Water used at the London Factory:—**

"Water of the most excellent quality."—Professor FRANKLAND, F.C.S., F.I.C.

"Excellent quality for all drinking purposes."—Professor ATTFIELD.

Messrs. HASSALL & CO.

Gentlemen,—

Kindly forward  
another 18-Gallon  
Cask of Phospho-  
Citric Acid. We con-  
gratulate you on your  
recent improvement,  
for samples of our Waters  
were sent to one of the  
first Hospitals in the West  
End made from yours and  
Citric Acids, and yours was  
chosen as the purest and best.  
We have now discarded Citric,  
and you are at liberty to make  
use of this if you think proper.

Yours faithfully,

**THOMAS MAYO & CO.**

AVOID TRADE APES AND THEIR WORTHLESS IMITATIONS.

# “Sal-Sulphogen.”

(Stevenson)

UNDER this title we now offer a solid compound salt, which is practically SOLIDIFIED SULPHURIC ACID. From the details given below it will be seen that the preparation offers very great inducements to Mineral Water Makers and other users of Sulphuric Acid abroad, since many of the steamship lines will carry the “Sal-Sulphogen” at ordinary rates, in which case it can be imported at *about two-thirds the cost* of Oil of Vitriol packed in jars and cases.

“Sal-Sulphogen” is a solid crystalline compound containing about 75 % concentrated Sulphuric Acid of sp. gr. 1.840 (the

highest strength known in commerce), and is *soluble in its own weight of cold water*.

It has been successfully used for generating Carbonic Acid and other gases, and for the manufacture of Aërated Waters (for this purpose less water should be added to the whiting than usual), and for every other use to which Sulphuric Acid is applied in the Arts.

“Sal-Sulphogen” is packed in a solid state in strong iron drums (free) of 1 cwt. each (10 lbs. allowed for tare), and *there is no difficulty or danger in handling it*.

## PRICES ARE AS FOLLOWS F.O.B. EXPORT SHIP.

|                                                                           |          |                 | Freight, 2 tons 3 cwt., say, 35/ and 10 %                        | 3 3 0          |
|                                                                           |          |                 | Insurance, f.p.a., about ... ..                                  | 0 17 6         |
|                                                                           |          |                 |                                                                  | <b>£30 0 6</b> |

The above tables show a saving of about 30 % in favour of the “Sal-Sulphogen.” Should the Brokers require this Salt to be shipped on deck the cost is then nearly equal to that of Sulphuric Acid, and our friends should, for our guidance, instruct us definitely what course to follow.

*Directions for Use.*—The simple addition of an equal weight of cold water will

liquefy the “Sal-Sulphogen,” which may then be diluted to any strength required in the ordinary manner.

To remove the “Sal-Sulphogen” from the iron drums, cut down the seams with a strong knife and hammer. The contents should then be put into a lead-lined or earthenware tank, containing the requisite amount of water.

**VIKING**  
**TURTLE CONSOMMÉ**  
(Clear Soup).

*The British Medical Journal*  
says :

"The Preparations of this Company are pure and of very high quality."

*The Lancet* says :

"These Preparations seem to us as good as they could possibly be."

FROM THOMAS BOND, F.R.C.S.,  
M.B., B.S., LONDON, Surgeon to  
Westminster Hospital, 7 The Sanctuary, Westminster Abbey.

"I have much pleasure in stating that I have used the Viking Essence of Beef and the Invalid Turtle Soup among my patients. I have found them meet with universal approbation. I can state from my own experience that the Turtle Soup is the most delicious food I have ever met with for the sick-room; it is easily digested, and generally taken with relish, even when the appetite is most capricious. The Essence of Beef appears to me to be a thoroughly good and nutritious food."

[1]

The whole of the above articles are strongly recommended by the Medical Profession for Invalids. They are of the highest class and guaranteed perfectly pure, those preserved in GLASS being free from all risk of metal contamination, and therefore especially suitable for delicate persons.

These goods are packed in a tasteful and attractive style, and the reduced prices quoted enable our customers to sell at a lower price (and at the same time retain a substantial profit) and supply goods which Consumers will always ask for again.

## THE VIKING BRAND IS A GUARANTEE OF STRENGTH & PURITY

# GEORGE MASON & CO.'S ESSENCE OF BEEF FOR INVALIDS

MASON'S ESSENCE OF BEEF consists solely of the juice of the finest British Beef, without the slightest addition of any other added matter whatsoever. It is therefore absolutely pure. In all cases of loss of blood or extreme debility, Mason's Essence of Beef not only exhilarates the brain, but gives tone and strength to the whole system. In cases of vomiting, whether through pregnancy or otherwise, it is retained by the stomach when other food is rejected.

Hospital for Consumption,

Please send at once  
3 gross MASON'S  
ESSENCE OF BEEF  
as last supplied.

## MASON'S "O. K." BOUILLON.

The "O. K." BOUILLON is made in England from British Beef, and contains the Fibrine and Albumen in their most perfect form. It is without doubt the best and cheapest Beef Tea that has ever been put before the public, and its nutritive and stimulating value is at least 100 times greater than any of the foreign-made extracts that are sold in this country. Mr. George Weddell, of the eminent firm of Mawson,

Swan & Weddell, Grainger Street, Newcastle-on-Tyne, sends us the following unsolicited testimonial:—  
30/10/90.

GENTLEMEN,—I have used your "O. K." Bouillon for nearly three years, and have found it an excellent restorative. During a long illness in my family, and again in the debility following influenza, we used it largely, and every cup seemed to improve the spirits and general condition. I shall always have pleasure in recommending it.

Faithfully yours,

GEORGE WEDDELL.

There is not a day passes without our receiving letters similar to the above. The trade should bring this splendid Beef Tea to the notice of their customers.

**CONCENTRATED BEEF TEA, MEAT LOZENGES.**

## MASON'S MALTED FOOD FOR INFANTS.

The above preparation contains the nitrogenous elements of farinaceous food. It is in a semi-digested condition, and in a state readily assimilated by the Infantile organs.

**MASON'S "O. K." SAUCE.**

A delicious Condiment.

PRICE LISTS, OPINIONS OF THE PRESS POST FREE.

**CHEMISTS & DRUGGISTS**  
 OF  
**GREAT BRITAIN.**

TELEGRAPHIC ADDRESS:

*St. George's, Middle St.***COLEMAN,****NORWICH,****GEORGE'S, NORWICH.***December, 1887.*

The Excise Authorities having created a difficulty as to the sale of Medicated Wine containing a certain percentage of alcohol, we obtained in January last, from the Inland Revenue Authorities, permission to sell our WINCARNIS,\* or Liebig's Extract of Meat and Malt Wine, **WITH QUININE**, without a Wine Licence, and many Chemists not holding a Wine Licence have sold considerable quantities. In order further to meet the requirements of the trade, we have introduced a Liebig's Extract of Meat and Malt Wine, **NON-Alcoholic**, made from the juice of the Grape, Liebig's Extract of Meat, and Extract of Malt. This also can be **SOLD WITHOUT A WINE LICENCE**. Your orders will oblige either direct or through the Wholesale Houses.

Yours obediently,

**COLEMAN & CO., LIMITED.**

*N.B.—The Wine is sold in Bottles, 2/9 and 4/6 each.  
 Trade prices on application.*

*P.S.—Where the Magistrate's Certificate is not held we are willing to pay the entire cost of a Retail Certificate (the holder of which can sell any kind of Wines) if an assorted order of 6 dozen is sent us of any of our preparations. List on application. Our WINCARNIS,\* or Liebig's Extract of Meat and Malt Wine WITHOUT QUININE commands a very large sale, and is recommended by over two thousand medical men who have sent us testimonials in its favour.*

**SOLE MANUFACTURERS—****COLEMAN & CO., LIMITED,****ST. GEORGE'S, NORWICH,****AND 3 NEW LONDON STREET, LONDON, E.C.**

VOICE LOZENGES, TOP-NOTE PRODUCERS, &c., &c.**

Indents from abroad, marked "GIBSON," may be sent to any Wholesale Drug or Shipping House in the Kingdom.

Price Lists sent on application to

## ROBERT GIBSON & SONS, Carlton Works, MANCHESTER.

# DRUGGISTS' CONFECTIONERY

The SPECIAL ATTENTION OF CHEMISTS

IS DRAWN TO THE FOLLOWING:—

LINSEED, LIQUORICE, AND CHLORODYNE COUGH LOZENGES.

**A HANDSOME COUNTER MAHOGANY SHOW CASE**

Given to any Chemist buying 1 cwt. of above Lozenges. Price 1/- per lb. net.

## GIBSON'S VOCAL LOZENGE

**"TOP NOTE PRODUCERS."**

The immensely increasing demand for these Lozenges, and their wonderful popularity, is entirely due to their intrinsic merits, not only as producers of a fine clear voice, but as an effectual remedy for all Chest Affections; Sore Throats, arising from cold, seem to disappear as if by magic; Tickling in the Throat or Hoarseness is removed by allowing a few Lozenges to gradually dissolve in the mouth; indeed, Debility and Weakness of the Vocal Organs are unknown to those who regularly use these valuable Lozenges. Sold in 1/1½ and 2/9 Boxes.

## CHERRY BLOSSOM LOZENGES,

The most delightful and delicately perfumed Lozenge ever produced; have an immense sale.

*With 4 lbs. of these Lozenges we give one of Mellin's Patent White-glass Silver Top Screw-stoppered Bottles.*

## VOICE AND THROAT LOZENGES, FOR SINGERS AND PUBLIC SPEAKERS.

## DIGESTIVE DINNER TABLETS,

Composed of Bismuth, Cardamom, Soda, Rhubarb, Ginger, &c.

## CHOCOLATE WORM CAKES,

Very palatable and unusually attractive.

Packed in Tins, each containing 3 doz., 6 doz., or 12 doz. Cakes. Retail at One Penny each.

## Sugar Worm Cakes,

Contain Calomel, Jalap, and Santonine (flavoured with Raspberry), are palatable and very effective.

As they will keep in any climate, a steadily increasing demand is made for them for EXPORT.

Put up in 3-doz., 6-doz., and 1-gross Tins.

# BUNSEN'S BUTTER COLOURING

A PURE, OILY, VEGETABLE EXTRACT.

Manufactured on our own Premises, and Absolutely Free from anything injurious.

**WITHOUT TASTE! WITHOUT SMELL!! HIGHLY CONCENTRATED!!!  
DOES NOT COLOUR THE MILK!!!!**

**BUNSEN'S BUTTER COLOURING** is an ideal preparation for the purpose intended. No invention could possibly give greater satisfaction. The tint given to the Butter is perfect, and the Butter thus coloured will fetch a higher price in the open market than any other.

The Four Points of Superiority claimed by the Manufacturers of BUNSEN'S BUTTER COLOURING are:—

1. FREEDOM FROM TASTE,
2. FREEDOM FROM SMELL,
3. VERY HIGH CONCENTRATION,
- AND 4. PERFECTION OF TINT.

Points 1 and 2 can be readily tested by anyone, and 3 and 4 can easily be tested by the Practical Dairy Farmer, who is invited to compare BUNSEN'S BUTTER COLOURING with any other make.

Having recently increased our plant, we are now able to manufacture Twelve Hundred Gallons at a time, which will enable us to execute any order, no matter how large, without delay. We are prepared to put up Butter Colouring in any size, with directions in any language.

# BEATS ALL SELF-PRAISE.

## What they say about OUR BLENDED TEAS!!!

☞ May 26, 1892.—“I have put your Teas in fair competition with several other samples, and I must say I FIND THEM PENCE PER POUND BETTER VALUE ALL ROUND.”

☞ May 18, 1892.—“I find out of the many samples sent to me from other Tea Merchants, NONE OF THEM COME UP TO STANDARD LIKE YOURS.”

☞ May 21, 1892.—“...am VERY WELL PLEASED with the Teas.”

☞ April 27, 1892.—“I GET PRAISE AND SATISFACTION FROM EVERYBODY. I think this shows that your Teas are the BEST ON THE LONDON MARKET, and I also think they are MORE UNIFORM THAN OTHER HOUSES.”

☞ March 11, 1892.—“I can bear out your own statement with regard to YOUR TEAS STANDING THE CLOSEST COMPETITION, as all Teas I have had from you are UP TO DATE as regards CHEAPNESS and QUALITY, and this last chest I have from you is the BEST VALUE EVER I BOUGHT.”

☞ March 21, 1892.—“Am very much pleased with Tea <sup>40</sup> received, and I think it very good value, and IS PENCE PER POUND BETTER THAN SAMPLES FROM OTHER HOUSES AT SAME PRICE.”

## What they say about OUR “SPRING BLOSSOM”!!!

☞ “Having tested the ‘Spring Blossom’ Ceylon along with OTHER LONDON HOUSES’ PACKET TEA, I FIND YOURS CONSIDERABLY THE BEST.”

☞ “My customers have taken to the ‘Spring Blossom’ well. I have taken great pains to get a Tea to please them. I HAVE NOW GOT THE RIGHT TEA. Keep it up to the mark.”

☞ “The Tea being good has a ready sale. Every one who has had it once, says it is THE BEST TEA THEY HAVE EVER HAD AT THE PRICE.”

☞ “I am happy to say that MY CUSTOMERS THOROUGHLY APPRECIATE THE ‘SPRING BLOSSOM’ THAT YOU SEND ME. and I have no reason to go elsewhere, although tempted with samples.”

☞ “I find the ‘Spring Blossom’ HOLDS ITS OWN AGAINST THE VARIOUS BLENDS THAT ARE PUSHED BY A FEW ENTERPRISING GROCERS IN THIS NEIGHBOURHOOD.”

☞ “I have had no Tea to SURPASS IF TO EQUAL YOURS.”

WE ARE OPEN TO APPOINT AGENTS FOR “SPRING BLOSSOM,” WHERE NOT REPRESENTED.

☞ Originals may be seen at our Office. ☞

# GILBERTSON'S DISPENSING BOTTLES

(No. 118,583)

ARE NOW IN UNIVERSAL DEMAND OWING TO THEIR IMPROVED SHAPE.

GILBERTSON'S  
DISPENSING.

They are made with rounded corners without altering their flat surfaces, which not only adds to their appearance, but reduces breakage to a minimum, ensuring accurate capacity, simplifying labelling, and producing a perfect appearance when wrapped.

FACSIMILE OF BOTTOM OF BOTTLES.

GILBERTSON'S  
IMPROVED SALINE.

Extract from "C. & D.," 27th July, 1889.

MESSRS. H. GILBERTSON & SONS, of 11 St. Andrew's Street, Holborn Circus, have recently introduced a Dispensing Bottle which is sure to be a favourite. It is an ordinary "flat" with rounded edges, shown here in section. The bottle, being well made and nicely tinted, has a beautiful appearance, and is also much stronger than the "flats" with corners, so that the liability to breakage is reduced.

The success our Bottles have met with since we introduced them in the year 1889 (see extract from "Chemist and Druggist," 27th July, 1889, page 130) has caused many similar shaped bottles to be placed on the market, and which are offered under such titles as—

"NEW TINTED OLDHAM FLATS" (with rounded edges),

"OUR NEW DISPENSING FLATS,"

"FLATS WITH ROUNDED CORNERS," &c., &c.

**WHEREAS**—H. G. & SONS beg to notify the trade that their original **BEST QUALITY** can only be obtained with their name and number on the bottom of each bottle, which is a guarantee of superior quality and uniform excellence.

**N.B.**—All sizes and graduations supplied, either in Medical Blue Tint or White Flint, from stock in London, on receipt of orders. Also in Crates, direct from Works, Ten Days afterwards. Crates and Carriage Free.

These Bottles are supplied with Flat, Globe, or Cut Globe Stoppers; also made in Actinic Green and Amber, suitable for Specialities.

Casks for EXPORT are charged, but delivered F.O.B. Name Plates extra, at usual rates.

Special Quotations to Shippers and the Wholesale Trade. Illustrated Price List sent on application.

# CLASSIFIED LIST OF ALL ADVERTISERS

Whose Announcements appear in "THE CHEMIST AND DRUGGIST." Those whose Names do not appear in the preceding Index are published in one of the other issues of this month.

## ACETIC ACID

Fuerst Bros.  
Greiff, R. W., & Co.  
Morris & Callard (Salts)

## ADVERTISING SPECIALITIES

Lawton, J. W.  
Sears, F. W.

## AGENTS & MINERALS

Apollinaris Co.  
Barnett & Foster  
Cantrell & Cochran  
Carter & Wright  
Chemists' Aerated Waters Association (Lim.)  
Ellis & Son (Butane)  
Fletcher Fletcher & Stevenson  
Franz Joseph Co.  
Goldschmidt  
Goldschmidt & Co.  
Hassall & Co. [Hay, W]  
Hulsen, J., & Co.  
Idris & Co.  
Ingram & Royle  
Jewsbury & Brown  
Johanniss Spring (Lim.)  
Mills & Co. (Bourne)  
Schacht, W., & Co.  
Schweppe, J., & Co.

## BITTO PLANT

Ses SYRONS and ESSENCES.]  
Barnett & Foster  
Brady & Hinchliffe (Lim.)  
Gueret Freres  
Loft Bottle-washing Machine  
Meadowcroft & Son [Co.  
Tyler, Hayward, & Co.

## AGENCIES ABROAD

Anstruther Drug Co.  
Bartie & Smith & Co.  
Felton, Grimwade & Co.  
(Melbourne)  
Kempthorne, Prosser & Co.  
Lennan, B. G., & Co. [N.Z.]  
Levy, Jules  
Peake, Allen & Co.  
Prosser, Taylor & Co.  
Roberts (Paris, & Co.)  
Roche, Tompsett & Co. (Melbourne)  
Sharland & Co.  
Soul, W. H., & Co.

## ALKALOIDS

Howards & Sons (Oleohona)  
Smith, T. H., & Co.

## ALMANACKS

Ford, Shapland & Co.  
Hiltschneider & Faulkner  
Silverlock, H.  
Townsend, J.

## AMMONIA

May & Baker (Lim.)  
White, A., & Sons  
Woolley, Sons & Co.

## APPARATUS

Hicks, J. J.  
Ohlson, A.  
Orme, J., & Co. (Scientifics)  
Perken, Son & Bayment  
Poths, H., & Co.  
Wedgwood & Sons (Mortars)

## BAKING POWDER

Goodall, Backhouse & Co.

## BANDAGES

Bailey, W. H., & Son  
Robinson & Sons  
Schutze, F., & Co.  
Warne & Co.

## BATH GLOVES

Pattison, G.

## BEESWAX

Boehm, F.  
Bowdler, W. H., & Co.  
Taylor, A. J., & Co.

## BICARE, SODA

Brunner, Mond & Co. (Lim.)  
Burdicks & Sons  
Jancke, W.  
May & Baker (Lim.)

## BISMUTH PREP.

Hearson, Squire & Francis  
Hewlett & Sons  
Howards & Sons  
May & Baker (Lim.)  
Fynes & Co., J. Tyrer, T., & Co.  
White, Alfred, & Sons

## BOOKS

Attfield's Chemistry  
Burroughs, Wellcome & Co.  
(Birmingham's Pharmacy)  
Hargreaves, Dr. M. A.  
Herschell, Dr. J. Muter, Dr.

## BORAX

Howards & Sons  
Black's Starch  
Mear & Green

## BOTTLE CAPS

Masell, Hunt & Co. (Lim.)

## BOXES

Anstin & Co. (Cardboard)  
Evans, Sons & Co.  
Farmer, I. W., & Co. (Lim.)  
Robinson & Sons

## BRUSHES

Evans, Sons & Co.  
Kent, G. R., & Sons

## BUNSEN BURNERS

Berend & Co.

## BOTTLES

Aire & Calder Bottle Co. (Lim.)  
Barnett & Foster  
Barrett, R. H.  
Brady & Hinchliffe (Lim.)  
Bash, H. W., & Co.  
Continental Glass Co.

(ESTABLISHED A.D. 1746)

## SCHEDULED POISONS.

THE publishers of "Newbery's Catalogue" are willing to indicate, in their

### ISSUE FOR 1893

Whether or not any medicinal preparation appearing therein is deemed by the Proprietor to be affected by the "Sale of Poisons and Pharmacy Act Amendment," 31° & 32' Vic. C. 121.

The following particulars are therefore invited, viz. :—

1. Name of Preparation.
2. Whether it is already labelled in accordance with the provisions of the above Statute.
3. Or that it is not considered necessary by the Proprietor to affix a label indicating that the preparation contains a poison named in Part 1 or Part 2 of Schedule A appended to the above Statute.
4. Or that, according to the Proprietor's statement, the preparation contains no scheduled Poison.

The above particulars should be addressed to

**F. NEWBERY & SONS, 1 & 3 KING EDWARD ST., LONDON, E.C.**

so as to reach them by October 3 next, and should be quite separate from communications on other subjects.

July 23, 1892.

# EXCHANGE COLUMN.

Gillman, 89 Camden Street, N.W.

Now Ready.

Medium 24mo.

# THE EXTRA PHARMACOPŒIA:

Seventh Edition.

7s. 6*d.*

With Medical References and a Therapeutic Index of Diseases and Symptoms.

By WILLIAM MARTINDALE, F.C.S., and W. WYNN WESTCOTT, M.B., LOND.

"Has become so well established a favourite with both pharmacists and medical practitioners that it partakes of the character of a work of supererogation to dilate, at this stage in its history, upon its merits."—*Pharmaceutical Journal*, April 12th, 1890.

LONDON: H. K. LEWIS, 136 GOWER STREET, W.C.

## TO CHEMISTS AND DRUGGISTS.

AGENTS WANTED FOR THE SALE OF  
**"THE SYPHON"** (REGISTERED TITLE) **HYGIENIC CONDENSING GAS HEATING-STOVES**  
 (CLARK'S PATENT).

A Necessary for all Invalids. A Comfort to Everybody.

**NO FLUE REQUIRED. FREE FROM SMELL OR SMOKE.**

All injurious vapours are reduced to harmless liquid inside the Stove, and passed out at foot into a tray provided for that purpose.

For use in Hospitals, Sick Chambers, Bedrooms, Halls, Conservatories, Schools, Shops, &c.

They give a Pure, Equable, and Agreeable Heat, which can be graduated and sustained at the will of the user.

Specially suitable for patients suffering from Bronchial affections, as a moist atmosphere is obtainable when required.

For Terms, Particulars, and Prices, apply to

**S. CLARK & CO.,** Patentees and Makers, Syphon Works, Park Street, ISLINGTON, LONDON, N.

Telegraphic Address—"SYPHON STOVES LONDON." Wholesale Agents—Messrs. MAW, SON & THOMPSON, Aldersgate Street, London, E.C.

# CORN PLASTERS.

## JOHNSON & JOHNSON.

### WHITE FELT CORN PLASTERS.

JOHNSON & JOHNSON.

Particular attention is drawn to the quality and whiteness of the felt used in our Corn and Bunion Plasters. They will not curl at the edges and thus become useless.

In 6d. boxes, round or oval, Thin, 2/3 per dozen boxes.

In 6d. boxes, round or oval, Thick, 2/10 per dozen boxes.

The advantage of the 6d. box is that you are enabled to sell twelve Plasters to a customer where you would only sell one if packed loose.

### RED CROSS CORN PLASTERS.

JOHNSON & JOHNSON.

White felt. Rubber base. Adhere without heat or moisture.

Conform readily to the part to which they are applied.

Always soft and pliable and comfortable to the foot.

In 6d. boxes, 3/9 per dozen.

### LONDON CORN PLASTERS.

JOHNSON & JOHNSON.

Briefly described as follows:—The centre is a piece of Salicylic Plaster Mass (40 per cent.), which is placed over the corn.

Around this is a corn shield which prevents pressure from the boot, and the Salicylic from going beyond and injuring the flesh.

The whole is kept in position by means of a strip of adhesive plaster on the back.

**SALEABLE**  
BECAUSE  
**SENSIBLE.**

Packed in 6d. and 1s. boxes. Sample dozen mailed to any chemist's address on receipt of 3/6 for the 6d. size, or 6/6 for the 1/- size.

### ARNICATED FELT CORN PLASTERS.

JOHNSON & JOHNSON.

These possess the same advantages as the white, in addition to which a percentage of arnica is added to the adhesive material used, in many cases a great advantage.

In 6d. boxes, round or oval, Thin, 2/3 per dozen boxes.

In 6d. boxes, round or oval, Thick, 2/10 per dozen boxes.

### BELLADONNA CORN PLASTERS.

JOHNSON & JOHNSON.

Same as "Red Cross," with the addition of Belladonna to the base.

Where pain is experienced, they will be found to have a soothing effect.

In 6d. boxes, 3/9 per dozen.

### EMP. SALICYLIC AND CANNABIS INDICA.

(Salicylic Acid 20 per cent. Cannabis Indica 25 per cent.).

### EMP. SALICYLIC 40 per Cent. EMP. SALICYLIC 25 per Cent.

These are prepared with rubber base, so that they adhere without heat or moisture. Are spread on strong cotton cloth. In yard rolls 7 in. wide Chemists can cut to any size required. We specially recommend our Salicylic and Cannabis Indica as a Corn Plaster.

IN ORDERING FROM THE WHOLESALE TRADE PLEASE SPECIFY JOHNSON & JOHNSON.

**JOHNSON & JOHNSON, LTD., 1 & 2 AUSTRALIAN AVENUE, LONDON, E.C.**

PACKED FOR EXPORT, £12 NETT.

In introducing to our Colonial friends, Spectacles, Folders, and Eye Preservers made of a non-oxidisable metal especially suited for wear in *hot climates*, we made a distinct success; the large repeat orders which we have received have satisfied us that these are the goods to push in countries where steel articles rust. The pure white non-corrosive metal is hardened and tempered to suit the requirements of Spectacle Makers, and is exceedingly comfortable to wear, having the softness of gold combined with the elasticity of steel. For the convenience of those who have not hitherto stocked Optical Goods, we have arranged a complete outfit of Spectacles and Folders to suit all sights, flat, tinted, and dome-shaped Eye Preservers, Showcase of solid mahogany, finished to stand any climate, Sight Tester, Test Type, and Coloured Showcards, packed for export and delivered f.o.b. London. Contents as follows:—

- |                                                                      |                                                       |
|----------------------------------------------------------------------|-------------------------------------------------------|

# A FEW GOOD COUNTER LINES.

## EXTRACT OF MALT WITH COD LIVER OIL.

During the last few years, Extract of Malt and Cod Liver Oil has become immensely popular with the medical practitioners and the general public.

There are many preparations in the market, but Chemists may push this one with confidence, as it compares favourably in every respect with any of the higher priced goods.

### PRICES.

- 1/- size, 8/- per doz.  
2/- size, 15/- per doz.

## EXTRACT of MALT (PLAIN)

Is also put up in the same style.

## CACHOU PEARLS, AND Special Bouquet Lozenges

We invite your attention to these; the goods are made from the finest materials, and nothing has been spared to render them bright and attractive in appearance, whilst the flavours are fresh, mellow, and refined.

Packed in white glass bottles, with boxwood-top corks, and labelled neatly; a series of flavours, tastefully displayed, arrests the attention of customers; presents an attractive appearance, and tempts both the palate and the pocket.

### FLAVOURS.

|               |              |
|---------------|--------------|
| Ess. Bouquet. | Lilac.       |
| Frangipanni.  | Millefleurs. |
| Hawthorn.     | Musk.        |
| Heliotrope.   | Rose.        |
| Jockey Club   | Violet.      |
| Lavender.     |              |

Price:—CACHOUS, 3/- per lb.; PEARLS, 2/6 per lb.

## WORM TABLETS.

Buyers ordering three gross may have them packed either in boxes or in quarter, half, or one gross tins, as above.

The difficulty of inducing children to take medicine has been effectually overcome by this line, as is attested by the increasing sale of these Tablets during the past twenty years.

### PRICES:—

6/- per gross; Three gross, 5/6. Gingerbread Worm Cakes, 5/- per gross.

## GLYCERINE & PAREGORIC PASTILLES (Patent No. 17213).

These we place before our customers for the third season. The demand is very encouraging, and demonstrates that the public are ever ready to appreciate any effort which is made to render the administration of medicine as palatable as possible. Each box contains eight pounds of Pastilles, and a liberal supply of handbills, window tickets, and neat box labels, so that they may be retailed from the bulk or offered in packages, as the vendor may wish.

8-lb. Boxes, 1/8 per lb.

# "LANOLINE" Toilet Preparations.

Our friends in the trade have so often urged us to publicly advertise the "Lanoline" preparations in the leading, daily and other papers that we have decided to do so. Underneath we append copies of said advertisements which will we believe create a considerably increased demand for these original and excellent preparations. The public will be looking for them and chemists will therefore, find it to their profit to place them in a conspicuous position. People who see an advertised article which they want in a chemist's shop window will enter the shop to buy and permanent customers are often thus secured by progressive chemists.

**"LANOLINE" SOAP**—Recommended by members of the medical profession everywhere. Keeps the skin soft, smooth, and free from blotches. Should be used constantly. Obtainable from all Chemists and Druggists.

**THE BEST TOILET SOAP.**—Impure soaps are the source of many skin affections. "Lanoline" Soap is perfectly pure, and will not injure the most delicate skin. Ask your Chemist and Druggist for "Lanoline" Soap.

**"LANOLINE" SOAP** contains "Lanoline," which will replace the natural fat of the skin, and hence keeps the skin soft, supple, and healthy. No other soap should be used for the toilet and nursery. From all Chemists and Druggists.

**"LANOLINE" SOAP** is free from excess of alkali, and will not produce irritation of the most sensitive skin. It is emollient and purifying to the skin and complexion. From all Chemists and Druggists.

**"LANOLINE" SOAP** should be used for the toilet and in the nursery. Indispensable in every lady's boudoir. Invaluable for the complexion. Absolutely non-irritating. To be obtained from all Chemists and Druggists.

**"LANOLINE" CREAM and POMADE.**—"Lanoline" will replace the natural fat of the skin and hair, and therefore the "Lanoline" preparations are the best for the Toilet. From all Chemists and Druggists.

**"LANOLINE" SOAP.**—Recommended by members of the medical profession everywhere. Keeps the skin soft, smooth, and free from blotches. Should be used constantly. Obtainable from all Chemists and Druggists.—[Advertisement.]

**THE BEST TOILET SOAP.**—Impure soaps are the source of many skin affections. "Lanoline" soap is perfectly pure and will not injure the most delicate skin. Ask your chemist and druggist for "Lanoline" Soap.—[Advertisement.]

**"LANOLINE" SOAP** contains "Lanoline" which will replace the natural fat of the skin, and hence keeps the skin soft, supple, and healthy. No other soap should be used for the toilet and nursery. From all Chemists and Druggists. — [Advertisement.]

**"LANOLINE" SOAP** is free from excess of alkali, and will not produce irritation of the most sensitive skin. It is emollient and purifying to the skin and complexion. From all Chemists and Druggists.—[Advertisement.]

**TOILET "LANOLINE", for the SKIN.** Soothing and Cooling in Inflamed Conditions. Preservative; Preventing Wrinkles. Valuable for Burns and Wounds. From all Chemists and Druggists.

**TOILET "LANOLINE".**—Antiseptic & Cooling. One of the Best Applications against Abrasions. Excellent for Burns and Wounds. In Collapsible Tubes. From all Chemists and Druggists.

**TOILET "LANOLINE",** a Preservative of the Skin. Prevents Wrinkles. Valuable for Burns and Wounds. Relieves Itching and Irritation. From all Chemists and Druggists.

**CHAPPED or CRACKED HANDS or LIPS.** Burns, Cuts, and Bruises. Chafing in Young Children. The Best Remedy is TOILET "LANOLINE". From all Chemists and Druggists.

**TO PRESERVE the COMPLEXION.** Against Wind, Heat, Irritating Dust &c., Against Burns, Wounds, Abrasions, The Best Application is TOILET "LANOLINE". From all Chemists and Druggists, in tubes.

## TO CHEMISTS & DRUGGISTS.

RECOGNISING the fact that our Specialties are frequently sold on margins which cannot be satisfactory to purveyors of drugs, we have with the approval of several leading firms, prepared a distinctive package of Bovril—"Bovril for Invalids."—The contents are in paste form, free from seasoning, and specially adapted for use in the sick-room or during convalescence.

This special pack will be supplied exclusively to Chemists and Druggists, and to them, only on condition that the price is not to be cut under that marked upon the pots, viz. 1/3 and 2/-.

With the first order Chemists and Druggists will please be good enough to send to their wholesale source of supply the enclosed form duly signed.

We feel sure that the trade will appreciate this little innovation, and that our efforts to still further increase their interest in our goods will be successful.

**BOVRIL,** Limited,  
30, FARRINGTON STREET, LONDON, E.C.

18

$\frac{I}{WE}$  hereby agree with Bovril, Limited, not to sell Bovril Labelled "Bovril for Invalids") under the marked prices of 1/3 and 2/-. This undertaking  $\frac{I}{WE}$  engage honourably to abide by, both in this and any subsequent transactions.

# Benger's

GOLD MEDAL AWARDED  
HEALTH EXHIBITION, LONDON.

# Food.

FOR INFANTS, CHILDREN,  
AND INVALIDS.

*Benger's Food is very extensively Advertised at Home and Abroad.*  
**It has a Large and Increasing Sale wherever introduced.**

The following Extracts from the Medical Journals, and from Private Letters received by the Manufacturers, sufficiently indicate its high character, and the estimation in which it is held alike by the Medical Profession and by the Public.

**The LANCET says:—**

“Mr. Benger's admirable preparations.”

**The BRITISH MEDICAL JOURNAL says:—**

“Benger's Food has by its excellence established a reputation of its own.”

**The LONDON MEDICAL RECORD says:—**

“It is retained after every other Food has been rejected. It is invaluable.”

**The ILLUSTRATED MEDICAL NEWS says:—**

“Infants do remarkably well on it. There is certainly a great future before it.”

**From an EMINENT SURGEON:—**

“After a lengthened experience of Foods both at home and in India, I consider ‘Benger's Food’ incomparably superior to any I have ever prescribed.”

**A MEDICAL MAN writes:—**

“This particular Food is the only one I have been able to take constantly and with advantage. I have prescribed it for others with the best results.”

**The COUNTESS OF ——— writes:—**

“I really cannot resist telling you of the marvellous results of Benger's Food. Not only am I quite renovated by a cupful every morning, but my daughter is taking it and finds great benefit.”

**A LADY writes:—**

“I consider that, humanly speaking, Benger's Food entirely saved baby's life. I had tried four other well-known foods, but he could digest nothing until we began the ‘Benger.’ He is now rosy and fattening rapidly.”

[OVER.]

**BENGER'S FOOD - *Continued.***

*EXTRACTS FROM PRIVATE LETTERS.*

---

"I feel I can no longer delay testifying my gratitude for, and full appreciation of, your valuable Food. It was a principal means of saving my life during the fearful Influenza Epidemic."

---

"I enclose a photograph of my baby, aged 9½ months, who has been fed entirely on 'Benger's Food' since he was one day old. The condition of the child proves, I think, the value of your Food for Infants."

---

"I have very much pleasure to inform you regarding the highly satisfactory results which followed the use of 'Benger's Food' in the case of our baby. At the age of three months, after a severe illness, 'Benger' was tried, and used for seven months with almost miraculous results. Our baby is now a picture of health and strength. We offer you our hearty and grateful thanks for such a health-giving Food."

---

"I have a very delicate infant who was, a month since, at death's door. Whatever food its mother gave it was vomited immediately, and we were advised medically to use 'Benger's Food.' I am heartily glad to state that my little one is quite a different child, and has thriven beyond our expectation."

---

"In the public interest I deem it right to inform you what a marvellous change has taken place in my infant since using your 'Benger's Food.' We used several Foods till about the end of February, but he made little progress. Mr. —, the well-known surgeon, called to see him, and strongly recommended your Food. In a week we saw a change, and he is now a strong, healthy child."

---

"The writer has a baby who, soon after its birth, became very poorly and could not take any food, its mother had no milk; after trying several notable makes of Food without success, and the child, meanwhile, sinking, we tried 'Benger's Food.' The child has had nothing else for eight months, and is now a fine, healthy girl."

---

"The infant was very delicate, and our medical adviser ordered your Food. The result in a short time was wonderful, the little fellow grew strong and fat, and is now in a thriving condition—in fact, the 'flower of the flock.'"

---

"I have for a considerable time been contemplating to tell you of the gratifying result your Food has had with my baby. He has now taken it for about 12 weeks, and everybody says he is the best advertisement you ever had. Now, at 20 weeks old, he weighs 23½lbs., and he looks more like a child of 18 months."

---

"Having just recovered from a severe and protracted attack of Influenza, pure gratitude demands my acknowledgment of the inestimable value of 'Benger's Food.' It is not too much to say that I believe it saved my life."

---

**BENGER'S FOOD is sold in Tins at 1/6, 2/6, 5/-, and 10/-, by Chemists everywhere.**

---

It may be obtained through all Wholesale Houses and Shippers, or from the Manufacturers,

**F. B. BENGER & Co. Ltd., Manufacturing Chemists,  
OTTER WORKS, MANCHESTER.**

## GRAVINA.

CETTE excellente préparation d'un emploi facile, consiste uniquement en un extrait de viande fraîche combiné avec des légumes de choix, tels qu'on s'en sert d'habitude pour la préparation des sauces.

Ces légumes, cueillis et aussitôt séchés sur place, nous permettent de conserver intacte la saveur du légume frais que nous employons dans notre préparation de "GRAVINA."

Nous présentons ainsi, sous un petit volume, le moyen de faire rapidement des potages et des sauces, bien supérieurs à ce qu'on peut espérer d'obtenir en se servant des légumes du marché, qui perdent si vite leur fraîcheur première.

Economical · Nutritious ·

## GRAVINA.

THIS excellent and handy preparation consists of Extract of Beef of the finest quality, combined with such choice garden vegetables as are usually employed in the preparation of the best Gravies; these vegetables, grown in the highest perfection in the districts most favourable for their production, are submitted to a drying process on the spot, which, while it expels the superfluous moisture, preserves their natural flavour intact; thus by reducing the weight, they can be placed in the hands of the Consumer cheaper, and in a much more perfect condition, than the great bulk of what is brought to market—too often only nominally fresh. By the use of GRAVINA, a rich, delicious Gravy or Soup may be prepared in a few minutes.

1 lb. CANISTER 1/10  
 ½ lb. do. 1/- ¼ lb. do. 6d.  
 FREDK. KING & Co Limited.  
 LONDON & BELFAST.

# Gravina.

[REGISTERED TRADE MARK.]

## EDWARDS' GRAY POWDER

### WHY WE SHOULD USE GRAVINA.

**BECAUSE** it is a Pure and Nutritious Food, composed of Extract of Beef and Garden Vegetables (grown largely on the Proprietors' own lands), and no Peas, Beans, or other indigestible substances are used in its manufacture ; it requires no skilled labour to convert into Gravy or Soup ; is Economical, and therefore a Household necessity.

**BECAUSE** it saves fully *one-half* the cost of the materials required to make Gravy or Soup in the ordinary way.

**BECAUSE**, in Summer, very hot fires are not needed to prepare stock for Gravies or Soups when **Gravina** is used. Anyone can produce in a few minutes, with a dessert-spoonful of **Gravina**, an excellent Gravy or basin of Soup.

**BECAUSE**, while it makes of itself a perfect Soup, it may be used advantageously as a basis, or stock, for Kidney, Pigeon, Oxtail, Maccaroni, Mulligatawny, Hessian, Curry, and Rabbit Soups ; also for Purée of Chicken, Game, Vermicelli, Hare, Partridge, or Gilet ; Veal, Mutton, and Scotch Broth.

HIS PRODUCT.

# ARMBRECHT COCA WINE.

IMITATED, NOT EQUALLED.

When the history of modern Pharmacology and Therapeutics comes to be written, an outstanding feature will unquestionably be the introduction of Coca, and the place which it has taken in modern medicine. Yet it was no new thing when it was brought to this country about sixteen years ago, and the veteran pharmacologist, the late Sir Robert Christison, astonished Europe by the feats in mountain-climbing which he did through the aid of Coca. The octogenarian savant could not be deceived. Physically enfeebled with age, yet mentally clear, his professional knowledge would not admit of deception, and **he knew** that the stimulating Coca warded off fatigue.

As we say, this was no new thing. It had been known in the Home of the Coca Plant for generations nay, for centuries. When the late Charles Darwin, as a young investigator and as naturalist of the "Beagle," visited South America, he had opportunity of observing the effect of the Coca upon his guides and carriers. So painstaking an observer as Darwin, careful to the veriest hair's breadth of accuracy, was not likely to be deceived, and *his testimony stands recorded in favour of Coca.*

But in an open letter to pharmacists it is not necessary that we should go deeply into ancient, yet veritable, history. It is within their own experience that the peculiar active constituent of Coca has done for modern surgery what chloroform has failed to do, thereby conferring incalculable benefit upon mankind. We propose to show that *in Modern Medicine Coca, in the form of Armbrecht Coca Wine*, is equally deserving of recognition.

Meanwhile, a word regarding the Coca plant. Bentley and Trimen tell us that (i.e. *Erythroxylon Coca*, Lamarck) is a shrub 2 to 4 feet high, which is cultivated to a very large extent in the Andes of Peru and in Bolivia and Columbia, especially in the very moist, mild climate met with at from 2,000 to 5,000 feet above the sea level, or higher; it is also now grown in parts of Brazil, the Argentine States, and other countries of South America. Several varieties of the leaf come to Europe, and the great importance of the drug induced Dr. J. O. Hesse to make the drug the subject of a thesis which he presented to the President of the Pharmaceutical Society, when the Hanbury Medal was conferred upon him in recognition of his services in pharmaceutical chemistry. According to Dr. Hesse, we are to recognise the true broad-leaved variety obtained from *Erythroxylon Coca*, Lamarck, which is much cultivated in Peru and Bolivia, and the leaves are known to merchants as "Lima coca," "Huanuko coca," and "Cusca coca." Then there is the Trujillo or Trujillo coca, a narrower and less leathery-leaved variety, of bright colour but with leaves often much broken. This variety is attributed *E. Coca* var. *novagranatense*, Dyer, and it comes from Northern Peru *via* Salvaverry. A third variety appeared in Paris some years ago which Dr. Hesse then attributed to Trujillo, but he now thinks that it was more likely to be from the Java plant *E. Coca* var. *spruceanum*, which is intermediate between the varieties already mentioned. The plant grown in British India is *E. bolivianum*. As a matter of interest we give on the next page a drawing of a branch of the *true coca shrub*, which is so fully explanatory that we need add nothing to the references given therein.

**Armbrecht Coca Wine is a true representation of the valuable properties of the drug.**

# ARMBRECHT COCA WINE.

## IT HAPPENED AT THE OLD HOME

That the following conversation between two Sweeps was overheard, and we have endeavoured to reproduce, as far as possible, the position of the Sweeps and the words, only the Sweep who asks if the Wine was good for Asthma was short, fat, and bent, but the artist has made him thin and erect, and we had no time to get it corrected.

1ST SWEEP.—What goes out in them there Boxes?

2ND SWEEP.—Why, "COCA WINE"!!!

1ST SWEEP.—"COCA WINE." What air that? Good for Hashmer?

2ND SWEEP.—"Hashmer." Why, it's good for heverythink. Had a taste of it when I swept that old cove's chimbley, and jolly fine stuff it is, too.

*Tableau*

*Curtain.*

FOR

*Fatigue of Mind and Body, and Sleeplessness.*

The above is a *fac simile* (reduced) of a new Show Card, designed by G. L. ARMBRECHT, and executed by a famous Lithographic firm, in 16 colours, which will be ready for issue in the early part of November.

ARMBRECHT, NELSON & CO.,  
DUKE STREET, GROSVENOR SQUARE, LONDON, W.

Armbrecht's Coca Preparations have proved most successful to ward off Influenza, and to remove the weakness and lassitude during convalescence.

---

# COCA WINE EXTRACT.

**A SUBSTITUTE FOR COCA WINE,**

Or for making Coca Wine by adding five drops (or more) to Wine.

---

A powerful nerve stimulant. Restores the functions of the digestive organs, strengthens the mental and physical powers, assuages thirst, relieves nervous debility. Given with benefit in cases of opium and morphia habit.

The *North Am. Med. Chir. Review*, March, 1880, has the following :—"This Coca produces a general exaltation of the circulatory and nervous systems, imparting increased vigour to the muscles, as well as to the intellect, with an indescribable feeling of satisfaction . . . and, what is more singular, this state of exaltation is not followed by any feeling of languor or depression."

In small doses it increases appetite and promotes digestion (five or more drops before each meal). In cases of sleeplessness from exhaustion and fatigue it is invaluable, producing a sound and refreshing sleep without producing the distressing sensation so common after OPIATES (five or more drops at bedtime, and repeated once in an hour's time if necessary).

**3s. 6d. and 5s. 6d. a Bottle.**

---

## COCA LOZENGES.

These Lozenges are recommended instead of the wine where it is not convenient to take the latter. They contain the extract of the green Coca leaves, and may be used in cases of *loss of voice* before and after singing and public speaking. Harmless if even used to excess.

DIRECTIONS.—Two or three Lozenges to be sucked whenever desired.

**Price 1s. 6d., 2s. 6d. and 5s.**

---

These two preparations are especially recommended to Travellers, Cyclists, &c.

# ARMBRECHT \* COCA \* WINE.

[This illustration represents the EXACT SIZE of the 4s. 6d. Bottle.]

4s. 6d. a BOTTLE.

48s. PER DOZEN.

"Several preparations of Coca Wine have been placed before the public, but we unhesitatingly accord to the above the first place. Their Coca Wine is more suited to the English palate than some of the continental preparations, which are too sweet to be palatable, and which destroy their otherwise tonic and invigorating qualities by deranging the digestive system or creating nausea. The value of Coca Wine in conditions of debility is too well recognised to require comment, and we need do no more than say that, after a very careful trial of Messrs. ARMBRECHT, NELSON AND Co.'s Wine, we can speak most highly of it as a sound and invigorating tonic, and can recommend it most unhesitatingly."

# **A HIGHER IDEAL.**

## **An Open Letter to the Drug Trade of the English-speaking World.**

GENTLEMEN,

On a former occasion we had the pleasure of bringing before you in AN IDEAL CIRCULAR certain particulars regarding **ARMBRECHT'S COCA WINE**. It would appear from the increased business we have since recorded that you have not overlooked what we had to say. We now aim at A HIGHER IDEAL. We are in possession of our new premises in Duke Street, which are a fine example of the highest architectural skill. Victor Hugo, in his "Notre Dame de Paris," tells how the invention of printing was the beginning of the decadence of architecture. Before the days of printing men were accustomed to express their highest ideals in such writings of stone as the Notre Dame itself. There is now a revival of the old-time custom, and we may fairly claim that the new house in Duke Street tells a story of present-day enterprise which words could not tell better.

As fair an idea of our new house as can be given in a black-and-white sketch is printed in the circular which is facing this page. Please refer to that and read the other pages in the circular. These all appertain to matters which may affect your business as much as they concern ours. There is a steady demand for Armbrecht's Coca Wine, and what we should like you all to do is to anticipate that demand, to stock the brands which are most wanted in your district, and we shall do our utmost in good terms, with a plentiful supply of literature and show-cards, and consistent advertising, to keep the trade a live one.

We are,

Yours faithfully,

**ARMBRECHT, NELSON & CO.**

Duke Street, Grosvenor Square, W.

# ARMBRECHT COCA WINE

## ITS VIRTUES.

A powerful nerve stimulant. Restores the functions of the digestive organs, strengthens the mental and physical powers, assuages thirst, relieves nervous debility. Given with benefit in cases of opium and morphia habit.

**THE ORIGINAL.**—The leaves which we always employ are those of **Erythroxylon Coca**, Lamarck. We select them with the greatest care, and ensure by a thoroughly sound process of manufacture that Armbrecht Coca Wine is a true representation of the valuable properties of the drug.

**THE FAVOURITE.**—The composition of the "medium" wine, which has by far the largest sale of the six varieties, is *our secret*. We introduced this wine, at the suggestion of Dr. Spencer Wells, as a kind of compromise between Malaga, which was generally considered too sweet, and Burgundy, which found some objectors on the score of tartness of taste.

TELEGRAPHIC ADDRESS—"BAYLEAF LONDON."

**“We are bound to admit their great excellence and elegance.”—*Lancet*.**

This statement as to the merits of “Palatinoids” and “Bi-palatinoids” has been endorsed by the medical profession throughout the kingdom. The most perfect methods of medicinal administration ever invented.

**THINK OVER THESE POINTS—**

They bear the usual dispensing margin of profit. They can be swallowed where pills cannot possibly be taken. They are elegant in appearance, accurately dosed and thoroughly reliable. They are much appreciated by patients.

**THEY ARE PROFITABLE.**

The “Bi-palatinoid” forms the ferrous salts absolutely pure. Unoxidised ferrous carbonate phosphate, and arseniate. “A perfect Blaud’s pill” (*Chemist and Druggist*).

**‘PALATINOID’ &  
‘BI-PALATINOID’**

Before immersion in water.

**“PALATINOID”  
OPENED.**

After three minutes’ immersion in water at normal temperature of stomach.

**“BI-PALATINOID”  
(FERROUS CARBONATE)**

**“BI-PALATINOID”  
(FERROUS PHOSPHATE)**

**OPPENHEIMER, SON & CO., LTD., 14 WORSHIP STREET, E.C.**

**A NON-TOXIC ANTISEPTIC FOR BOTH INTERNAL AND EXTERNAL USE.**

**LISTERINE.**

**NON-TOXIC NON-IRRITANT, NON-ESCHAROTIC—ABSOLUTELY SAFE, AGREEABLE, AND CONVENIENT.**

**FORMULA.**—LISTERINE is the essential antiseptic constituent of Thyme, Eucalyptus, Baptisia, Gaultheria and Mentha Arvensis, in combination. Each fluid drachm also contains two grains of refined and purified Benzo-boric Acid.

**DOSE.**—Internally: One teaspoonful three or more times a day (as indicated), either full strength, or diluted, as necessary for varied conditions.

**L**ISTERINE is a well-proven antiseptic agent—an antizymotic—especially useful in the management of catarrhal conditions of the mucous membrane, adapted to internal use and to make and maintain surgical cleanliness—asepsis—in the treatment of all parts of the human body, whether by spray, injection, irrigation, atomization, inhalation, or simple local application, and therefore characterized by its particular adaptability to the field of

**PREVENTIVE MEDICINE—INDIVIDUAL PROPHYLAXIS.**

LISTERINE destroys promptly all odours emanating from diseased gums and teeth. It is a perfect tooth and mouth wash, Indispensable for the Dental Toilet.

**DISEASES OF THE  
URIC ACID DIATHESIS.**

**Lambert's Lithiated Hydrangea.**

**RENAL ALTERNATIVE—  
ANTI-LITHIC.**

**FORMULA.**—Each fluid drachm of “LITHIATED HYDRANGEA” represents thirty grains of FRESH HYDRANGEA, and three grains of CHEMICALLY PURE Benzo-Salicylate of Lithia. Prepared by our improved process of osmosis. It is INVARIABLY of DEFINITE and UNIFORM therapeutic strength, and hence can be depended upon in clinical practice.

**DOSE.**—One or two teaspoonfuls four times a day (preferably between meals).

Close Clinical observation has caused LAMBERT’S LITHIATED HYDRANGEA to be regarded by physicians generally as a very valuable Kidney Alternative and Anti-lithic agent in the treatment of

Urinary Calculus, Gout, Rheumatism, Cystitis, Diabetes, Hæmaturia, Bright’s Disease, Albuminuria, and Vesical Irritations generally.

**R**EALIZING that in many of the diseases in which LAMBERT’S LITHIATED HYDRANGEA has been found to possess great therapeutic value it is of the highest importance that suitable diet be employed. We have had prepared for the convenience of physicians

**DIETETIC NOTES.**

suggesting the articles of food to be allowed or prohibited in several of these diseases. A book of these Dietetic Notes, each note perforated and convenient for the physician to detach and distribute to patients, supplied, upon request, together with literature fully descriptive of LISTERINE and LAMBERT’S LITHIATED HYDRANGEA.

British Agents for the Products of LAMBERT PHARMACAL CO., St. Louis, U.S.

**McKesson & Robbins : Originated 1870 : New York.**

1. Because they are prepared from materials of the highest quality only.
2. Because they are made according to the B.P. or other Standard Authorities, and therefore all the combinations are well tried and of recognised value.
3. Because they are taken pleasantly—being tasteless—and readily, being ovoid in form.
4. Because they are not subjected at any stage of preparation to the injurious action of heat.
5. Because the coating of *pure transparent gelatine* preserves the contents from oxidation.
6. Because they are always soluble, and the contents soft and quickly disintegrated.

[illegible]

*Special Combinations of 3,000 or more Pills made and Capsuled to order for Hospitals, &c., at Special Quotations.*

MESSRS. GRIMWADE, RIDLEY & CO., 7 Union Court, Old Broad Street, London, E.C.

# PULVERFLATOR.

49/- per dozen.

This instrument prevents aggregations of powders from being inhaled or otherwise coming in contact with diseased conditions of the nasal or other mucous membrane passages, and renders such administration more safe and effectual in the treatment of catarrhal rhinitis, hypersecretion, atrophic rhinitis, ozena, ulcerative tubercular laryngitis, &c., or when an alkaline, astringent, antiseptic, or protective effect is required.

## STEARAS COMPOSITUS.

### COMPOUND STEARATES (McK. & R.).

The Compound Stearates, introduced recently to the leading Dermatologists of New York by McKesson & Robbins, are now presented to the Medical Profession at large, with confidence, as powders, which are remarkable for their mollescence when applied to anoint or protect diseased conditions of the skin and mucous membrane.

They are adhesive, and act as grateful vehicles in which drugs may be administered locally.

Desirable as adjuvants in insufflations and antipruritic as dusting-powders, they can be used to cover and protect the surface of the skin, without soiling the clothing, and offer a very profitable field for therapeutic investigation, where the frequently rancid oleates and ointments, or the ordinary soluble and non-adhesive dusting and other powders for the skin and mucous membrane, are not desirable.

### COMPOUND STEARATE INSUFFLATIONS, ETC.

---

“LANOLINE” and its preparations, Soaps, Pomades, &c., can be obtained from

**BURROUGHS, WELLCOME & CO.**

SNOW HILL BUILDINGS, LONDON, E.C.

# SYR. HYPOPHOS. CO., FELLOWS

**CONTAINS THE ESSENTIAL ELEMENTS** of the Animal Organisation—Potash and Lime;

**THE OXIDISING AGENTS**—Iron and Manganese;

**THE TONICS**—Quinine and Strychnine;

**AND THE VITALISING CONSTITUENT**—Phosphorus: the whole combined in the form of a Syrup with a **SLIGHTLY ALKALINE REACTION**.

**IT DIFFERS IN ITS EFFECTS FROM ALL ANALOGOUS PREPARATIONS**, and it possesses the important properties of being pleasant to the taste, easily borne by the stomach, and harmless under prolonged use.

**IT HAS GAINED A WIDE REPUTATION**, particularly in the treatment of Pulmonary Tuberculosis Chronic Bronchitis, and other affections of the respiratory organs. It has also been employed with much success in various nervous and debilitating diseases.

**ITS CURATIVE POWER** is largely attributable to its stimulant, tonic, and nutritive properties, by means of which the energy of the system is recruited.

**ITS ACTION IS PROMPT**; it stimulates the appetite and the digestion, it promotes assimilation, and it enters directly into the circulation with the food products.

The prescribed dose produces a feeling of buoyancy, and removes depression and melancholy; *hence the preparation is of great value in the treatment of mental and nervous affections*. From the fact also that it exerts a double tonic influence, and induces a healthy flow of the secretions, its use is indicated in a wide range of diseases.

## NOTICE—CAUTION.

The success of Fellows' Syrup of Hypophosphites has tempted certain persons to offer imitations of it for sale. Mr. Fellows, who has examined samples of several of these, **FINDS THAT NO TWO OF THEM ARE IDENTICAL**, and that all of them differ from the original in composition, in freedom from acid reaction, in susceptibility to the effects of oxygen when exposed to light or heat, **IN THE PROPERTY OF RETAINING THE STRYCHNINE IN SOLUTION**, and in the medicinal effects.

As these cheap and inefficient substitutes are frequently dispensed instead of the genuine preparation, physicians are earnestly requested, when prescribing the Syrup, to write "Syr. Hypophos. FELLOWS."

As a further precaution, it is advisable that the Syrup should be ordered in the original bottles (4/- or 7/-): the distinguishing marks which the bottles (and the wrappers surrounding them) bear can then be examined, and the genuineness—or otherwise—of the contents thereby proved.

## MIDSUMMER, '92.

ONE OF THE EMPLOYÉES in the Co-operative Manufacturing Firm of BURROUGHS, WELLCOME & Co. has written the following pages relating to the business for the Midsummer Issue of THE CHEMIST AND DRUGGIST.

1 ENCOURAGEMENT

THE gratifying encouragement we have received from the Medical and Pharmaceutical professions, as well as the general public, since we started our business, in our earnest endeavours to turn out the very best products which the best trained labour and improved processes have enabled us to show, still stimulates us to further efforts. The successes which we have attained, the high appreciation accorded to our preparations and appliances, prove to us that we are on the right road. We have to offer our most hearty thanks, and to record our obligations, to many distinguished members of the Medical profession for many valuable hints and suggestions; and no less obliged are we to the many members in the ranks of Pharmacy for their hearty co-operation, and sympathetic support, in placing our products before the public. Naturally, where a success so pronounced as ours is

2 CO-OPERATION

achieved, imitation and misrepresentation are bound to crop up; it is in this direction that we have found the honesty and uprightness of the British Pharmacist standing us in good stead, and it speaks highly for the integrity and honour of the Pharmaceutical profession when we say that rarely—very rarely—do we have to consider any case of wilful misrepresentation and substitution when our goods have been demanded by the public.

3 THANKFUL FOR PAST SUCCESS

WE AIM AT BEING PROGRESSIVE AND CO-OPERATIVE, and we follow this idea not only in our manufacturing departments, where we employ the very highest skilled labour to be obtained, and where experiment—persistent experiment—is constantly suggesting improvement and progressive development, but we endeavour to carry on our business on an up-to-date basis. We believe in short hours, living pay, in profit-sharing, and in sincere co-operation with our *clientèle* throughout the whole civilised world. It is not merely a belief with us; we carry these principles to a practical issue. With our system of short hours, reasonable wage, and profit-division, we are enabled to secure the most intelligent and conscientious service from everyone in our employ, as well as the utmost

4

economy of time and material. As a proof of the interest which they take in the welfare and progress of the firm, we may say that many an improvement and happy suggestion has emanated from the ranks of our employes. We freely and frankly admit that their hearty and valuable co-operation has been a very important factor in the success and growth of our enterprise. As was publicly declared only a few days ago, our operations during the last twelve months have been so successful that we shall be able to double the profit shares to the staff on those of last year. The Pharmacist is our natural and legitimate ally, and we wish to co-operate with him in every reasonable way. We spend thousands of pounds yearly to keep our products and improvements well before the Medical profession, and we endeavour to place the progressive Pharmacist who stocks our preparations in communication with the physician who prescribes them. The high reputation which our products have acquired for excellence and reliability among the Medical profession should be proof to the pharmacist that they are stock which will always be in demand; they form as legitimate a part of his stock as any tincture or ointment, and, as we have said, we sacrifice a large amount of money to keep them well before the Medical public; in a word, we create the demand—the Pharmacist has but to keep them on sale. At this time of day it would be mere waste of valuable space to describe our productions, and to the intelligent Pharmacist who keeps his eye ahead it would be an insult to suppose that he is not thoroughly posted up about them, or not ready to acknowledge their excellence. What we want to do is to bring each other into closer relations, so that we may help each other to our mutual benefit. Those who have been shrewd enough to stock our goods have uniformly assured us that they have found it much to their advantage, and it is not too much to say that there is scarcely a Pharmacy of any pretension or importance in any part of the world that has not accorded to them an honourable place. Why? Simply because they are thoroughly saleable stock, bear a good profit, and their elegance and superior therapeutic value is equal to anything in the higher walks of Pharmacy. If you do not keep our preparations, can you, honestly, be surprised that the Physician who prescribes will direct his patient to patronise another Pharmacy? It is not to be expected that you stock every item on our already extensive list of improved Pharmaceutical products, but you can well keep a fair assortment. The main lever of business, like that of politics, is expediency; what the business man finds greatly in demand is what he keeps. If, then, as we have already endeavoured to state, we create the demand, why should the Pharmacist, who is, we aver, the highest-class educated business man in the whole range of ordinary business men, ignore the first principles of supply and demand?

LARGELY  
ADVERTISED

# THE "TABLOID" FORM OF MEDICATION.

SUGAR  
COATED

A SUCCESS  
FOR  
DISPENSING

HANDY  
AND  
PROFITABLE

The "Tabloid" is a striking and continued success, and the popularity of this method of administration in Medicine has been even more accentuated of late. The combined testimony of prominent physicians, of explorers and travellers of every degree, and of missionaries in their work of civilisation, has helped to make for the "Tabloid" a reputation which will long last. To the physician on his long round of visits, to the explorer in different situations, to the missionary in isolated posts, the "Tabloid" has, indeed, deserved its appellation of being "a boon and blessing." But is it not also a matter of interest to the Pharmacist? It does not in any way interfere with the province he so jealously guards and values—his dispensing. On the contrary, there is nothing he can so expeditiously dispense or with less trouble. And the profit he may derive is not less than that in the ordinary run of dispensing. If the trouble, time, and stock required be factors of any value in computing the price to be charged for dispensing, then we assert that more advantage may be gained by pushing the "Tabloid form" than any other form of dispensary work. But that is not the only advantage. The patient or messenger need not be kept any unreasonable time while the prescription is being prepared; furthermore, the Pharmacist need not be put to the trouble of sending the medicine. Our "Tabloids" are guaranteed to be absolutely correct in dosage and formula—that is, if the most elaborate system of double checking and the utmost care that human hands and brain are capable of can be any tests or proof of conscientious and accurate work, and a certificate of reliability. Our sugar-coated "Tabloids" are the very highest finished form of medicament ever presented to the British or any other public, and deserve the attention of all enterprising Pharmacists, to whom we are always glad to send specimens if they will but apply. Our latest additions to the list of sugar-coated "Tabloids" are—

**FER. ET QUINIAE CIT., ICHTHYOL, QUINIA BISULPH. AND  
SULPHATE, HYDRASTIA COMP., CATHARTIC CO.**

# THE KEPLER SOLUTION

Of Cod Liver Oil in Kepler Extract of Malt.

Not long since a prescription was presented to a respectable Pharmacist in which Kepler's Solution was prescribed. It is scarcely to be credited that considerable doubt existed in that Pharmacy for some time as to what was really meant by "Kepler's Solution." There is but one Kepler Solution, *Messieurs les pharmaciens*. And if it be a question as to whether this preparation of Kepler Extract of Malt and Cod Liver Oil is entitled to be called and classed as a solution, we could easily furnish abundant testimony. We do not know what the definition of the term "solution" might or may have at the hands of accredited *savants* such as Humboldt, Ganot, Tyndall, Crookes, or Huxley. But the well-trained Pharmacist of the present day knows a solution when he sees it, so that we can do without this self-same definition. Every smart and experienced dispenser

IS IT A  
SOLUTION?

WHAT THE  
MEDICAL  
JOURNALS  
SAY OF IT

A HIGHLY  
FINISHED  
PRODUCT

*The Lancet* :—  
"It has hardly  
any taste of the  
oil. Many can  
take it easily  
who cannot take  
the oil."

"The Kepler Solution is the most palatable and easily digested of any form of Cod Liver Oil."—*The Medical Press and Circular*.

is well acquainted with the "knack" of combining Extract of Malt with Cod Liver Oil; he smiles at the suggested difficulty as he drops a few drops of water on the Extract of Malt in the mortar, and, gently circulating the pestle, adds by degrees the *ol. morrhue*. But the result he obtains, however creditable to his *savoir faire* as a dispenser, is not to be compared with the resultant preparation which we are able to place before him after manipulation in our elaborate machinery and by means of centrifugal action. This advantage which we possess in the finished character of the Kepler Solution does not rest here merely; by the same means we are enabled to turn out the most elaborate combinations, which, unlike the products of the dispensing room, withstand the test of time and of varied climatic influences. We do not intend to deal here with the therapeutic value of this combination and its modifications—that is well understood and universally admitted. Our point here is to show that its reputation is undiminished, and that in its manufacture not a point is lost which will enable us to maintain its established excellence.

Supplied to the Trade in  $\frac{3}{4}$  and  $1\frac{1}{2}$  lb. bottles at 20/- and 36/- per doz.

# THE KEPLER MALT EXTRACT.

*Why it is so Popular with the Medical Profession.*

ITS VALUE

*The Medical Press  
and Circular:—“It  
is the most palatable  
and easily digested.”*

*The Lancet:—“It  
is the best known  
and largest used.”*

(as auxiliaries in inefficient digestion, and as correctors in malnutrition) in so many varying cases, and under such widely differing circumstances. Its value once admitted, it becomes really important to know the main characteristics of an ideal Malt Extract such as the Kepler.

## THE COMPARATIVE VALUE OF MALT EXTRACTS.

What is it that constitutes an extract of malt which is scientifically perfect in every respect?

1. It should be prepared from the very best winter barley, and no other cereal but barley, and contain all the nutritive principles of the grain. This is imperative.
2. It should be evaporated *in vacuo*, and not in an open pan. This is indispensable—or, instead of being pleasant, the malt will possess a burnt or tarry taste and smell.
3. No substitution should be allowed—as of other cereals—for a part of the barley, or glucose for a part of the maltose.

THE CHIEF  
POINTS  
OF IDEAL  
EXTRACTS

## THE COMPARATIVE VALUE OF MALT EXTRACTS—cont.

4. There must be absolute purity and an absence of all adulterants.
5. It should be rich in diastase—the digestive ferment which converts starch into sugar.
6. It should be of substantial consistence, or it will be liable to turn sour.
7. If the heat in the process of manufacturing be raised too high, the diastase will be destroyed.
- 8 No fermentation whatever should be permitted to take place, or the maltose will be partially converted into alcohol and carbonic acid, and a kind of beer will result. It will thus be made clear that the therapeutic value of a malt extract will depend not only upon the presence of important food elements—such as dextrin, maltose, and alkaline phosphates—but on the fullest percentage of the peculiarly active substance, diastase, which is mainly concerned in the conversion of the starch of farinaceous food into the more assimilable products.

## NOW, WHAT IS DIASTASE ?

From the elaborate researches of H. P. Wijsman (*Rec. Trav. Chim.*, ix. 1-13) it would appear to be a highly interesting body. The author starts with the assumption that the Diastase of Malt is composed of a mixture of two enzymes—MALTASE and DEXTRINASE. The former converts starch into a mixture of maltose and a dextrin which is coloured violet by iodine, and corresponds to the erythro-granulose of various experimentalists; the latter enzyme converts starch into a dextrin which reduces Fehling's solution, is not coloured by iodine, and which corresponds with the malto-dextrin of Herzfeld, of Brown, and of Morris. Malto-dextrin is converted into maltose by maltase-enzyme, and when dextrinase acts on erythro-granulose a dextrin is formed which does not reduce Fehling's, and is not coloured by iodine: this dextrin the author terms LEUCO-DEXTRIN. M. Wijsman goes on further to prove by experiments that this view is correct; but we have quoted enough, perhaps, to show how absolutely necessary it is to exercise the very greatest care during the manufacture of Malt Extract in regulating the heat employed, so as to protect so highly sensitive a constituent as Diastase from destruction. The Kepler Malt Extract has a world-wide reputation for its high diastatic activity, uniform composition, and superior flavour.

*Kepler Extract of Malt supplied to the Trade in  $\frac{3}{4}$  and  $1\frac{1}{2}$  lb. bottles, at 20/- and 36/- per dozen.*

## Summary.

RECORD BREAKING is the order of the day, and the characteristic of this Summer Number.

THE Quinine Bitters case has been before Mr. Justice Stirling again.

THE Woolwich magistrate has dismissed the summons in the tartaric-acid case.

MR. BELL'S paper is about a very curious hook written by the Dutch physician Dodoens.

PAGES 154 and 155 contain illustrated ideas about shop matters, which are worth carrying out.

OUR Town Traveller has had interviews with a few City firms, and sends in graphic accounts thereof.

MR. J. R. JACKSON writes about the peculiarities of the fruit of *Sterculia scaphigera*, and gives a drawing of it.

EIGHTEEN original formulæ for saleable articles on pages 156-7. Try some of them in the quiet of the Bank Holiday on Monday.

IN "Ink" we give an abstract of an important research on the scientific principles of the manufacture of writing-ink by Dr. Inglis Clark.

GENEVA, Beyrouth, Trieste, Zürich, and the Orange Free State furnish us with fresh material and pictures of English pharmacies there.

IN our correspondence will be found an important piece of information in regard to the reduction of fees payable on renewals of patents.

LABORATORY men will find some useful suggestions in an illustrated note, showing how to make an efficient filter through a tobacco-pipe.

THE market position of carbolic acid is discussed in an Editorial note, which shows that generally at this season the price of the disinfectant rises.

WE report at considerable length the Medical Exhibition which is held at Nottingham this week in connection with the British Medical Association meeting.

A WELL-INFORMED French correspondent gives some striking particulars of the open and fraudulent imitations of English medicinal specialities which are manufactured in Paris.

SOME young druggists are anxious to go into the Army Medical Staff Corps. They will find all about it in a article by one who has served. The corps is not a clover-hed.

IN such a bulky number as this a *soupsçon* of light reading is advantageous. There is some of that in "Nearly Caught," wherein an Irish chemist tells how the gold-chain trick was tried on him.

IN travelling "from Mid to West" a pen-and-ink sketcher of ours has made some pretty pictures of pharmacies in Bristol, Cheltenham, Malvern, Plymouth, and Worcester, which we reproduce.

WE give a good collection of photographic formulæ for preparations such as all enterprising chemists should keep in stock, and separately is a straightforward statement as to what may be expected from this business.

THE article on lady-pharmacists contains the reflections of Mrs. Sinclair, Miss Flora Mitten, Miss Stammwitz, Miss Margaret E. Buchanan, Miss A. Neve, Miss Florence Brittain, Miss Rose Minshall, and Miss M. E. Neve, on their practical experience of pharmacy as an occupation for women. We add portraits of a few of those pioneers in an honourable calling.

EDINBURGH, "mine own romantic town" of Scott, furnishes us with some interesting pharmaceutical reminiscences, which we give in anticipation of the Conference meeting. Portraits are given of Messrs. J. L. Ewing, J. R. Young, Thomas Smith, Peter Boa, and J. B. Stephenson, and of the late John Mackay. Our artist also provides sketches of some of the leading pharmacists.

RUSSIAN PLATINUM YIELD.—It is reported that the yield of crude platinum for the year 1891 from the Ural provinces will exceed 9,000 lbs., or above 3,000 lbs. more than in the previous year.

## English News.

### The Food and Drugs Act in Clerkenwell.

At the meeting of the Clerkenwell Vestry on Thursday night, Mr. Churchwarden Robson presiding, Mr. J. K. Colwell, public analyst, presented his quarterly report, which showed that he had operated upon forty different articles—viz. 22 milk (2 adulterated), 4 butter (all adulterated), 7 gin, 6 whiskey, and 1 mustard (up to standard). Mr. Weston: The Vestry laughed when I suggested that the whisky and gin should be tested, and now I find to my surprise that the public analyst has adopted it. (Laughter.) I sincerely trust that some of the publicans who sell beastly liquors will be made to suffer. (Hear, hear, and laughter.) I know what they are. Mr. Kelly: And not a bad judge. The Chairman: Mr. Weston need not be alarmed; the analyst's report is that the whisky and gin are all right. Mr. Kelly: Yes, absolutely pure. Clerkenwell has the finest the world can produce. (Laughter.) Mr. Edenborough (a licensed victualler): Is it right for the inspector to send other people into your house to purchase the goods, and then come in afterwards to say he is going to have it analysed? The Chairman: The inspectors follow the orders under the Sale of Food and Drugs Act. Mr. Edenborough: But the whisky was purchased in my house, taken outside, and then brought back again. The Chairman: The usual custom is for a stranger to be sent to make the purchase, and then for the inspector to come upon the scene as the purchase is being completed. The analyst's report was received.

### Henry Lamplough (Limited).

The seventh ordinary general meeting of the shareholders of Henry Lamplough (Limited) was held at the Cannon Street Hotel, E.C., on July 22, Mr. William H. Gibson, F.C.S., presiding. In moving the adoption of the report, the Chairman said the present board took office in 1888, the goodwill account stood at 32,500*l.*, and since then 2,500*l.* had been written off that account. The whole of the preliminary expenses had also been written off out of the profits. In 1889 they borrowed money on their freehold property, but that had since been paid off. They had now 3,000*l.* invested in Indian stock, from which they received 3½ per cent. If they could employ that in the business he believed their profits would considerably increase. During the year the board had opened new premises in Monkwell Street, which he believed would prove a profitable investment. The directors proposed to find other premises in order to increase their receipts. The net profits amounted to 3,944*l.*, and the board recommended a dividend of 8 per cent. per annum. The motion was seconded and carried. Mr. Myer Salaman was re-appointed a director, and Mr. Gribbon was re-elected an auditor.

### A Saturday-night Customer.

A man named Legg was charged at the Gravesend Police Court with having attempted to commit suicide. Mr. Edward Millhouse, chemist, of New Road, said that on the previous Saturday evening the prisoner walked into his shop and went through into the yard. Witness called him back, and asked what was the matter with him, and he said he was stabbed. Failing to elicit any further information from the man, witness sent for the police. He saw the wound, which was a very small one—in fact, the skin was only just severed. Superintendent Berry stated that early on Saturday the prisoner came to the station and said he was being followed, and that he was wanted for an offence at Chatham. He was detained while the police at Chatham were communicated with, but it was ascertained that his story was not true. Prisoner was excited when he came to the station, but he soon quieted down. Prisoner had nothing to say. He did not recollect the whole of the circumstances. He had a similar attack fifteen months before, but he did not then attempt to do himself any harm. He was discharged on promising not to repeat the offence.

### Company Dividends.

The directors of the Bovril Company have declared a dividend at the rate of 10 per cent. per annum for the half-

year ending June 30 last, making, with the interim dividend paid in January last, 7½ per cent. for the year.

The directors of Jeyes' Sanitary Compounds Company (Limited) have declared an interim dividend at the rate of 8 per cent. per annum for the six months ended June 30, payable forthwith.

### The Institute of Chemistry.

At the examination in practical chemistry for admission to the Institute, held from Monday 11 to Friday July 15, thirty-seven candidates presented themselves, of whom the following nineteen were successful:—

Mr. E. C. C. Baly, Mr. F. J. Bloomer, Mr. A. C. Chapman, Mr. J. C. Chorley, Mr. F. Dent, Mr. F. E. Francis, Mr. A. F. Fryer, Mr. F. J. Hambly, Mr. E. E. Johnson, Mr. T. Kendrew, Mr. C. Leigh, Miss E. J. Lloyd, Mr. H. H. Mann, Mr. C. H. New, Mr. T. H. Norris, Mr. W. Orr, Mr. N. S. Rudolf, Mr. W. D. Sawers, Mr. A. E. Wareing.

### Cricket.

A match was played on Saturday, July 23, at Newsham Park, Liverpool, between an eleven representing Messrs. R. Sumner & Co., of that city, and a team of cricketers from Messrs. James Woolley, Sons & Co., of Manchester. The visitors went in first and scored 109, towards which J. Franklin contributed 55. Sumner's team responded with 70, the top scorer on their side being H. Kruger, who made 24. The visitors were subsequently entertained to tea by the Liverpool players.

### The "Vinolia" Girls.

The proprietors of "Vinolia" soap are sending over a hundred poor children for two weeks into the country, most of whom have never seen the green fields before. Next year Messrs. Blondeau et Cie. hope to send not less than a thousand. They are giving every employé in their soap-factory at Malden Crescent, London, and at their warehouse and offices at Ryland Road, London, a vacation of not less than two weeks. They employ a large number of young girls as piece-workers, all of whom are to have two weeks' vacation and wages. It may be observed incidentally that these girls work forty-six hours per week, and on the finishing-floor is a piano for their use during the noon hour and quarter-hour reserved for afternoon tea. The firm provide a library containing works of fiction, &c., and contemplate establishing a reading-room and gymnasium. There is a sick-club composed of all the employés, so that in case of illness each one is provided for.

### Society of Chemical Industry.

The annual meeting of this Society was concluded last Friday by an excursion up the Thames as far as Cliveden, the seat of the Duke of Westminster. Train was taken from Paddington to Windsor, where the Castle and St. George's Chapel were visited, a special organ recital being one of the attractions in the latter place. After luncheon in the Town Hall, steam-launches were used to convey the party up the river. It was in all respects a delightful afternoon, everything being well-arranged, and no mishap marred the pleasure of the day. Tea was served at the summer-house of Cliveden, and the party returned to Taplow by launch as far as Boulter's Lock, then walking, and meeting the train at Taplow Station. More than four hundred joined the excursion.

### Cheap Sulphate of Iron.

At Tuesday's meeting of the London County Council, the Main Drainage Committee reported that they had received a letter from Messrs. Kraye, Back & Co. offering to supply, at 2*s.* per ton, about 200 tons of proto-sulphate of iron, of the quality required by the Council's specification, which they now had on their hands at Swansea. This being a very advantageous proposal for the Council, the committee had instructed the Chemist to accept the same. The Council approved.

### Festivities.

Messrs. Potter & Clarke's annual excursion and dinner took place on Saturday last at the Crown Hotel, Broxbourne. The company numbered between thirty and forty, and, besides an excellent dinner, a cricket-match, boating ex-

cursions, and a smoking-concert were in the day's programme.

The annual outing of the Sidcup tradesmen took place at Lillingstone Park and Westerham. At the dinner, Mr. W. Wade, chemist and druggist, of Clyde Terrace, Sidcup, presided.

#### An Unholy Alliance.

There is a good deal of soreness among the chemists and druggists of Cardiff on account of the action of Messrs. Hicks & Co (Limited). A few days ago an American quack, travelling under the name of De Winton, commenced lecturing from a two-horse brake in the Hayes. He sold no medicines; but, after descanting on the virtues of certain oils and pills for rheumatism, dyspepsia, &c., he informed his auditory that they might be obtained at Messrs. Hicks' druggist's shop, in Duke Street. What makes the conduct of this firm the more incomprehensible to the trade is the fact that two of the directors are well-known physicians—Dr. Sheen and Dr. Naunton Davies. To assist the sale of the medicines, a "black," in gold-braided livery, perambulates in front of Messrs. Hicks's shop distributing handbills.

#### The Welsh Lunacy Inquiry.

The question of how the costs of the inquiry into the alleged insanity of Mr. John Lloyd Davies, of Haverford-west (whose father formerly carried on business as a chemist and druggist in that town), should be defrayed, came on Monday before Lords Justices Lindley and Lopes. The lunacy proceedings were instituted by Mrs. Powis, sister of Mr. Davies, and after several days' inquiry, the jury found that Mr. Davies was quite sane, and capable of managing his own affairs. The Court has ordered that Mrs. Powis should pay all the costs of the inquiry.

#### Some Poisonings.

Mrs. Hopper, of the Shakespeare Hotel, Consett, was ill. Her sister was nursing her, and in the night gave her carbolic acid instead of medicine. The lady died.

An old man at Leicester bought 1½ oz. of laudanum from Messrs. J. Butler & Son, chemists—"to quieten a young horse," he said. He committed suicide with it.

Mrs. Dockwray, of South Shields, wife of a confectioner, bought some carbolic acid from Mr. J. T. Riddle, chemist, and poisoned herself with it. The bottle was duly labelled.

A child, 18 months old, the son of a shoemaker, at Littleport, Cambridgeshire, got into the garden and pulled some aconite-flowers, and sucked them. This caused his death.

A domestic servant has been before the Southport magistrates on a charge of attempting to commit suicide. She had swallowed 1½ oz. of carbolic acid, and, after long treatment, had recovered. She was sent to the workhouse for fourteen days, that the state of her mind might be inquired into.

Mrs. Buddon, of the Castle Hotel, Liscard, poisoned herself with carbolic acid on Saturday last.

### Irish News.

#### Healthy Dublin.

Sir Charles Cameron, Public Analyst, Dublin, states that owing to the favourable sanitary conditions of the city, as well as the copious supply of pure water—the pumps having fallen into disuse—the citizens may count on an immunity from cholera however near it approaches Ireland.

#### Contracts.

Messrs. Harrington & Sons, Cork, and Messrs. Corcoran, Dublin, have been appointed contractors to the New Ross Union for the supply of drugs and surgical appliances. The Ennis Guardians advertise for a year's supply of drugs, medicines, medical and surgical appliances.

#### Good Contractors.

In his quarterly report just submitted to the County Antrim Grand Jury, Professor John Hodges, F.I.C., states that out of a number of drugs, &c., analysed since the Spring Assizes, he has not found one to be impure.

#### The Way to Enforce the Pharmacy Act.

A Limerick chemist, writing in the columns of the *Dublin Independent*, proposes to "wipe out" the unqualified dispenser by reporting to the Medical Council those doctors who send their prescriptions to be made up by pharmaceutical "hangers on." This remedy, the writer says, would quickly put an end to the evil.

### Scottish News

#### The Chemist's Divorce Suit.

At the Outer House of the Court of Session, Edinburgh, on July 20, the action was further heard of James Ballantyne Hannay, manufacturing chemist in Glasgow, against his wife, Mrs. Caroline Johnston, or Hannay, residing at Cove Castle, Loch Long, Dumbartonshire, and others, the trustees under certain deeds, and concluded for reduction of a disposition by the pursuer in favour of Mrs. Hannay, by which he disposed to his wife Cove Castle and grounds; and a trust deed conveying to his wife the household furniture, &c., in Cove Castle, and the stocks alleged to belong to her—the trustees to hold the trust estate for behoof of Mrs. Hannay in life-tenant, and on her death the pursuer to have the life-rent of the remaining trust estate. Reduction was also sought of gifts of 2,000*l.* shares of Hannay's Patents Company, made by the pursuer to his wife, and a gift of 24,500*l.* made by him to her in 1883. It was intimated that the action had been settled, and a joint minute was lodged, in terms of which defender is found entitled to absolver and expenses.

#### Accidental Poisoning and Insurance Policies.

An action was recently raised in the Court of Session by the trustees of the late John Baird, French-polisher, Howard Street, Glasgow, against the Scottish Accident Insurance Co. (Limited), for recovery of 1,000*l.*, the amount for which Mr. Baird's life was insured with the defendant company by general accident policy. The plaintiffs averred that the deceased, upon July 20, 1891, while staying at Ardnadam, Argyllshire, took from a cupboard a bottle which he believed to contain whisky, and under that impression swallowed some of the liquor it contained. The liquor really was solution of ammonia, which produced excoriation of the mouth, gullet, and stomach, from which he died three days afterwards. For the plaintiffs it was maintained that the death was the direct consequence of an accident within the meaning of the policy. The defendants, on the other hand, held that the death was not caused by a risk insured against, and they averred that it was impossible for Baird to have mistaken the ammonia for whisky if he had been in his proper senses. A settlement has now been arrived at under which the insurance company pay plaintiffs 500*l.*, each party paying their own expenses.

#### An Oban Guide.

Mr. Samuel Lawrence, chemist, Oban, sends us a copy of his Oban Visitors' Guide. He says he will be delighted to be of any service to those chemists who, when north at Edinburgh at Pharmaceutical Conference next month, may go on to Oban. He means in the way of finding hotel or lodging-house accommodation for them, and giving them particulars of the various tours from Oban—the Charing Cross of the holidays.

#### Sudden Death of a Chemist.

On Tuesday last week, Mr. Robert Mason, chemist, Johnstone, was found in an unconscious state lying on the floor of a room at the back of his shop, and, in spite of medical assistance, he died the following morning, convulsive fits having preceded his death.

PLUMBAGO-MINES have been discovered along the south-west coast of India, and are apparently a continuation of the Ceylon veins. Their output is small compared with the latter, and Ceylon plumbago is of infinitely superior quality.

## French Pharmaceutical News.

(From our Paris Correspondent.)

**PROTOIODIDE OF CARBON.**—M. Henri Moissan, in a paper on this novel compound, states that he has obtained it by exposing tetraiodide of carbon to the action of the sun's rays. It is of great stability, resisting boiling nitric acid, and melts at 185° C.

**ROBINA NICOU.**—M. Chatin states that this is a poison extracted from one of the lianas, or rope-like creepers, which festoon the virgin forests of Guiana. The aborigines, he says, throw this substance into the rivers, and the fish for yards around rise to the surface dead. The curious point is that these finny victims of savage science may be eaten without danger.

**CHEMISTS IN IT.**—M. Hilaire, pharmacist-in-chief of the French colonies, has been nominated Chevalier of the Legion of Honour. M. de Boissien, of the Laboratory of Organic Chemistry at the Sorbonne, and Professor Béhal, of the Superior School of Pharmacy, have been appointed by the Minister of Commerce and Industry to study the petroleum deposits in Roumania. Another gentleman from the School of Pharmacy, M. Hunkiabeyendian, is to accompany M. Paul Berthod to Turkey, to examine the system of medical instruction there.

**PRECAUTIONARY MEASURES AGAINST CHOLERA** are the order of the day. The following mixture has been prepared for the employés of the Administration des Pompes Funèbres, which monopolises the funerals in the French metropolis:—

|                           |    |    |             |
|---------------------------|----|----|-------------|
| English pepper mint oil.. | .. | .. | 12 drops    |
| Sydenham's laudanum ..    | .. | .. | 12 grammes. |
| Sugar ..                  | .. | .. | 200 "       |

Dissolved in 1 litre of a mixture of 4 parts alcohol (36°) and 6 parts of water.

A liqueur-glassful of this is taken by each employé before going to the funeral of any person where cholera is proved or suspected. The fact, officially stated, that since 1852 not a single employé of this funeral agency has died of cholera, in spite of their enforced daily contact with corpses of all classes, indicates the efficacy of this preventive.

**NEW BONE-FORMING PROCESS.**—Professor Duplay, of the Paris Faculty of Medicine, and Dr. Cazin have discovered a new use for iodoform gauze. In a paper read at the last meeting of the Academy of Sciences, they stated that they had experimented on twenty-nine rabbits and thirty dogs with a view to discover a bone-forming process. It is well known that in certain tuberculous and syphilitic disorders the interior of the bones is eaten away by the malady, leaving cavities which are with difficulty refilled, especially if the patient be elderly or of weak stamina. Dr. Duplay's beca-tomb of four-footed victims, sacrificed at stated periods, had shown him that this refilling process may be considerably hastened by filling the cavity with a spongy or aseptic substance, such as iodoform gauze. This is rapidly encrusted by the new osseous formation which clings to it. The gauze almost disappears when the new growth of bone is complete.

**OLD TRICKS LIVE.**—An individual entered a pharmacy in the Faubourg Montmartre a few days ago and asked for three bottles of a certain liqueur, which was not in stock. The pharmacist promised to obtain it, and did so, but his would-be customer never returned. The pharmacist accordingly went to the druggist and asked him to take back the liqueur, but met with a blank refusal. He was pressing the point, when two or three other pharmacists entered on the same errand. The warm discussion of the victimised persons and the druggist was interrupted by the entrance of the laboratory assistant, whom the pharmacists recognised as their bogus customer. An adjournment to the police commissary's was at once made, and M. Mouquin's inquiries proved that the druggist who had adopted this novel method of advertising his speciality also gave free consultations. But as he had omitted to go through the form of obtaining a medical degree or pharmacist's diploma, he will be summoned to appear before the authorities on a charge of illegal practice of medicine and pharmacy.

## Foreign and Colonial News.

**THE EXTERMINATION OF POISONOUS PLANTS.**—The District Councillor of Lübben, Germany, has issued a proclamation calling attention to the frequency of cases of child-poisoning caused by the eating of toxic plants, such as henbane, deadly nightshade, hemlock, stramonium, &c., and instructing all local authorities to proceed at once to the extermination of all such dangerous forms of vegetation within their respective districts.

**UNITED STATES TRADE-MARKS.**—The following marks were registered at Washington on July 5:—"Cafrobromalid," for antipyretics and sedatives, by Charles Truax, Greene & Co., Chicago; figure of a cow's horn, for a liniment, by A. Horn, Buffalo, N.Y.; figure of two heads (boy's and girl's) for a diphtheria-specific, by Hunt & Co., Salt Lake City; "F. & D. Racicot's Indian Remedies" and a shield with an Indian thereon, for medicinal remedies, by F. & D. Racicot, Sherbrooke, Canada; "Solid," over figure of a block, for medicine in tablets, &c., by Louis A. Matos, Philadelphia; figure of a sheep on an oval design, for a diphtheria-remedy, by D. Peraza, New York; "The Swiss Cure for Rheumatism" on a label, for the same, by the Swiss Medicine Company, San Francisco; "Opera Cream," for a cosmetic, by J. Greyer Cincinnati. The following marks were also registered at Washington on July 12:—Figure of a powder-horn, for a tooth-powder, by W. E. Burrows, Providence, R.I.; "Keystone," for gelatine capsules, by J. W. Gedney, New York; "Melol," for castor oil, by Indianapolis Drug Company; "Nada," for perfumes, &c., by Ladd & Coffin; "Globe," for hair-restorative and dandruff-cure, by H. D. Wagner & Co., Grinnell, Iowa; "A New Idea," for a disinfectant, by Emma R. Farren, Paterson, N.J.; "Herbal Tonic, or Flockmaster's Friend," for veterinary medicines and preparations, by Stephen Pettifer & Son, Creedwell, near Malmesbury, Eng.; "Odorless Deodorizer," the first "O" and first "D" of the words being enlarged and enclosing the remaining letters of the words, respectively, by Sanford G. Plumb, New York.

## INDIAN PHARMACEUTICAL NEWS.

**DIVIDENDS.**—Badham, Pile & Co. (Limited), of Secunderabad, pay 10 per cent. dividend. The report says that their Secunderabad branch is improving under new management.

**PHILLIPS & CO. (LIMITED),** of Bombay and Poona, in their seventh annual report (dated May 31, 1892) show a net profit of 57,000r. on a capital of 500,000r. Their working expenses amounted to 80,000r. at Bombay, and 30,000r. at Poona; salaries were 36,600r. at Bombay, 20,300r. at Poona.

**BUSINESS CHANGES.**—Mr. V. Tepermall Chetty has opened a shop in Popham's Broadway, Madras, under the name of Barron & Co. Mrs. M. A. Pollard and Mr. G. W. Rose, trading as Symes & Co., of Simla and Meerut, have dissolved partnership; they have disposed of their Meerut shop to Howard & Co. As anticipated, the Army and Navy Stores have opened a chemist's branch in Bombay.

**THE BRITISH MEDICAL MUSEUM** exhibitors have organised a smoking concert, to be held at the Clarendon Hotel on Thursday evening, at which the Sheriff of Nottingham will take the chair, and the Chief Constable the vice-chair. The selection of presidents appears to be a trifle extraordinary, for we saw nothing about the conduct of the prospective smokers which calls for the presence of so eminent criminal authorities. We imagine, however, that the Sanitary Exhibition behind the Guildhall has something to do with the selection. Our reporter had a walk through that exhibition, which is to be open for two months; but drain-pipes, improved water-closets, and things like that were the principal items, and, as yet, the drug-trade has only a general interest in these.

#### ADVERTISING *v.* TRAVELLING.

"No Travellers Employed" is one of the principles on which Messrs. May, Roberts & Co. conduct their business. Travellers among druggists are first-class men, esteemed by their employers and by their customers alike. No word against them may be printed in these pages, but we cannot help being aware that THE CHEMIST AND DRUGGIST is a traveller against which none of them can compete. It is calling every week on the chemists in Aberdeen, Buenos Ayres, Calcutta, and so right through the alphabet, *via* Jamaica and Madagascar, to Zermatt and New Zealand. But this paragraph is to be about May, Roberts & Co., not about THE CHEMIST AND DRUGGIST. So our own Traveller [there's a chance for the critic to scoff at our inconsistency], being in the Clerkenwell Road the other day, called on Mr. Roberts to see how was business with the firm which employs no travellers.

"You are going Nap in our Summer Number, Mr. Roberts!" ventured our man, referring to the extensive price-list which the firm are inserting. Mr. Roberts is a member of the Society of Friends, and we are not sure whether he understood the allusion. Anyhow, Nap. has no place in his thoughts during business hours, for no man in London attends to his business more closely than he.

"I was a good deal encouraged by the result of the shorter price-list I put in your Winter Issue," he said, "so I thought I would do it this time pretty thoroughly."

"Do you have no travellers in any form?" was asked next. "No travellers or agents of any kind whatever," said Mr.

Roberts. "Come through and see the way we do our business."

This was said in the showroom, a space in the front part of the ground floor, far too small to effectively exhibit samples of the multifarious stock of a druggist's sundriesman, and scarcely worthy, if we may say so, of the big warehouse above, below, and around. The goods shown are, however, arranged very neatly, and the specimens are more complete than one would expect from a first glance. There were no particular novelties on hand at the moment, so we passed through the offices, where between twenty and thirty clerks were busily engaged—an index to the flourishing condition of the business with "no travellers." Eight youths at one desk are occupied in dissecting the morning's orders and making out sheets for the various departments—sundries, P.M., drugs, or glass. Every order gets its registered number, and this number and the departments engaged on it are intimated on another sheet to the packing department. The packers call for the goods from the several departments as they are ready to pack, and the general sheet, which has been the round of the sections, after two checkings, becomes the day-book entry. The system seems elaborate, but is simple in working. The variety of articles ordered from a sundries house necessitates a careful attention to details. Every queer thing asked for over hundreds of counters throughout the United Kingdom during the day comes into these sundry orders. The result is that May, Roberts & Co. have to keep no fewer than eight messengers constantly employed in collecting from London houses the odd things required to fill every day's orders.

Messrs. May, Roberts & Co.'s warehouse consists of two floors below the ground floor, and three above it, six floors in all, each of 3,000 square feet of superficial area. At the very bottom are the empties and the original packages—as, for instance, a ton of vaseline, 10 or 20 gross of Eno, and so forth. On the upper basement are the glass and earthenware. The offices and packing departments are on the ground floor. The patent medicines and proprietary articles, including British, American, and French proprietary goods, are on the first floor, the sundries on the second, and the drugs are on the top. There also goods such as seidlitz powders, fuller's earth, &c., are packed, castor oil and glycerine are bottled, feeding bottles are put together and boxed, a staff of girls doing most of this work. All these floors are closely packed with stock, classified in nests which reach to the ceiling, with only narrow avenues between each row. Our Traveller returns to Cannon Street in a chastened frame of mind, for he has discovered that, however valuable he and his class may be, it is quite possible for large businesses to be built up and carried on without their aid.

#### F. DARTON & Co.

Our representative looked in at F. Darton & Co.'s new works in St. John Street, Clerkenwell, another day, and had an interesting chat with Mr. J. G. Phillips, one of the partners. It is now some months ago since the firm finally quitted their old quarters and installed themselves in the handsome, well-lighted premises where our representative called, but they have not even yet had time to put everything straight, so busy have they been with orders. The export trade is their strong point, the greater part of the goods they manufacture being sent out of the country. "We try to do as much manufacturing work ourselves as we can," said Mr. Phillips, as he showed us through the workshops, pointing out a bench at which several men were busy turning wood for barometer-cases. Our man, when he entered the shop, had been particularly attracted by some very handsome wood cases, and, being accustomed to look upon all turned woodwork as having been made in Germany, had wondered inwardly in what part of the Fatherland the Messrs. Darton contrived to get such good work done. The offices and workshops are fitted throughout with electric light. "Our own installation," said the head of the firm, as he showed the way down to a cellar where the storage-cells were kept. "We charge the cells every fortnight, and have sufficient power here to run two hundred lights if we needed them." "We are the only firm in our trade in London," he continued, "who have their workshops fitted with electric light. We find it an immense convenience, and well worth the outlay. This cellar, where we are now standing, we knew nothing of until we had been in the house for several

weeks, when its existence was revealed to us by the accident of one of our workmen falling through the trap-door. The cellar had, apparently, been forgotten by the vendor of the premises. They had been empty for eight years, and we spent about 1,600*l.* in fitting them up."

From the cellar we ascended to the mounting department, where several hands were busy manufacturing small aneroids and other thermometers. The divisions are all marked by machinery, three dividing-engines being kept on the premises for this purpose; the figures, of course, being traced by hand. Even now, when the season is comparatively slack, Messrs. Darton & Co. dispose of eight or nine gross of clinical thermometers a week, and during abnormal times—for instance, while the influenza scares were prevalent, they could hardly keep pace with the demand.

#### CALENDARS FOR 1893.

In response to the invitation of Messrs. Hildesheimer & Faulkner, our representative also called at their showrooms in Jewin Street to inspect their designs for calendars for 1893. The very high-class work which this firm produce has been brought to the attention of chemists and druggists through this journal, and Messrs. Hildesheimer & Faulkner seem very well satisfied with the result. They find that chemists appreciate their productions, and they think the custom of distributing an artistic reminder of one's existence

is growing in the trade. Calendars on cards and in booklet forms with charmingly designed fronts, some with tiny diary spaces, and with the backs left blank for an advertisement, are features of the firm's stock. Blotters of various sizes, with one of the beautifully-tinted chromographs on the front cover, are found to be very acceptable gifts. So are the calendar cards with a well-made pocket for letters, to hang on the wall. Calendars with mouthly and daily tear-offs, and perpetual calendars in boxes, are also sometimes given. Similar designs are produced for advertising-cards, from a quarto down to an envelope size, and boats, newsboys, cats, dogs, and clowns, with crunningly-devised spaces for advertisements, are favourite media for bringing some special article under the notice of the public.

#### THE DUKE AND THE DRUGGIST.

Wandering westward one Saturday afternoon recently our Traveller came upon Duke Street, Grosvenor Square. This is the locality where, it was said, a few years since, the Duke of Westminster was exercising his gigantic powers as a landlord with such cruel tyranny. The grievance was that tradesmen who had made a business in the street were to be turned out as their leases expired to make room for improvements. It is true the Duke's agent undertook to do his best to find each such tenant new and better premises in the immediate neighbourhood; but it was felt that this would be an act of grace, and that the contract between

landlord and tenant did not involve this necessity. Mr. Armbrecht, the chemist and coca-wine maker, was one of the victims whose case excited some attention in the press at the time. It is satisfactory to report that the alarm raised has not been justified; the feudal system, moderated, perhaps, to a small extent, by the halfpenny papers and *THE CHEMIST AND DRUGGIST*, works well in Duke Street. The Duke of Westminster is carrying out his improvements, and the thoroughfare will be one of the handsomest in the West End of London. The tenants seem to have been treated with every consideration, and their new homes will be far more healthy and comfortable for them than their old ones. Room has been made, in addition, for numerous blocks of beautiful industrial dwellings, the land for which is let at far below market value. A city chapel of historic interest has found a home in the street, and three chemists—Messrs. Squire, Burden, and Armbrecht—are already located there. Mr. Armbrecht still carries on his chemist's business in an old-fashioned shop with which he was accommodated when his former place was demolished; but he has already moved the greater part of his coca-wine business to the new premises a little nearer Oxford Street, which he has built on ground leased from the Duke. Mr. Armbrecht has by his advertisements familiarised chemists with the imposing architectural design of the new home of the coca-wine. In its external features this had to correspond with the rest of the street; internally, each tenant may adopt such arrangements as will best suit his business. Mr. Armbrecht's building has cost some 10,000*l.* He will have for his money a handsome shop, splendid cellarage, packing, office, and warehouse space for the wine business, and a luxurious home. Mr. Armbrecht has not been many years establishing this business, and it must now be a very considerable one. In the cellars, when our traveller visited them, there were at least 10,000 gallons of the prepared wine in barrels, not to speak of the stock in bottles and the wine which had not been cocatized. No doubt Mr. Armbrecht takes the largest slice of the trade in this article; but he does not exclusively monopolise the business, and the moral which occurs to us is that chemists ought to see that the modern tendency to take some medicines in vivous combination should work to their benefit, rather than to the advantage of the wine dealer. In other words, it seems to us that the medicinal-wine trade is now important enough to chemists to make the licence almost a necessity in good-class businesses.

Before leaving, conversation turned on the past and present methods of learning the pharmaceutical business. Mr. Armbrecht was, as may be assumed from his name, apprenticed in Germany; his master lived at Hamburg; and he was a master worthy of record. Mr. Armbrecht showed us a series of volumes filled with manuscript records of his studies during his apprenticeship. This one contained reports of lectures on the elements of chemistry; the next, descriptions of botanic specimens gathered in early morning excursions; another, notes on pharmaceutical work; another, studies of *materia medica*; and so on. The master would never allow his apprentices to take notes during a lecture; but, on returning home, each had to write out his report of what he had learned, with diagrams of apparatus and representations of formulae. To most of these some slight correction or addition appears in the master's handwriting. And this system was carried through all the subjects. Every alkaloid and nearly every chemical was made on the premises, if not for business purposes, as experiments. Our interviewer forgot to ask if the master made a fortune; but he left with the conviction that an honourable recognition and a persistent performance of duty were not exclusively English qualities.

#### JOHNSEN & JÖRGENSEN.

Messrs. Johnsen & Jörgensen have recently fitted up a new showroom for their glass bottles, and our Traveller went to have a look at it also. The showroom occupies the better part of the second floor of the nice old house in Savage Gardens (not so many years ago the dwelling-house of a City merchant) in which the firm have their offices. Bottles are ranged upon stands and in showcases all along the sides of the apartment. They are all samples, no two alike; and as there must be at least 1,500 altogether, the buyer who could leave Johnsen & Jörgensen's showroom without having found anything to suit him must be really

too difficult to be worth cultivating. The firm now represent twelve glass-bottle works in Sweden, Denmark, Germany, Belgium, and France, for whom they sell in this country and in the colonies. These works form a syndicate among themselves, and their agents who receive the orders allot these for execution to the various works, according to their capacity. The glass-bottle department, Mr. Jørgensen told us, has grown to such dimensions that it now occupies the whole time of one of the partners. The colonial trade is particularly brisk, but the system of the firm is not to deal directly with colonial buyers, but to pass all orders through shipping firms in this country. Samples, indeed, they are willing to send out direct, but, for the rest, "live and let live" is their motto. There is always something new coming out in bottles, though it is probably more difficult to introduce novelties among English buyers than among any others. Just now a new oil-bottle is all the go. To the inexperienced eye it looks very like any other oil-bottle, but to the practical man it possesses the important advantage of being "turned" instead of "firm blown"—that is to say, the molten glass is turned round and round by specially experienced workmen, whereby the bottle assumes much greater evenness of make, and the rim, always perceptible on firm-blown bottles, is done away with. Beer- and wine-bottles are the principal lines with the firm so far as quantity goes; after that come chemists' bottles. The beer-bottles come mostly from Sweden, mineral-water and hock bottles from Germany and Belgium. One of the ugliest bottles in the lot, it seemed to us, was the Gilka bottle—a big amber-coloured, octagon, round-shouldered production, of very uneven metal (apparently blown so on purpose). It derives its name from a liqueur much affected by the natives of certain parts of Germany, and if the contents are as ill-favoured as the flask we may think ourselves lucky that neither the one nor the other has been able to find a footing in this country.

As our representative passed his eye along the solid battalions of amber, blue, green, white, and golden-coloured bottles for a last impression of their diversified shapes and uses, he was attracted by two small-sized ones—one octagon and amber, the other oval and white—which seemed to him particularly attractive. The inscription "Sequah—usage externe," blown upon the side of one of them, at once revealed its use. Not long ago Sequah ordered 2,000 gross of the amber kind.

## Personalities.

MR. BOSTOCK HILL has been appointed analyst to the Warwickshire County Council at a salary of 350*l.* per annum.

MR. A. H. FERRIDAY, chemist and druggist, Oakengates, Salop, has purchased the business of Mr. R. H. Shaw, of the same place.

MR. WILLIAM DUNCAN, of Hill Street, Clapton Common, has acquired the business of Mr. Mundy, and will carry on the same at that address.

MR. JOHN R. GILMOUR, eldest son of Mr. William Gilmour, Edinburgh, has just passed the second M.B. examination of the University there with "distinction."

MR. JOHN HALLAWAY, pharmaceutical chemist, is about to remove the business he has carried on for many years at Carlisle to more central premises in Devonshire Street, Carlisle.

DR. WALTER H. INCE, who for some time has been a chemistry demonstrator at Liverpool University College, returns to London to take up a similar position in St. Thomas's Hospital Medical School.

MR. J. CANN, pharmaceutical chemist, of Lawfield Street, Dartford, has been appointed by the Dartford Rural Sanitary Authority to supply the disinfectants required for use in all the districts of the Union.

## DEEDS OF ARRANGEMENT.

The following deeds of arrangement with creditors have been filed at the Bills of Sale Office, under the provisions of the Deeds of Arrangement Act, 1867. Some of these deeds are for the purpose of carrying out compositions with creditors (and such are specified below), but the great majority of them are "assignments" in the ordinary form, to a trustee or trustees, for the benefit of creditors. The Act referred to expressly provides that registration shall not give validity to any deed which is an act of bankruptcy, and there is no provision in the Act making any of these arrangements binding upon dissenting creditors.

Wheeldon, William Henry, High Street, Knighton, chemist, druggist, seedsman, ale, beer, porter, and wine merchant. Deed of assignment for the benefit of creditors. Trustee—Edward Oldbury, High Street, Knighton, grocer and provision dealer. Dated July 19, 1892; filed July 21, 1892. ## Gazette.

### THE BANKRUPTCY ACTS, 1883 AND 1890.

#### ADJUDICATION.

Sinclair, Kate (carrying on business as the Sayd's Challenge Remedies Company), Liverpool, patent-medicine vendor.

#### ORDER MADE ON APPLICATION FOR DISCHARGE.

Tanner, John, Quzen Anne Street, W., and Newington Causeway, M.D., M.R.C.P., M.R.C.S., physician, and carrying on business at both addresses, in partnership with J. Barbour and A. M'Kean, under the style or firm of Tanner, Barbour, and M'Kean—discharge granted.

#### SCOTCH SEQUESTRATION.

Anderson, W., Glasgow, veterinary surgeon, August 1, at 12—Faculty Hall, Glasgow.

## FROM MID TO WEST.

THE pharmacist interested in his professional brethren would hardly leave the "faithful city" without having a peep and a snap-shot at the famous establishment where the great discovery of Worcestershire sauce was made.

Lea & Perrins came into possession of the business with which their names became so intimately associated in the

Send the camera on by train, and take an evening walk across the Severn Valley to Malvern. The varying tints and shadows on the Malvern Hills as they gradually change their aspect will well reward the very moderate exercise. Coming nearer, the numerous Malverns—Great, Little, North, West, Link, and Wells—are seen helting the range of hills with their hotels, villas, and water-cure homes. In the centre of Great Malvern, on the terrace at the top of the town, stands the pharmacy so long associated with the name of the Messrs. Burrow. It is one of the best-built chemists' shops in the country, and we doubt whether there is another so finely situated. The dispenser can glance from his work and survey a charming valley in front of him some sixty or seventy miles in range. This pharmacy was established by Messrs. Lea & Perrins, of Worcester, as a branch in 1850, and was carried on under the management of Messrs. Walter and John Severn Burrow for the proprietors until they joined them in partnership in 1852, the firm then being Lea, Perrins & Burrow. Malvern growing in size and importance year by year, the business was rapidly developed, and became one of the most important pharmacies in the Midlands, both in the extent of its business and the high character it attained.

The senior partners retired about the year 1856, and the pharmacy became the sole property of the Messrs. Burrow, who personally directed its operations for upwards of a quarter of a century. They had during those years established and developed an extensive branch business in mineral waters, availing themselves of the exceptional purity of the Malvern springs. Some fifteen years ago Messrs. Burrow retired from the pharmacy in favour of Mr. E. Metcalfe, who disposed of it in turn to the present proprietor, Mr. David Brainard Coldwell, under whose able management the establishment continues to flourish. Mr. Coldwell has followed the lines of his predecessors, whose assistants were all qualified men. It's

early part of this century. A Mr. Guise opened the shop about 1780, and John W. Lea was an apprentice with him. He succeeded his master, and subsequently took William Perrins into partnership. Worcester has had the reputation politically of always being the last stronghold of the falling cause, but its commercial importance has been more than commensurate with its size. In the days before railways it was a sort of metropolis for Wales and the West Midland counties, and the fame of its china has never been eclipsed. Perhaps, however, there are more people who know its sauce than all those put together who could tell anything about its battles, its bishops, its music, or its china.

Mr. Lea was in his shop one day when an old Indian officer came in and asked for some hot sauce; he could not get any hot enough. Mr. Lea thought himself of an old jar in the store-room which had been neglected for years. It was formerly made for "a nobleman in the county," but the nobleman had departed, and Lea & Perrins had a stock of his sauce on hand. The Indian officer tried it and was delighted. He recommended it among his chums, and a demand sprang up. To meet the English palate the fierce heat of the original had to be modified, and Worcestershire sauce was established. This came to pass soon after the year 1830.

Messrs. George & Welch purchased the drug business in 1865. They have conducted it on the same class lines as their predecessors, and they have introduced some specialities of their own. Mr. Welch retired in 1870, and the present partners are Henry George and W. H. Maxey. Mr. Maxey recently owned one of the chief dispensing businesses in Sheffield, and was formerly an assistant with Messrs. Savory & Moor.

pharmacy is registered as a station of the Meteorological Society, and observations are taken daily by verified instruments.

The attractive establishment of Messrs. M. Beetham & Son in the Promenade Villas, Cheltenham, succeeds a much more modest-looking pharmacy, opened in 1845 in the High Street. The business was founded by Mr. M. Beetham, who has retired from active participation in its management for

some four or five years, and his son, the present proprietor, has developed a very important wholesale trade, first in corn-plasters, and later in the famous "Glycerine and Oucumber." Mr. Beetham makes a hobby of photography, and is famous in the district as a camerist.

Bristol is a great place for pharmacy. Cutting is said to have been started there. It is always represented on the

his son, Mr. Richard William Giles, were the proprietors for over fifty years. In 1881, after the retirement of Mr. Giles, Mr. George F. Schacht joined the firm, and amalgamated the business that he had carried on for many years in the same locality. The present owners are Messrs. James Walter White and Alexander Towersey, who became partners some twenty years ago. They have a large dispensing and retail

Pharmaceutical Council, sometimes doubly so, and has now chosen one of its members of Parliament from the drug trade. We go this time for our specimen shop to that which combines two famous names in the style under which it is conducted—namely, Messrs. Giles, Schacht & Co. This pharmacy was founded in 1821 by Mr. R. B. Giles, who with

trade of the best class, as well as a wholesale and export business in bismuth and peps'n specialities that are known throughout the world. Mr. Schacht was the inventor of the fluid preparation of bismuth named "liq. bismuthi." The smaller building adjoining the retail premises contains warehouse and stock-rooms, with laboratories fully equipped

with steam apparatus for the manufacture of all galenicals, and for analyses and private research. The names of many well-known pharmacists at home and abroad are contained in the roll of apprentices that have received their training amid these surroundings.

Mr. Roper's new shop at the corner of Tavistock Road and Portland Place, Plymouth, is now, perhaps, the best pharmacy in the Three Towns. It is close by the premises which Mr. Roper has occupied for many years, and occupies the ground floor of an imposing building which Mr. Roper has had erected from the design of Mr. Harvey, at a cost of 3,000*l*. The spacious and well-fitted windows give a very effective outside appearance, while inside the recess-labelled bottles, with which the shelves are furnished, are in good keeping with the general style. Laboratory and dental rooms are reached by side doors from the street, and beyond the latter is a dentist's workshop. This business is conducted by Mr. R. F. Roper, assisted by his brothers, Messrs. F. A. and H. A. Roper. All of them are pharmaceutical chemists.

## Notes of Novelties.

### SOME HERBAL NOVELTIES.

It is considered to be a gratifying thing, from the temperance point of view, that there is an increased demand for beverages of the herb-beer type, which can be brewed at home and which are characterised by their low alcoholic content. Messrs. Potter & Clarke, of Raven Row, E.C., have in this connection now added to their packets of dry herbs and liquid extract for herb beer a dry extract (Payne's original) which, we should think, will be a popular article. This is presented in a solid cake, which contains in itself all the bitter and flavouring ingredients required for a brew. It is perfectly soluble in hot water, and, owing to its portability and neatness, it is likely to be a favourite. The firm continue to give their careful attention to the packing of herbs in popular form. They are now putting up a sixpenny daudelon coffee (Dr. Thompson's). Another novelty which they send us is the "Clove Pink" tooth-paste, a refreshing and highly-detergent dentifrice. It is put up neatly in collapsible tubes to retail at 3*d.*, 6*d.*, and 1*s.*, and is such a bargain that it well deserves the synonym, "The People's Dentifrice."

### STEPHENS'S KNIFE-POWDER.

THIS we have had subjected to trial, and the report made to us is that the powder gives knives a remarkably bright polish with very little rubbing, and with no mess. It is a white powder, put up in tins with perforated top, and is an article which chemists can handle with credit to themselves. Messrs. Stephens & Co., of Kidwelly, South Wales, are the manufacturers.

### "LACTOMALTINE."

MESSRS. ANDERSON & Co., of Edinburgh, are putting up a combination of malt extract and the solid constituents of milk under the above name. It is intended for those to whom cod-liver oil is unbearable, and the delicacy of this preparation is decidedly in its favour, while its value as a nutritive is well spoken of.

### BLONDEAU'S "VINOLIA" DENTIFRICE PATENT STOPPER.

MESSRS. BLONDEAU ET C<sup>ie</sup>. have patented a glass stopper to use with their registered "Vinolia" dentifrice bottle. This

patent glass stopper is funnelled out from below upwards so that the apex of the funnel is an aperture about a quarter of an inch in diameter in the top of the stopper. In this little opening in the glass stopper fits a small vegetable-ivory

stopper. When this ivory stopper is removed, any desired quantity of the powder can be easily poured out on the tooth-brush; and if the glass stopper be removed, even the tooth-brush itself can be introduced into the bottle. The design of the patent is to do away with the necessity of inserting a damp brush into the bottle, and to preserve the perfumes and desirable qualities of the dentifrice till the very last is used.

### NEW CHEST-PROTECTORS.

MR. VINCENT WOOD has been showing us a new style of chest-protector which he is putting before the trade for the winter season. The material from which the protectors are made is a superior kind of amadou, of a pale buff colour, and with a beautiful velvety surface. It makes, as may be imagined, a handsome article when trimmed with silk binding, and the character of the material (it is 4 millimeters thick, perfectly porous, and highly absorbent) makes it an acceptable addition to this class of surgical goods. Mr. Wood makes the protectors plain or lined with his pine-wool felt, and throat-pieces, knee-caps, and the like are also made from the same material. In the matter of electric belts, Mr. Wood has just made an improvement upon those worn by gentlemen. This consists of a scrotum pouch, which may be worn during horse exercise or at any other time, and removed when desired. The belts are both broad and narrow, and the electric elements of zinc and copper are connected by insulated wire throughout. In cases where the galvanic

current is too weak, it may now be supplemented by the power from a portable battery supplied by Mr. Wood, for which the belt is provided with suitable attachments. This brings the belts well within scientific lines.

#### FORD'S PATENT ABDOMINAL SUPPORT AND TRUSS.

MR. H. C. QUELCH, of Ludgate Square, is wholesale agent for a new abdominal support which has been patented by Messrs. Ford & Parr, who are the makers. The patented feature of this new belt is that while the steel spring-bands are made to pass round the body outside the corset, the abdominal support passes under the corset as shown in the engraving, being so made that pins attached to it pass through the corset and are screwed tightly to the spring-

bands. A very light and comfortable apparatus is thus supplied, the special advantage of which is that it cannot "ride up" or get displaced from its proper position. In the construction of Ford's patent truss, a similar light steel spring-band, which, being open, makes the truss light and cool in wear, and a very conveniently-constructed method of adjustment for the pad, are adopted.

#### "SAMBULINE."

MESSRS. OSBORNE, BAUER & CHEESEMAN have introduced for summer use a new jelly similar to their well-known glycerine-and-honey jelly, but put up in an entirely different form, and differing in character. The old jelly is one which was intended for winter use, but it has gradually been adopted also for anointing the skin during the summer months. The makers think they can provide the public with a more suitable article for that purpose, hence the new "Sambuline." This is a pale-green translucent jelly, having the pleasant odour of elder-flowers. It is put up in collapsible tubes, and when applied to the skin it soothes the smarting of sunburn and leaves the skin in a nice soft condition. Recently there has been an unusually brisk demand for the winter jelly. Those who look into the matter will find that the reason of this is that "Sambuline" has been advertised, and in such a way that the old name is the one which people have carried in their minds. Chemists should, therefore, take note that there are two articles, and while the season remains they may do good business in "Sambuline." It is scented, we understand, with ol. sambuci flor.—a somewhat rare essential oil.

#### PATENT VAPOURISING-TUBE.

THIS is an article which W. B. Fordham & Sons (Limited) are placing on the market. It is a lid-attachment and bronchitis-tube, which may be fixed to any kitchen kettle

The arrangement is so simple, and the convenience so great, that the wonder is we have had nothing of exactly the same kind before. The tube retails at 1s. 3d.

#### THIOCAMF.

THIS powerful disinfectant, which Messrs. T. Tyrer & Co. are making under Prof. Emerson Reynolds' patent, is an amber-coloured, syrupy liquid, and on opening the bottle the strong sulphurous odour which is immediately given off convinces one of the active bactericidal character of the disinfectant. A 2½ bottle gives off 20,000 cubic centimetres of disinfecting vapour.

#### BANKRUPTCY REPORTS.

*Re* THE SAYDI'S CHALLENGE REMEDIES COMPANY, Byrom Street, Liverpool.

KATE SINCLAIR, and her sister, Edith Mary Sinclair, who traded in Byrom Street, Liverpool, as The Saydi's Challenge Remedies Company, were called on their adjourned public examination, but did not appear, nor were they represented. The Official Receiver having stated that the motion seeking to establish that Mr. Edwin Morris was really the trader in question had been dismissed, the examination was adjourned *sine die*.

*Re* C. J. COLES, 7 Mincing Lane, E.C., Colonial Broker, trading as C. & C. J. Coles.

THE creditors under this failure met on Friday, July 22, at the London Bankruptcy Court, before Mr. George Wreford, Senior Official Receiver. The Chairman reported that the liabilities amounted to about 25,000%, and the assets were very small. He was informed that the debtor was too ill to attend to business, for which reason the usual statement of affairs had not been filed under the proceedings. The failure appeared to have been partly caused by disastrous speculations in produce. In the absence of an offer resolutions were passed to wind up the estate in bankruptcy, with Mr. E. C. Moore, accountant, Crosby Square, acting as trustee, assisted by a committee of inspection selected from the principal creditors.

*Re* GEORGE GOODLIFFE, [17 Rendezvous Street, and 97 Dover Road, Folkestone, Pharmaceutical Chemist and Optician.

THE adjourned examination of this bankrupt was held at the Canterbury Bankruptcy Court on Friday, before the Registrar, Mr. George Furley. Mr. Hall, who appeared for the trustee, having asked the bankrupt a few questions, the public examination was closed, debtor being requested to furnish the trustee with an account of all the moneys he had borrowed from his mother.

## A JUBILEE EXHIBITION.

CONTINENTAL authorities will have it that a twenty-fifth anniversary is a jubilee. In that respect the annual museum of the British Medical Association, which was opened at Nottingham on Tuesday morning, is the jubilee one, for it is the twenty-fifth of the series. "Museum" is a refined expression for the affair—at least, this year. All the characteristics of the exhibition are there, and more prominent this year than ever before that crowning characteristic—backwardness. Not that the exhibitors were laggard, but solely on account of the fact that the series of rooms in which the goods were displayed were still in the hands of carpenters, glaziers, and others of that ilk on Monday morning.

While we write, the meetings of the Association are in full swing at the University College, and it is but fair to say that these could not be better housed. The members may attend the whole of the sections in one day without fatigue; but the probability of their finding their way to Sections A, B, and D of the museum is another matter. The reason is that there has been a new extension of the engineering department of the College, and the sections named have been placed there. It is not a get-at-able place at all. On entering the College one turns to the right, then by poster he is directed to the left along a winding passage; that begins the journey. Now two short flights of steps have to be mounted, and if one is quick at seeing round a corner he will detect a "Books and Instruments" room to the right. There are more instruments in a room above, but two flights of stairs have again to be mounted, and still two more before the visitor reaches the general drug exhibits, which are scattered over one large room and three small ones. It is all very bewildering, and that room in the odd corner near the roof quite needs this placard,

DON'T MISS

THE

DRAWING ROOM,

to assuage the fierce ire of the exhibitors placed therein. Some of the exhibitors wanted THE CHEMIST AND DRUGGIST reporter to come down heavy on someone for all the bother. But whom shall we scarify? The secretaries were all contesey. They were working like Trojans, and the fact is that all exhibitors who were on the spot had their goods displayed very handsomely by Tuesday morning. Let us hope that the preliminary inconvenience will be compensated by good business, that the initial grumbling will have changed to unqualified satisfaction, and that the disorder will not occur again.

The character of the exhibition as a whole is quite up to previous years. We miss some old exhibitors, and a few are here who have not ventured before. From the reportorial point of view the arrangement is not advantageous for classification, and perforce we follow the order given in the museum-catalogue. First, then, there is the large room on the

## SECOND FLOOR OF THE TECHNICAL SCHOOLS.

Here JOHN RICHARDSON & Co. (LIMITED), of Leicester, have the whole of one end of the room on entering devoted to their pharmaceutical products. It is an elegant and imposing exhibit, consisting of three pyramids, made up of coated pills and compressed drugs in the centre, flanked with smaller pyramids of special pharmaceuticals, one at each side of the centre one. A good feature in the case of most of the liquors, syrups, and other liquid preparations is that they are shown in the style in which they are sent out, mostly 1-lb. bottles, and it is noticeable that the bottles used differ in form, thus giving distinctiveness and, at the same time, ensuring a certain degree of safety in dispensing. For example, a dispenser, would not confuse between "peptocolos" and liq. ergotæ ammon. This introduction of distinctiveness is decidedly advantageous in practice although it may be a violation of the old-fashioned notion that one style of bottle should be adhered to by a firm. In the exhibit we noticed that considerable prominence is given to suppositories and other forms of medication of a similar nature, while the firm are now giving close attention to the manufacture of gelatine capsules, and turn out beautiful

products in which the gelatine covering is so thin that the size of each capsule is perceptibly reduced. In a room on the first floor J. Richardson & Co. also exhibit; their collection here comprising a fine dispensing-cabinet for doctors, surgical instruments, and various publications.

THE LIQUOR CARNIS COMPANY (LIMITED) have not Liberty to aid them in their display this year, but they show their goods in excellent style, and distribute samples with a free hand, giving prominence to Malto-Carnis and Jelly-Carnis. The former diet-adjunct we have had occasion to speak of in favourable terms before now. The jelly appears to be made on the principle recently described by us, the object being to combine the pure uncooked juice of beef with a gelatinising body without coagulating the albuminoid constituents of the juice. In this the company have succeeded, and the product is a pleasant-tasted jelly, which is, doubtless, highly nutritious, and of special value for feeding patients whose strength is greatly reduced. The company are developing the preparations branch of their business, so that with the Liquor Carnis their exhibit has quite an attractive appearance.

THE SANITAS COMPANY (LIMITED) are making a feature just now of washable and non-washable distempers with which 10 per cent. of "Sanitas" is incorporated. These are shown in their Nottingham exhibit along with samples of the many specialities which the company now produce from "Sanitas," their appliances—automatic disinfectors, inhalers, and disinfecting fumigators—being placed in the forefront. A few trifling but structurally important alterations have been made in the automatic disinfectors since we noticed it, the effect of which is to make it a neater and more serviceable article.

THE MALTINE MANUFACTURING COMPANY and CARRICK & Co. (LIMITED) conjointly exhibit combinations of Maltine, liquid and solid peptonoids, and Carrick's soluble food. The latter, as an infants' food, has a peculiarity which is worth mentioning—viz., that the cream of the milk used in making it is removed and replaced by cocoa-butter. This bold step was undertaken on the suggestion of Professor Atfield, the object being to present a milk-food free from the tendency to become rancid. This exhibit is very handsomely displayed, and so is that of the BOVINE COMPANY, which consists solely of Bovine. Beside this, though occupying a small space, is a stand of Downes' sol. iodi. This solution is a colourless iodine devised by Mr. R. J. DOWNES, a well-known Irish pharmaceutical chemist, but, though colourless, it is very active, and has been known to produce iodism, a symptom which we have never heard of in connection with the alkaline colourless iodines. Mr. Downes' solution is really a liniment—that is, it is rubbed into the skin, which it does not vesiccate. THE SANITARY WOOD WOOL COMPANY have a good assortment of Hartmann's wood-wool specialties on show, all of which have previously been referred to in this journal except the complete sanitary outfit for accommodation. This is a very convenient box of articles, which, we should think, druggists will be able to sell as a whole. The company are also showing a new sterilised wood-wool dressing. This is a roll of wool, which, after sterilising, is tied up in parchment-paper like a sausage, the ends of the packet being packed with boracic-wool. It is placed in the steriliser again, and the ends of the package are then tied tightly, so that the air may circulate through it, but as bacteria are said not to go through a wool-filter, the dressing remains aseptic.

BURROUGHS, WELLCOME & Co.'s is the next exhibit in the room, and it fills up the whole of the end wall, another part (consisting mainly of surgical dressings and appliances and medicine-chests) being on the floor below. One Burroughs' exhibit is very like another until it is looked at closely, for tahloids, Kepler malt preparations, elixoids, Fairchild's digestive ferments, valoids, and the like always stand to the front. For the first time this year, however, medical men have the opportunity of testing and tasting essence of malt which goes tastefully with cream and soda water, and some even add a dash of whisky to it without the cream. These combinations will probably have a full degree of popularity in suitable places, but we are inclined to predict that the Kepler essence will have its reputation *par excellence* in the nursery as a natural supplement to the diet of children. In regard to tahloids, it is more than ever noticeable that Burroughs, Wellcome & Co. are

pushing the sugar-coating to a fine art, and they now place on the market a large number of special combinations in this lenticular form, which is so well adapted for swallowing. We notice that the anti-constipation tabloid is now put with a white sugar-coating. This combination is as follows:—

|                     | Grain.          |
|---------------------|-----------------|
| Aloin .. .. .       | $\frac{1}{2}$   |
| Ext. bellad. .. ..  | $\frac{1}{4}$   |
| Strychnin. .. ..    | $\frac{1}{100}$ |
| Pulv. ipecac. .. .. | $\frac{1}{10}$  |

One may be taken thrice daily, but as a matter of fact one before dinner is an effectual preventive of bilious sickness. A distinct novelty is exhibited in the shape of a tiny tabloid which represents 10 minims of dialysed iron apparently in an undecomposed state, for the tabloid forms a clear solution with water. An allied tabloid is the Bland's pill, a cream-coloured 4-grain tabloid, which contains, we are told, the ferrous carbonate ready formed. With water these tabloids become green. The firm now stock a variety of ichthyol specialities, the newest being an ointment, and  $2\frac{1}{2}$ -grain tabloids which are sugar-coated. Lanoline, we hear, is growing steadily in esteem. While inspecting the surgery exhibit our representative was shown by Mr. Burroughs a massage rubber which is intended to enable

those who require the benefit of massage at home to have it without employing a professional rubber or shampooer. The massage rubber consists of a serrated and waved surface of specially prepared indiarubber, attached to a brass plate, fixed in a polished hard-wood body, with ebony handle, arranged in such a position as to render the use of the massage rubber easy and pleasant, and at the same time affording a capital form of exercise. Messrs. Burroughs, Wellcome & Co. may take up the agency for the rubber; at any rate, they will answer inquiries in the meantime. They also exhibit Milne & Co.'s antiseptic dressings, the manufacture of which has quite recently changed hands, and medicine chests and cases of all kinds are prominent on their stands.

THE UNIVERSAL TEA COMPANY, LIEBIG'S WINE COMPANY, and RIDDLE & Co. have exhibits close beside the last described, but the goods are substantially of the character which have previously been described. Riddle & Co. now have, we may add, a concentrated lemon-squash, which, like their lime-juice, is Stower's brand.

JOHN WYETH & BROTHER, who are represented in this country by Mr. W. F. Horton, 30 Snow Hill, are exhibiting Wyeth's beef-juice, which we recently reported upon, and a number of interesting pharmaceutical preparations, the chief of which is a series of ophthalmic discs, both B.P.—that is, made of gelatine—and compressed. In the latter case the basis is a soluble and neutral inert powder, with which the active ingredient is mixed in solution, so that perfect division of the active ingredient is insured before the mixture is apportioned and compressed. They are very pretty preparations. We understand that the firm are to introduce the whole series of their compressed pills into the English market now. They also exhibit a few elegant digestive preparations, such as granular soluble pepsin, amylopsin, and an elixir of digestive ferments, the peculiarity of which is that it contains amylopsin, one of the constituents of pancreatic juice.

Our representative had a short conversation with Mr. John Salamon, of SALAMON & Co., who have lately introduced what they call "purest chloroform," a brand which has

created some attention in this country. It is made, we were told, from chloral hydrate, and the process of purification is a special one. The specific gravity of the non-alcoholised article is 1.502, of the alcoholised 1.496, at 15.5° C. We have not ourselves examined it. The trade, up to the present, has been with Germany and the Continent mainly.

TUCKER & Co. exhibit eucalyptus oils and a large number of preparations of the antiseptic class made therefrom. The same firm exhibit U.S.P. and other American elixirs, and a series of preparations which they call "oleosacchari," which are combinations of essential oils with sugar, for making B.P. *aque*, and generally for flavouring. They resemble, in short, the *elæosacchara* which are so popular on the Continent.

CHRISTY & Co., of Lime Street, E.C., have a very neat exhibit this year. The longer the firm exhibit the more inclined they seem to be to pin their faith to raw drugs. This week preparations and specialities are the chief attractions, if we may except a fine dried specimen of pichi in flower, and a specimen of *Cactus grandiflorus* fruit preserved in spirit. Our reporter was informed that the demand for antrophors, or spring bougies, is on the increase. These, we may state, consist of a close spiral of brass wire, upon which is placed a layer of insoluble elastic composition. The common size is that of a No. 4 or 5 catheter. Upon the basis thus made a layer of a suitably medicated mixture is deposited (by simply dipping or otherwise). There is thus provided a bougie for use in the treatment of urethral diseases, and a guard for keeping the walls of the urethra apart, which is no mean consideration in some cases. This year we observe for the first time that these antrophors are made for treatment of disease of the prostate. In these the lower half of the spiral only is coated with the medicament. Another attractive feature of the exhibit is Morstadt's cachet apparatus (in several styles) and empty cachets. Messrs. Christy & Co. have also added to their many ventures the gelatine-capsule trade. Those which they show are of foreign make, but they are nice, and we have now the option of getting from the one quarter the "Palma-Christi," sweet as honey, and in flavour delicate as Cadbury's Mexican chocolate, and tempting capsules containing the old fashioned castor-oil. Beside this exhibit is an excellent one by G. MELLIN. Baby's food is the chief part of this, but equally prominent is Mellin's cod-liver-oil emulsion. The formula of this is given as follows, and Mr. R. H. Davies, of the Apothecaries' Hall, says the composition of the emulsion is "in strict accordance" with it:—

|                                |           |
|--------------------------------|-----------|
| Ol. morrhue .. .. .            | 6 fl. oz. |
| Gum. arabic. .. .. .           | q.s.      |
| Sacch. alb. .. .. .            | q.s.      |
| Aq. cinnamomi ad .. ..         | 12 oz.    |
| Misce ut fiat emuls. et adde : |           |
| Calcii hypophosph. .. ..       | 48 gr.    |
| Sodii hypophosph. .. ..        | 43 „      |

Adult dose: One to two tablespoonfuls. Children: One to two teaspoonfuls. Taken, as a rule, after meals, and at bed-time if necessary, always commencing with a small dose, and gradually increasing.

The question, of course, is, How much gum and sugar, and how made? We were pleased to hear from the representative of SACKLINS & Co. that the trade have responded well to their announcements in this journal regarding their mustard and linseed poultices. A packet of the latter, which had been put up eight months, was opened in our reporter's presence, and he found the meal to be perfectly free from rancidity. This is due to the fact that the meal is packed in the rectangular bags when freshly ground. Two per cent. of boric acid is added to it, and each poultice is enclosed in a sheet of parchment-paper. A curious point about the linseed poultices is that, although they are used over and over again for twenty or thirty times, which they can be, very little of the boric acid is dissolved out. This is taken as a proof that the poultices are always aseptic.

JOHNSON & JOHNSON (LIMITED) give prominence this year to the arrangements which have to be made in a private house for a surgical operation on the antiseptic principle. The arrangement has been drawn up for them by Dr. John B. Denver, of Philadelphia, and it is a nice one for displaying the different kinds of dressings and utensils required; in fact, it is to show Johnson & Johnson's make of surgical

dressings. We noticed the use for covering tables and for mops and towels of the company's new product, "Lintine," which is cotton compressed into sheets like soft blotting-paper. This is suitably medicated, and each medication has its peculiar colour. The exhibit also includes a full series of plasters, Upjohn's friable coated pills, and gelatolates, a class of ointment-compounds such as Unna recommends.

CORBYN, STACEY & Co. are showing two splendid green specimens of the peculiar stem of *Cactus grandiflorus* which has five angles, upon the edge of each of which the flowers are borne. These were a good set-off to the preparations of the drug, which has been used rather extensively since Dr. Ankle recommended it for heart and other organic troubles some time ago. Corbyn, Stacey & Co. also show non-alcoholic tinctures such as have been used in the London Temperance Hospital for many years, but which they are now carrying further than has been done at the Hampstead place. The firm appear to appreciate the difficulty of getting a correct designation for the preparations, as they use the word "tincture" with reserve. Their exhibit generally is of a purely pharmaceutical character, and many of the specimens shown are distinctive—e.g., there is a group of medicated collodions; a new syrup of ferrous and potassium bromides; a new aromatic and sweetened castor oil; and nearly all that is new in materia medica is represented either in the original state or in some elegant galenic form.

After passing an attractive exhibit by HENRI NESTLÉ of the world-famed milk-food, the visitor reaches a display by T. HOWARD LLOYD & Co., who, as a firm, have not before been seen at this annual museum. It is not a large, but is a tastefully displayed, exhibit, comprising compressed tablets, coated pills, and granular effervescent preparations. Of the pills we need only add to what has been said before that pink and blue coatings as well as white are exemplified, these and other colours now being wanted sometimes for pills of special composition which retailers devise. The granular preparations are a new department of the firm's, and from our inspection of the samples we can say that they have begun well. The exhibit included a fair representation of liquid preparations, such as fluid extracts and syrups, a "Bromochloral" being amongst the latter. Our reporter gathered from Mr. Lloyd, jun., in the course of a conversation, that "Lanadeps" is made by the firm—that is, they get the rough suint and purify it by chemical means, adding 30 per cent. of water to make it correspond with adeps lane, B.P.

#### THE ENGINEERING-ROOM

now commands the attention of the visitor, and as we enter it we pass the SEDOX MANUFACTURING COMPANY'S display at the end of the corridor. "Sedox" is the naturally absorbent silky fibre which was introduced last year for surgical purposes. Since then the introducers have worked at the matter diligently, and now show various medicated forms of it, as well as sponges, diapers, chest-protectors, &c., made from the fibre. Inside the room, OPPENHEIMER, SON & Co. (LIMITED), have the central position, and here palatinoids are the principal feature next to the smart young men who speak to visitors about their virtues (*i.e.*, of the palatinoids). For example, a palatinoid of bismuth subnitrate and euonymin is the subject of comment, and a contrast with a pill of the same ingredients is the comparison. The pill dissolves slowly, and not wholly in the stomach. If it is that organ which needs the bismuth, it does not get it; whereas the palatinoid bursts open when it meets the gastric juice, and the bismuth is spread out to perform its mechanical function and specific action upon the weakened walls of the stomach. This is a distinct advantage. Bi-palatinoids also grow in kind and favour, ferrous hypophosphite being the latest thing produced—or, rather, the bi-palatinoids contain the ingredients for the production of the salt, which is thus absolutely nnoxidised. Apart from these articles the company exhibit a large number of elegant liquors, of which the most recent are liquor helaline et culverine co. and liquor glabrincine co., the latter a preparation of *Rhus glabra*, which is prescribed in urinary disorders. Crude drugs, cream of malt, and medicine-cases make up the rest of the attractive exhibit.

The arrangement of the exhibits is not altogether disadvantageous to the exhibitors, since visitors have a sense

of contrast conveyed in firms of diverse interests being grouped together. Thus, the next one tapped, if we may use the term, is that of BRAND & Co., the Mayfair specialists for invalids' foods. And it is a toothsome collection indeed, for here are the essences and jellies with which all chemists are familiar, and a new chicken jelly to tempt the palate of the invalid. A mutton jelly is another recent introduction, both these jellies having distinctive flavours, which will give that variety to invalid nutrition which is so much needed. For the healthy there are soups and jellies of all kinds, and a special feature of this year's exhibit is the prominence given to condiments, such as chutney and Mayfair relish, as well as several of the firm's old favourites. Beside this exhibit is one by C. J. HEWLETT & SON, which contains many new remedies and compound medicinal preparations of the mist. pepsin. co. c. bismuth type. A useful selection of primary tests for chemical use, which have been devised by the firm, is also exhibited. These comprise an alkaline bismuth test for sugar, which is perfectly stable and colourless, and when boiled in the proportion of 1 part of urine and 9 parts of reagent, darkens to deep black, according to the proportion of sugar present; the trichloroacetic acid test for albumen, which is delicate, and requires no heat; and the sulphilic-acid test for typhoid fever, on mixing which with a typhoid patient's urine, previously rendered alkaline with ammonia, a red colour is produced. It is stated to constitute one of the earliest and most constant signs of the disease.

SEABURY & JOHNSON exhibit in an attractive way a large assortment of the products of the Seabury Pharmacal Laboratories, comprising a selection of medicated plasters in rubber combination, and plain and medicated cottons packed in various forms and of several medications. They also have a display of antiseptic gauzes put up in a new form of package, hermetically sealed, and therefore secure from atmospheric pollution. An advantage of this style of packing is that the gauzes are folded in such a way that the folds can be withdrawn from the package and cut off by the operator at pleasure. For those who do not require such gauzes medicated, the firm are now packing sterilised gauze, in screw-capped hermetically-sealed glass jars, sterilised by heat after packing and sealing. Each jar contains five yards of gauze, which unwinds from the centre, so that any required length can be cut off without removing the entire piece. We also observed the sanitary cuspidors introduced by the firm; a display of "hydronaphthol," and its preparations, and Seabury's compound sulphur candles, which we hear are still growing in popularity as a means of aerial disinfection. Dermatological plasters were another of the many items of which we took note, and an enterprising curator informed us that in respect to the delicate skins of ladies the Pharmacal Laboratories now turn out a mustard plaster of half the usual strength. Robin's linseed poultices, which we were the first to note the advantages of, are a sure thing now, but although the Seabury products of the plaster kind are fully in evidence it is apparent that the firm are cultivating with equal vigour and success the trade in antiseptic dressings.

THE APOLLINARIS COMPANY (LIMITED) exhibit in this room their celebrated table-water, as well as Hungarian bitter water and Friedrichshall. It is rather remarkable that of recent years under improved methods of collection the last-named has increased 25 per cent. in strength, but that is not so remarkable as the increase in the sales of Apollinaris. A million bottles a year of an increase means a great deal more than improved revenue to the company.

THE WOODHALL SPA (LIMITED) have a place here, not so much for the purpose of improving the sale of the Spa products as to call the attention of the medical men to the climatic advantages which Woodhall presents to invalids; and beside the company's exhibit of the natural bromo-iodine water and the salt derived from it is an imposing exhibit by the JOHANNIS COMPANY (LIMITED), which comprises simply the table-water collected from the springs at Zollhans, and aerated with the natural carbonic-acid gas collected thereat. In a small room adjoining are several exhibits which require a note before we pass on to the drawing-room. Here the CHEMISTS' AERATED AND MINERAL WATERS ASSOCIATION (LIMITED) make an attractive show of aerated waters in syphons, and of fruit syrups. The Association has just put into stock 10,000 syphons the tops of which are lined with vulcanite, so that the water does not come into

contact with metal. Two 2 gallon syphons are an attraction here, and from these a refreshing beverage is to be dispensed in the course of the week. In the same room **GEORGE MASON & CO. (LIMITED)** are showing samples of all their invalids' specialities, such as essence of beef and concentrated beef-tea, and our reporter was told that since last year the malted food for infants which the company were then beginning to push has come into favour. Here a prominent exhibit is that of Hall's coca wine, made by **STEPHEN SMITH & Co.**, the distillers and wine merchants. "An extract of coca-leaves in good wine" is the simple manner in which they announce it, and although this is the first time that the firm have exhibited in the museum, they do their product justice. The wine differs in some respects from other coca wines—e.g., the coca flavour is sufficiently prominent that the wine cannot be mistaken for a beverage, yet it is pleasant to drink—a fact which is due to the quality of the red wine used in making it. Messrs. Smith's representative reports that Hall's coca wine has "caught on," and that his firm have been asked by the trade to go further into the manufacture of medicinal wines. The "food for gods" was appropriately lodged beside the coca exhibit in an attractive assortment of the products manufactured by **CADBURY BROTHERS**. It is difficult to conceive that cocoa is the only rival in this country to tea, and that its uses are far more varied than tea can ever be put to. Messrs. Cadbury's display gives one an idea of the manner in which the cocoa industry has been developed, for not only is their cocoa essence in evidence, but they show several of the fancy forms in which chocolate is sold. Their guinea case is a thing to make one's mouth water. It is a beautiful plush-covered cabinet with chromo panels, the seven drawers inside being filled with the daintiest comfits. The manufacture of some of these comfits and of finer qualities of chocolate is a slow process, as the chocolate powder must be kept for at least a year, in order to permit the vanilla to blend evenly and thoroughly with it. Messrs. Cadbury get into touch with medical men, as far as is possible at these meetings, by presenting them with an elegantly-bound edition of "Cocoa: All About It"; and their sample cases, containing a bulky box of cocoa essence and three packets of Mexican chocolate, help to perpetuate the "absolute purity" of the Bournville product.

#### THE DRAWING-ROOM.

Why this title we cannot tell. "Don't miss it," we may honestly say with the museum secretaries, for there are

some good things in it. **INGRAM & ROYLE** are there with Carlsbad water and salts, Vichy, Contrexeville, and many

other natural waters which they have helped to popularise in this country, while they give special prominence to Flitwick Chalybeate Water, that highly ferruginous English water (fully a grain per oz.) which does not blacken the teeth. Next in catalogue order are **HERTZ & COLLINGWOOD**—Franz Josef, Levico, and Rosbach waters their leading lines. Their exhibit of showcards is so good that it is excusable to give a black-and-white reproduction of one of them. Here a Walachian girl is represented at a well. P. Thumann is the artist, and his picture has been reproduced most faithfully. The chromo contains some twenty colours. **BERNHARD KÜHN** is showing beside this the digestive properties of papain (Finkler), and he exhibits attractively the pure powder and its combinations as well as papain peptones and a few excellent photographs of the papaw-tree, one showing the fruit in splendid clusters. Mr. Kühn also exhibits exalgine and an extract of jambul. **JEYES' SANITARY COMPOUNDS CO. (LIMITED)** exhibit their antiseptic (creolin) and disinfecting preparations. They have just introduced a new article, "Emplastrum Creolini," made by A. de St. Dalmás & Co. This contains 5 per cent. of creolin, and is spread on calico. Obviously there is a distinct advantage in having an adhesive plaster combined with the antiseptic properties of creolin.

We do not recall having seen **BATTLE & WATTS** exhibit in the museum before. Their exhibit consists of a collection of their original liquors, such as belladonna, cinchona, opium, and senna, all of which are displayed nicely. **MCKESSON & ROBBINS** give prominence in their exhibit this year to the compound stearates and the pulverflator, which we described a few weeks ago. In connection with these Mr. Evans, their representative, was showing how water behaves towards the stearates. Putting a little of one of the

stearates on the palm of his hand, he pours about half a teaspoonful of water upon the powder, and then the water runs back and forward over the stearate as a globule of mercury would, without wetting the hand. This naturally creates considerable attraction. He also exhibits the application of liquid alboleine as a hydrocarbon throat-spray. **ROWNTREE & Co.'s** "Elect" cocoa and "Queen" chocolate are shown upon the table-extension along with the malt and other pastilles which they recently introduced.

Through Messrs. F. Newbery & Sons, their European agents, **W. R. WARNER & Co.**, of Philadelphia, make an exhibit of sugar-coated pills and compressed goods, which is as attractive to druggists as it is to doctors, for here are placed a full series of those elegant show-vases which the firm have popularised. In these are many kinds of "little pills," and it will be seen from a supplement in this issue that some good anti-stamp labels may be used with these. Our reporter was shown two new combinations. First pil. cascara cathartic, according to Dr. Hinkle's formula. These pills contain aloin, podophyllin, belladonna, strychnine, and gingerine in nicely apportioned doses, and they are coated pink. The combination appears to be a good one for general use as a tonic-aperient. Then there are also Dr. Carl Seiler's antiseptic pastilles for nasal and mouth sprays and donches.

**THE LIVERPOOL PATENT LINT COMPANY** have their exhibit in this room. It contains samples of their cottons, lints, &c., and a new material which they call "Lustral." It is a fine white fibre of silky appearance, is naturally absorbent, and for surgical use is impregnated with 1 per mille of corrosive sublimate. **BOVRIL (LIMITED)** have a display of their ox-beef preparations in this room also, amongst those new to us being Bospur soup powder, of which it is said that in it "animal and vegetable nourishment are so blended and concentrated that it contains 400 per cent. more actual nourishment than any desiccated or dried soup

preparation in the world." It sells at 1d. per packet, sufficient for two plates of soup.

ALLEN & HANBURY'S have a certain advantage in their exhibit being placed in the drawing-room. It stands alone, as it were, and in arrangement is characterised by excellent taste. Thus, on one side we have examples of their chief medicinal specialities, including their hypoderms and other compressed tabellæ; then the various Bynin preparations, pastilles, coated pills, and other gelatine goods; and on the other side a series of infants' foods which have a distinctiveness all their own. There are three kinds in the series. No. 1 is the "first food for infants," which is adapted to infants from birth to three months. It is prepared from selected cow's milk by removing the excess of casein, and adding sufficient cream, albumen, and milk-sugar to bring up the quantities of these constituents to the required standard. The mixture is then sterilised, concentrated *in vacuo*, and preserved in hermetically closed vessels. Next is "Mother's milk food," adapted to infants under seven months, which contains all the before-mentioned nutriments, some maltose and soluble phosphates. And lastly "Malted food," adapted to infants of six months and upwards. This is a kind of improved Liebig's food, and, like the others, is sterilised. These foods, especially the first two, meet a real want in the portable infants' food department. The firm are also exhibiting Andreoli's electric ozoniser, an apparatus like a hexagon, made of metal combs meeting in the centre to form cones. Through these an electric current is passed, and while this occurs ozone is produced in sufficient quantity to permit its being inhaled for medicinal purposes.

#### SURGICAL EXHIBITS.

Most of the surgical exhibits are displayed in rooms on the first and second floors. Prominent amongst them is one by LYNCH & Co., in which aluminium instruments are well represented. Aluminium cannot be used for all instruments, but for specula and pessaries it has advantages over all other metals, and this fact is appreciated by Messrs. Lynch & Co. Tracheotomy tubes made from it are wonderfully light—we should think not more than 15 grains—an advantage in this case which is likely to give the metal preference over all others. As our reporter looked over the exhibit, which is quite bewildering in its variety of instruments, he had pointed out to him a 4½d. green ball-syringe, a pile of flat sponge now used as an absorbent in abdominal sections, artificial eyes, a boxwood ointment-box for applying unguents to the rectal cavity, and many forms of celluloid douches. A few sundries, such as spray-producers, cut glass hottles, shaving-brushes, and the like, always form a part of Messrs. Lynch's exhibit, and they lead to business it would appear. The exhibit of these this year is particularly good.

W. H. BAILEY & SON, of Oxford Street, give special prominence to trusses in their exhibit, amongst them being some samples of superior finish which were highly commended at the recent Cutlers' Hall Exhibition. Gum-elastic and indiarubber trusses are well represented, and there is a new form of truss (rubber-covered) which they have just perfected. This is a steelless truss with a Manx-leg spring on the front of the pad. The spring is made of a metal which can be bent back so as to increase the pressure, and as any of the "legs" can be so bent the pressure can be adjusted downwards or in any other direction which the rupture requires. The firm also exhibited for the first time Buckland's china bed-bath and slipper, which we illustrate.

The great advantage of this bath is that it can also be used as a slipper, and there are no crevices for uncleanly accumulations as in the tin baths. It is made of Minton china. There were also several beautifully-finished abdominal belts, made according to Mr. Bailey's patent. A defect of

abdominal belts hitherto has been the difficulty of keeping them in place and preventing them from "rucking up." The Bailey belt is so arranged that it

adapts itself to the figure; there are spaces at the sides, through which the hips project, leaving them perfectly free, and removing all unpleasant pressure. The part which supports the soft parts is altogether distinct from that which surrounds the bony structure, so that by merely adjusting each part comfortably the right proportion is obtained, and the difficulty overcome. The manner in which this is done will be seen from the illustration. A gross of perfect clinical thermometers (Kew certificated) was another item in this exhibit which attracted our attention.

An exhibit of a specially interesting character is that of A. HURST & Co. It is devoted entirely to electro-medical apparatus, and contains some excellent examples of sledge-coils, with mechanism for changing the current from 1 to 200 per second. Of incandescent lamps there are good examples, the latest being the "Gastroscope," which is a tiny lamp inserted at the end of a long tube like a stomach-pump. This is passed down the gullet into the stomach, and when the current is turned on the light is sufficiently strong to reveal from the outside any part of the stomach-wall which is thinner than another. This seems incredible, and it did to our reporter; but he did not feel quite equal to swallowing the tube when he was at Nottingham.

Amongst many interesting things which our representative saw in Messrs. Hurst's exhibit was Dr. Ising's "Electrio

Centrifuge," which is represented in the accompanying engraving. This consists of a small electric motor with a swinging arm attached to it. At each side of the arm is a holder for a test-tube (which, it will be noticed, is contracted at the base). When the current actuates the motor the test-tubes are swung round at a very rapid rate, and a centrifugal action is set up in the contents of the tube, which causes any suspended matter to rapidly subside. The apparatus has been devised for collecting urine sediments in a few minutes; but it is obvious that it can have many applications in the chemical as well as the clinical laboratory.

When our reporter visited the museum a considerable number of exhibits were still unpacked, and some firms had taken spaces, and their exhibits are mentioned in the catalogue, whose goods were not in evidence at all.

## LADY-PHARMACISTS.

SOME six months since we gave some particulars of the progress of the movement which has brought ladies into pharmacy, and we showed that, while a few women have qualified for the profession in several European countries, Great Britain, and especially the United States, have been the lands where the ladies seem to have had the best opportunity. When we wrote last December we stated there were then upwards of 130 ladies on the British register of chemists and druggists whose names appeared there by reason of their having been in business previous to 1868. There are, besides, a good many ladies who own businesses, and some who take part in the management of them, who have come into these positions as executors of their deceased husbands. These, of course, do not appear on the register. Then, notwithstanding the obvious difficulties in the way of ladies who wish to prepare for examination, we find that there are at present on the register eight who appear as pharmaceutical chemists, and eleven who have qualified as chemists and druggists.

In response to our request, several of the ladies who have qualified as pharmacists have been good enough to favour us with their ideas of the position and prospects of women in pharmacy, and these will certainly be read with interest.

Mrs. Sinclair, who is in business at Llandudno, writes as follows:—

"I cannot hope to deal with the subject as it deserves, but my personal obligations to the pioneers of a movement beset with difficulties at its outset, and loyalty to those who bore the brunt of the early opposition offered, together with a desire to encourage new recruits, demand the expression of my thoughts on this matter.

"1. *The Object to be Attained from Women's Standpoint.*—'Aim high, and you will strike high,' is a true and useful saying, and well would it be, when education is completed and life is before young women, that they should form a definite plan for its best development, and thoughtfully

## SELECT SOME HONOURABLE CALLING.

Where home duties demand the surrender, in a life of self-sacrifice for those whose right it is to claim it, shall be found a full reward. My words concern others, who are free, and upon whom rests a grave responsibility—a stewardship for which they must render an account. To a thoughtful woman's mind the possibility of qualifying herself for a useful and honourable position in life has a fascination which cannot well be put into words, and such a position is that of a pharmacist.

"Many are the now remunerative callings open to women, but none possess the high privilege wrapped up in what sounds at first the commonplace title—a chemist and druggist. To be a skilled and accomplished chemist is indeed to aim high, and to minister to the suffering with fitting medicine, daily and hourly, in season and out of season, the year round, gives a deep satisfaction, and a wide influence for good.

"2. *The Qualifications Necessary to be a Pharmacist.*—The dictionary must lack one word for the woman, either young or middle-aged, who desires to qualify—namely, I 'can't.' 'No surrender!' whether the difficulties be in the course of study or in view of the examinations, is the only motto permissible. Every possible kindness and consideration on the part of the examiners was my happy experience at Bloomsbury Square, and will be accorded, I am persuaded, to every candidate of my own sex; and if there should be failure at the first attempt, in a longer period of preparation there will be ultimate gain, and success will be attained by the persevering one in the end.

"Other qualifications are yet necessary to be faithful to the power entrusted by the Pharmaceutical Society to the successful candidate (and let me urge the lady-pharmacist to be worthy of her position—forbid that women should fail in this race!), endurance must be exercised, hard work expected,

and no unqualified person may, under any pretext, be invested to do deputy work in a matter so serious as the dispensing of medicines and the handling of potent drugs.

"To be always at the post of duty must be the pharmacist's delight.

"Lastly. *The Results.*—My own experience, looking back upon twenty years spent in connection with this pharmacy, during twelve of which years the full weight and responsibility of its conduct have rested upon myself, warrants me in offering encouragement to others, and calls for much gratitude to a faithful God. Twelve years without a break for rest, and yet able to endure the continual strain with daily renewed vigour, shall testify to His praise.

"The full confidence and kindly esteem of a very considerable resident connection is a happy reward for what has only been their due in daily courtesy, and endeavour to obey the golden rule towards them, on my part. I have

## OCCASIONALLY TRYING EXPERIENCES

when visitors flock to the place during the season. Ladies generally are those who are unwilling to hear a word of explanation. They avow they could not meddle with drugs, and form the strange conclusion that, therefore, no other woman ought. Prejudice such as this must have its time to die, and it is easier to bear as the years go by.

"There are other visitors who, by their quick appreciation of the advantages of a pharmacy conducted by one of their own sex, and their unsolicited promise to support the same, more than make up for the first-named, and these last are yearly growing in numbers and in favour of the need and advisability of women-pharmacists, provided they are of a good order and faithful to their responsible calling."

Miss Flora Mitten, who assists her father at Hurstpierpoint, and who is a not unfrequent attendant at the meetings of the British Pharmaceutical Conference, writes:—

"I do not know that my experiences are very interesting or worth relating. I have so gradually grown into the business, and our community have been accustomed to see me here for so many years, that they now take my presence as a matter of course, and do not, so far as I am aware, object at all. When I was young and inexperienced I used to meet with

## REBUFS AND DISCOURAGEMENT,

but it never occurred to me to take them seriously to heart or to allow them to daunt me. I do not think that since my return home from passing the examinations any objections have ever been made—at any rate, I cannot recall any expression of the sort at this moment. People come to me as freely as they do to my father, and are apparently as satisfied; women come as well, and in many cases have remarked that it was more comfortable to come to me.

"I sometimes hear this sort of thing, 'That's her,' 'Lor,' 'I thought Flora was a girl's name,' 'She ain't very big,' &c., but I can't make much of a howl over that.

"I attended the South London School of Pharmacy to work up for the examinations, and was well and kindly treated by both professors and students, and always included in whatever might be going on without any effort on my part. Whilst there I took the medal in botany and the first certificate in senior chemistry, and am now attached to the school as a visiting examiner."

Miss Louisa Stammwitz writes, from Reigate:—"The business conducted by Miss A. Neve and myself at Paignton was very successful during the time we had it, and we had no difficulty in disposing of it when, through ill-health, it became necessary for me to give up active work. At first there was some prejudice against us as women chemists, but that almost disappeared after a few months, as far as residents were concerned. Occasionally a visitor would come in and say, 'Is anybody at home?' but when we explained who we were we seldom had the mortification of seeing a prescription taken away unprepared. It seems to me that the reasons for women

## PREFERRING THE MEDICAL PROFESSION

to pharmacy are that the social status of the former is superior to that of the latter; the chances of employment after

qualification are greater, appointments being open to women on the zenana and other medical missions; and, lastly, the work is infinitely more interesting. Had a medical school for women been established in London when I commenced my studies, I should have entered the medical profession in preference to pharmacy. Miss Minshall and I had considerable difficulty in obtaining instruction in a chemical laboratory until Dr. Muter very kindly opened his to women."

Miss Stammwitz mentions that the petition signed by Miss Minshall, Mrs. Hart, and herself in 1872 did not obtain them admission to the laboratories of the Pharmaceutical Society, and that it was not until both she and Miss Minshall had passed the Minor some time that the Council of the Society opened its laboratories to women. Before joining Miss A. Neve in business, Miss Stammwitz was for nine years dispenser at the New Hospital for Women, and has had several good offers of appointments in a similar position abroad. She concludes, therefore, that there seems to be a future for women as dispensers as well as in business.

In another letter Miss Stammwitz says:—

"Pharmacy is undoubtedly a very suitable profession, or business—as you will—for women, but so long as 'keeping shop' involves loss of social status, few will go into business. In your article of December 12 you wonder why women prefer the medical profession to pharmacy. I think this loss of caste is one, if not the chief, reason; another is the difficulty of obtaining business training, as chemists have hitherto refused to employ women in their shops, or take them as apprentices. At present few pass the pharmaceutical examinations, although many are employed as unqualified dispensers in hospitals. Most people would be surprised to learn how many women do hold dispenserships in hospitals.

"I believe that, as committees awakened to the importance of engaging only qualified dispensers, women will pass the Minor examination in order to secure appointments. I should not advise them to undertake the worry of the Major, for I am under the impression it will soon cease to exist.

"Speaking from several years' experience, I can say that hospital-work is much more exhausting than business; nevertheless, as long as the absurd

#### PREJUDICE AGAINST 'TRADE'

obtains, women will prefer hospital-work. My experience in business has not been so unpleasant as the picture you present in the December article, for I have only once seen a prescription taken away unfilled, although at first I not unfrequently had to explain that I was a qualified chemist, and had had considerable experience in the preparation of medicines. I always invited inspection of my certificates, which hung in the shop.

"Your articles will be invaluable to women entering the profession of pharmacy, as they will make known the existence of women-chemists, and, I hope, will induce some of the more liberal-minded chemists to employ women."

Miss Margaret E. Buchanan passed in 1887, and was soon after appointed dispenser to the Westminster General Infirmary. She is the only lady student of the Society's School of Pharmacy who has taken double honours, certificates in class, and the silver medal of the Society given by the Council. She has contributed several papers, chiefly chemical, to the School of Pharmacy Students' Association. In reply to our inquiry Miss Buchanan writes:—

"I am unable to say much on the subject of 'the practice of pharmacy by ladies,' as I have as yet only undertaken private work.

"There seems to be an increasing section of the public which recognises the competence of ladies to practise pharmacy, the small numbers of those who qualify and practice being due, I believe, chiefly to

#### THE DIFFICULTIES OF APPRENTICESHIP.

The better parts of cities, therefore, among educated persons, and among the *clientèle* of lady-doctors, seem to be the most suitable positions for women to practise."

Miss Buchanan believes in the future success of lady-pharmacists. "Now that the difficulties of apprenticeship are fewer," she writes, "and it is becoming recognised by the public and the trade that women can be both business-like and well-trained scientifically, the number of lady-pharmacists will doubtless increase as the field further opens up."

Miss A. Neve says:—"Pharmacy is undoubtedly very suitable for women, but many of us have difficulty in obtaining a business training, which, in my opinion, is as essential to success as scientific knowledge. Socially, chemists, notwithstanding their scientific education, are on a par with other tradesmen, and naturally the superior social status of the medical profession has great attractions for women."

The following interesting notes have been furnished to us, in answer to our appeal, by Miss Florence Brittain, of Birmingham:—"I have been

#### IN CHARGE OF A HOSPITAL DISPENSARY

for the past eight years, and an idea of the amount of work and responsibility of this office may be gathered from the fact that the attendances last year were close on 25,000.

"During this time, the following views have been impressed upon me, and I shall be happy if they prove of use to you, or to any lady contemplating taking to pharmacy. I believe I am the only qualified chemist among the women who are at present resident in this district and interested in the work of pharmacy, but trust this will not be the case much longer, for I have in this time had the opportunity of training twelve pupils, most of whom at the present time are doing well in their work.

"Experience has shown me—

"1. That the general idea of pharmacy for a girl is far from a satisfactory one.

"2. That the view is widely entertained that the subject may be taken up as a profitable pastime.

"3. That the fact is overlooked, that, if success is to be the ultimate issue, pharmacy requires earnest, concentrated work.

"4. That the necessity of largely sacrificing time, domestic duties and social calls, whilst preparing for the examinations is not sufficiently recognised.

"Dealing with those who devote themselves with more or less assiduity to the work, I find that only a small proportion proceed to the portals of the examination hall, and this is almost entirely due, either to the heavy handicapping of many by the non-recognition on the part of parents and guardians of the unavoidable outlay of money and time necessary for efficient technical education—a handicapping which does not affect a woman devoting herself to the sister profession of medicine, for, in this instance, all fully recognise that the goal is only to be reached by the unstinted outlay of both these things, as well as the sacrifice of lesser matters; or to the fact that the environment to which she has been accustomed is almost certain to prove an unsuitable one for the studious habits which alone will lead to success. I would, therefore, strongly advise a girl before adopting this profession to see that these obstacles are, as far as possible, cleared away at the outset, and, if she can conveniently do so, to separate herself for a short time from social calls and home ties.

"The popular idea seems to be that much in the same way as a clerkship, pharmacy will give a fair remuneration and is a respectable means of gaining a livelihood, whereas the two conditions are not at all analogous—pharmacy involving a large amount of scientific and technical training which mere clerical work does not, but familiarisation with this work only will eradicate the error.

"With regard to the suitability of pharmacy for women I most certainly consider

## IT CARRIES OFF THE LAURELS,

for none of the objections raised against a woman practising medicine are applicable to it, and it seems so thoroughly to call into full action the womanly characteristics of neatness, accuracy, and painstaking application. Instead of unfitting her for the execution of domestic duties, it is my experience that the training of pharmacy accentuates the perceptive and sharpens the logical faculties, in this way enabling her to face the battle of life equipped in a far more satisfactory manner than before, whether this battle is to be fought as a 'lonely spinster' or as a partner with a desirable helpmate.

"It is among the many soundly-educated girls of the middle-class that I believe pharmacy will make a firm

agreeable break in the three years' practical work necessary to becoming qualified."

Miss Rose Minshull writes as follows:—

"I must leave to my sister pharmacists who are, or have been, in business the relation of their experience therein.

"As the result of many years' hospital work, I am decidedly of opinion that, certainly in women's and children's hospitals, a lady dispenser is the right woman in the right place. Of course she must know her work thoroughly, for she will find it to be more sharply criticised than a man's would be in the same position, keep well posted up in the current pharmaceutical literature, so as to have at her fingers' ends, when applied to, all that relates to new remedies, &c. (I

MISS BRITAIN.

footing, and to whom the previous occupations widely recognised as 'women's work' were altogether uncongenial, calling into play, as so many of these do, the mechanical qualities only. It is for such middle-class girls that pharmacy has, in my opinion, proved quite a boon, giving them definite occupation which, to many, is imperative, and without which they must inevitably suffer, mentally and physically; whereas by adopting this highly pleasant and congenial work they have found a real happiness and begotten a sense of womanly independence hitherto quite unknown to many in this grade.

"The Assistants' examination at the Apothecaries' Hall forms a most convenient stepping-stone to those of the Pharmaceutical Society; it also has the advantage of being readily appreciated among doctors, besides forming an

supplemented my Major work with a course of analysis of food and drugs, and it has been of great value to me in many ways.)

"She must be quick, and able to

## "WORK AMID NOISE

(sometimes in our hall over fifty babies are in full cry at one time) and interruptions without getting flurried, and strong enough to cope with numbers and long hours. She must understand the management of stores, so as to keep her supplies up to the doctors' requirements and yet avoid overstocking. These are not unreasonable qualifications to ask from women, nor unusual ones to be found in them.

"I have held my present appointment for many years, and during all that time my relations with the committees and

medical staff have been extremely satisfactory, and I have never suffered any disadvantage from being a woman.

"As to the difficulty or non-difficulty of obtaining appointments, perhaps I have been exceptionally fortunate, for the two I have held were offered to me, and more than one partnership in business has been proposed to me."

Miss M. E. Neve, who until recently carried on a pharmacy for several years in Eastbourne, says:—"During the time I was in Eastbourne I certainly found considerable prejudice against women-chemists (especially amongst ladies); but as the years went by the prejudice gradually decreased. I was very happy in my work, and my business, though small, was a steadily increasing one." Miss Neve adds that she would have probably been in Eastbourne still but the lease was running out and no reasonable terms could be obtained for its renewal. She concludes:—"You ask my opinion as to whether pharmacy is a suitable sphere for women; from my own experience I should say, Decidedly it is so."

Among English lady-pharmacists it is interesting to note that Miss Isabella Clarke, who was referred to in our previous article as the pioneer of the qualified ladies in England, is now the wife of a pharmaceutical chemist who passed his Major examination on the same day as herself, the numbers of their certificates very properly adjoining. Miss R. C. Minshall passed the Major in February, 1879, and was appointed dispenser to the North-Eastern Hospital for Children.

Miss Lucy E. Boole passed in 1888, and then worked for some time in the Research Laboratory of the Society. The result of her studies was a paper by herself and Professor Dunstan on "Tartar Emetic," dealing chiefly with its purity and estimation by volumetric process. She is stated to have a fair analytical connection and practice.

On this subject we have before us a very lengthy and, we must say, a not very logical letter from a French pharmacist. His aim is to show

#### THE OTHER SIDE OF THE SHIELD.

He notes that we "are urging educated women in straitened or slender circumstances to enter the pharmaceutical profession, under the impression that such a career would be both suitable, easy, and remunerative to the fair sex. You are, however, under a threefold misapprehension." [So is he, for we never advocated the adoption of the profession; we only related what had been done.] "I cannot understand how you, usually so far-seeing, can have advocated such a proposal, which evidently is founded on prejudice and misleading appearances."

Then he proceeds, at great length, to point out the difficulties of preparation for the profession, the long hours and weary and responsible labours, and the scanty remuneration. He continues:—

"After these considerations, do you still think, sir, that this profession (pharmacy) is suitable—I do not say to woman's intellectual qualities, which I believe equal in almost every way to those of man, but to her physical constitution? Nature herself opposes such an idea; wise Nature, whose opinion is unasked, protests against the choice of a profession so difficult and exacting, without rest or respite."

"Before introducing women into unsuitable professions, it would be more rational to consider all the occupations and employments ridiculously and unjustly filled by men—situations which Nature intended to be given to women. Let us first turn out, and replace by the fair sex, the handsome and athletic gentlemen who do not disdain to employ their vigorous muscles in offering to ladies a pair of gloves, a skein of thread, or a yard of ribbon. Let the ladies' tailors and staymakers give place to the weaker sex; in fact, let all these easy and delicate occupations, which do not demand muscular effort, be left to women. When a fairer distribution of labour is made, it will not be the weaker, but the so-called stronger sex, that will need protection. Instead of this, under pretext of liberty and equality, women are urged on to misplaced ambitions, subversive of all reason and order. They are encouraged to quit the modest, but useful place which they hold in all civilised nations, and to enter everywhere into competition with men. It was first the lady-

doctor, now it is the lady-pharmacist, next will come the lady-lawyer, the lady-bailiff—and afterwards? Truly this confusion and promiscuity promises us a merry ending to the present century!"

And why should we not wind up the century merrily? Our man-pharmacist's arguments do not figure very gloriously by the side of the unpretentious but convincing communications which we are privileged to publish from our lady friends.

#### AT THE COUNTER.

"A BOTTLEFUL of Imprecations."—This was the third interruption during a hot and savoury dinner.

"ALLSOPP'S Polands Plaster" and "Magnacea for a baby" are the items on a Worcestershire order sent to us.

FROM HALIFAX.—Customer: "Please, sir, will you give me a bottle of syrup of hypothesis for weakness?"

Customer: "Please, I want a bottle of patent embodiment." Embrocation was supplied.

WHAT A CHEMIST DOES FOR TWOPENCE.—Well-to-do old gent insists upon seeing the principal. He produces about  $\frac{1}{4}$  lb. of lead and an immense pocket-knife, and requests to have a piece cut off that will weigh  $\frac{1}{2}$  drachm. During the operation he lets it out that he has got to know about something that is to do him a lot of good, and is going to try it. After the operation, when he has got his  $\frac{1}{2}$  drachm of lead, he asks for 1 oz. of the very best carbonate of soda. Our conscience-stricken correspondent who narrates this event asks if we consider that 433.33 per cent. on the soda was an outrageous profit on the transaction?

AT A CHINESE COUNTER.—The following specimens are written orders which have been handed over the counter in a pharmacy at Shanghai:—

"Peng quiyara" [this was written by a Japanese, who wanted pain-killer]; "Cachepot oil"; " $\frac{1}{4}$  unse of tarrac acid, 1 unse of glyserin, 1 unse of water"; "Scotch's Emulsion God Liver."

"My sister who has bunions would take it as a great favour if you would send her a set of your calendars" [this is written by someone with a French name].

"2 blood suckers" [this is from a Japanese agency].

"Mulbey water which use in summer time that taste is sweet and color is red."

The following is from Fuh Wo, an employé on a ship: "I am much thankfulness to me to let Has the bearer a nice calendar for this year and then much obliged."

GEOGRAPHY AND CHEMISTRY.—Lady (tremendous swell, whose child has been to Board School): "A pennyworth of Pacific powder." Chemist: "North or South, madam?" Lady (not to be done): "Oh, South, please." Chemist: "Oh, the red?" Lady: "What do you mean by red?" Chemist: "South Pacific is hot, and North Pacific is cold, hence red is South, and white is North." Lady (indignantly): "Indeed, I do not know anything about hence. My child has been to school and caught something in her head; that's the kind I want." Chemist: "Then the North, or white, is required, since it's for the child."

THE title of "Doctor" was invented, so it is claimed, during the twelfth century, when universities were first established. The first person upon whom the title of "Doctor of Medicine" was bestowed was William Gordenia, the degree being conferred by college at Asti in 1329.—*Western Druggist.*

## Scientific Notes:

*On Chemistry, Pharmacy, Botany, Materia Medica, &c. Original, Selected, and Translated.*

## PREPARATION OF CANTHARIDIN.

M. DEBUCHY speaks highly of the advantages of methyl-formic ether for the separation of cantharidin (*Jour. Pharm. Chem.*, xxvi. 13). It is superior to chloroform, ether, acetic ether, and other solvents generally used. It is customary to use carbon bisulphide for the removal of the fat of cantharides, but this has the disadvantage of being a cantharidin solvent. This petroleum ether is not, and is to be preferred. It would have been an advantage if M. Debuchy had stated the sp. gr. and boiling-point of the most suitable petroleum ether for the purpose.

## COLOURING-MATTER IN SHELL-FISH.

DR. JAMES LEICESTER, of Merchant Venturers' Technical School, Bristol, in a note to the *Chemical News*, gives a probable explanation of the change of colours that shrimps and lobsters undergo upon boiling. Concentrated hydrochloric acid in which a few shrimps have been digested acquires a bright purple colour resembling litmus solution. This colour goes after three or four days, and the solution becomes of a dirty-brown colour. The coloration is not caused by any iodine compound, but is probably of an organic nature. Acetic acid and caustic potash give slightly yellow solutions.

## ANALYSIS OF BLACK OILS.

To determine the percentage of tar in black oils the following process is given by Mr. Ernest Speidel in the *Oil, Paint, and Drug Reporter*:—Take 100 c.c. of the oil, add to it 25 c.c. of concentrated sulphuric acid, and stir vigorously with a glass rod for about five minutes; then add about 200 c.c. of clear water-white naphtha, and stir. Allow to stand until the acid settles; then decant. Repeat the washing two or three times, or as often as necessary, so that the naphtha from the last washing is almost colourless. Treat the sulphuric acid from which all the naphtha has been decanted, with alcohol, stir well; the alcohol dissolves the sulphuric acid. Let the tar settle, pour off the alcohol, and repeat the operation until the alcohol is clear. Rinse the tar out of the beaker with a little sulphuric ether, and transfer to a small evaporating-dish, that has been previously weighed, evaporate the ether, and weigh the residue of tar.

## PERNICIOUS SEEDS IN CATTLE-FEEDING STUFFS.

At a recent meeting of the Society of Public Analysts Dr. J. Walter Leather described how castor-oil seed and croton-seed can be detected in cattle-foods, in which they are not unfrequently present. The method is microscopical. First, some of the material is digested in dilute hydrochloric or sulphuric acid (1 or 2 per cent.) for half an hour on the water-bath. The acid liquid is decanted, the food washed well with water, and then digested for an equal time with 1 or 2 per cent. sodium-hydrate solution. Decantation and washing are effected as before, and it is advisable to treat again with dilute acid, so as to minimise the dark colour resulting from the alkaline treatment. All this is preliminary treatment; the detection of the testæ of the castor-oil and croton seeds now remains. These look black under the microscope, and their colour is retained after standing in chlorinated-lime solution for three or four days, whereas the testæ of all other seeds likely to be found in cattle-food are bleached in an hour or two. The prepared sample is, therefore, kept in the bleaching-solution for a few hours, then washed and examined microscopically. In this way Dr. Leather has been able to detect the admixture of one seed each of the castor-oil and croton plants in a pound of coarsely-ground cotton cake. Further details are given in the *Analyst*, page 120, of the delicacy of the method. In the course of the discussion Mr. Bernard Dyer said that sometimes the seed was added accidentally and sometimes intentionally. It had been found in Brazilian cotton meal and cake; and in that case, he believed, it had been accidentally introduced through the castor-oil plant growing as a weed among

the cotton; but in some cases he was sure that it was deliberately added through ignorance. There was an enormous quantity of castor cake produced, especially in tropical countries, which ought all to be used as manure. It was sometimes bought up by people who were ignorant of its poisonous properties. He had recently had a sample of Niger seed cake sent to him for the purpose of examination, with the view of ascertaining whether it contained castor-seed, and he found that it did. Since then he had found a little castor-seed in a sample of linseed cake. He also found a considerable quantity of Niger cake in it, with which the linseed cake had been adulterated, and it seemed not at all improbable that the Niger cake had contained the castor.

## ASSAY OF TEA.

FOR the estimation of the caffeine in tea, Domergue and Nicolas propose the following method:—Boil 50 grms. of the coarsely-powdered tea in 50 to 60 c.c. of water for a few minutes and add 100 c.c. of a 3-per-cent. solution of mercuric acetate; boil for a few moments, and filter, washing the filter with boiling water until the filtrate is colourless. The total filtrate should measure about 300 c.c., and it is to be evaporated on the water-bath to 20–25 c.c. To this is added 2 grms. of calcined magnesia and 75 grms. of sand or broken glass, the mixture dried, and exhausted with chloroform or benzine in a Soxhlet tube. From the chloroform the alkaloid is recovered in an amorphous state, as it contains a little waxy matter, but it may be freed from this by dissolving in boiling water and crystallising. The process takes about three hours to perform. It is generally considered—indeed, has been proved—that the caffeine content of tea bears little or no relation to its price, but Domergue and Nicolas give figures which show such a relation. They are as follows:—

|                   | Price per kilo. | Caffeine per cent. |
|-------------------|-----------------|--------------------|
|                   | f. c.           |                    |
| Assam .. ..       | 8 85            | 4.39               |
| Pekoe flower ..   | 7 50            | 4.25               |
| Pekoe .. ..       | 7 90            | 3.78               |
| Congou Manning .. | 7 60            | 3.20               |
| Pekoe Congou ..   | 6 60            | 2.74               |
| Pekoe Orange ..   | 6 60            | 3.49               |
| Souchong .. ..    | 6 10            | 2.56               |
| Congou .. ..      | 5 50            | 2.75               |
| Souchong .. ..    | 4 35            | 1.20               |
| Congou .. ..      | 4 00            | 0.91               |

The *Apotheker Zeitung* calls attention to the difference between the results of these observers and others, and quotes Waage's figures as evidence that most teas show caffeine about 2 per cent. It seems to us that a comparative examination of existing methods of assaying tea is desirable.

## AVERAGE YIELDS OF ALKALOIDS.

M. ADRIAN finds that on a manufacturing scale he obtains the following yields of alkaloids from the respective drugs:—250 to 350 grammes of atropine from 100 kilos. of commercial belladonna-root containing 12 to 20 per cent. of inert matter (moisture, stem, &c.).

50 to 55 grammes of atropine from 100 kilos. of fresh belladonna leaves and branches.

11 to 12 grammes of atropine from 100 kilos. of fresh belladonna stems and leaf-stems.

32 to 34 grammes of atropine from 100 kilos. of fresh belladonna herb (leaf and stem together).

80 to 100 grammes of amorphous aconitine, and 100 to 150 grammes of crystallised aconitine from 100 kilos. of commercial aconite-root, containing 15 per cent. of foreign matter (moisture, &c.), when treated with cold alcohol. A total of 150 to 180 grammes amorphous aconitine is obtained when digestion with alcohol is done on the water-bath.

500 to 600 grammes of pilocarpine nitrate from 100 kilos. of jaborandi-leaves.

800 to 1,700 grammes of sparteine sulphate from 100 kilos. of dried broom.

120 to 180 grammes of physostigmine sulphate from 100 kilos. of Calabar bean.

Some commercial jaborandi-leaves yield only 100 grammes of pilocarpine nitrate for 100 kilos. We take these figures from an article on the therapeutic uses of alkaloids, by Dr. G. Bardet, in *Nouveaux Remèdes*, page 244.

# English Pharmacies Abroad.

## TWO OTHER SHOPS IN GENEVA.

One of the first pharmacies described in this series was an important modern shop in Geneva. There is still another business in the old city of Calvin, however, which may justly lay claim to be mentioned among British pharmacies abroad. That business is Mr. Jules Ackermann's Anglo-American pharmacy in the Rue des Allemands. The outside of the shop is shown in our first illustration. The origin of the business which has now devolved upon Mr. Ackermann, who is of German birth, is lost in the mist of ages. All that is positively known of it is that it existed and flourished in 1602, and that in 1615, it was in the hands of one Abraham Le Royer, a Huguenot refugee, whose descendant is now President of the Senate of the French Republic. The Le Royer family owned the business, and carried it on in direct succession until 1840. The name of the illustrious

THE PHARMACIE ANGLO-AMERICAINE IN GENEVA.

chemist Dumas is indissolubly associated with Mr. Ackermann's shop, in which the young Frenchman was engaged as an assistant while pursuing his studies at Geneva University under Pictet, Saussure, de Candolle, and others.

It was in Mr. Ackermann's shop that the use of iodine in medicine originated. Young Dumas had devoted considerable time to the study of the chemistry of the substance, and, having ascertained its presence in the sponges which were sold in the shop, demonstrated the fact one day to a Dr. Coindet, a local medical man of some repute. The doctor took all the credit for the discovery, but gradually young Dumas's merits as a chemist became known, and the back parlour of the old pharmacy became the meeting-place of many of the most famous men in Switzerland, who gathered there to hear the young man expound his views. Since the last of the Le Royers left the shop has had three proprietors, the second of whom was the "N. Bastard" whose name still figures in the *raison sociale* of the firm. Mr. Ackermann styles his pharmacy the "Pharmacie Anglo-Américaine," a title which appears to be fully justified by the amount of patronage bestowed upon him by British and transatlantic visitors, and by his knowledge of their requirements. Mr. Ackermann carries an extensive stock of remedies favoured by English-speaking customers, and employs an English assistant for the express purpose of ministering to the wants of our country-

men and their first cousins. Mr. Ackermann is the sole consignee for Switzerland of several British manufacturing firms, and in his bonded warehouse in Geneva large quantities of Allen & Hanbury's goods, Vinolia soap, Horsford's acid phos-

INTERIOR OF MR. ACKERMANN'S PHARMACY.

phates, and other pharmaceutical goods are always awaiting withdrawal from Customs control. The duty upon non-alcoholic patent-medicines in Switzerland is equal to about 40 per cent., and upon alcoholic ones 70 per cent.

## THE PHARMACIE GOEGG.

But yet another pharmacy in the many-tongued city by the lake claims our attention. We mentioned Goegg's pharmacy casually in our last article on Geneva, and will now devote a few lines to a description. The fittings are in carved oak, and the shop-rounds have the modern shield-enamel labels and cut globular stoppers.

The dispensing-department opens out from the pharmacy through an ornamental archway. It contains the usual oxygen gasometer and the principal galenical preparations of the Swiss, German, English, and United States Pharmacopœias and the French Codex. The staff consists of four qualified and one unqualified assistants, in addition to Professor Goegg, the proprietor, who, when not conducting his class, works at his business as hard as any man. "Business hours," says an English pharmacist who at one time was engaged in Mr. Goegg's business, "were from 9 till 9, with one and a half hour for dinner, one for tea, two evenings weekly off at 6 o'clock, and every other Sunday free.

## POLYGLOT DISPENSING.

"A steady stream of customers would set in soon after 10, increasing from 12 to 5. English, French, German, and Italian were frequently being spoken at the same time, and the big prescription-book would occasionally show four consecutive prescriptions emanating from as many countries. The daily average of prescriptions from May to September inclusive was about 180. Dispensing was undoubtedly the backbone of this business, the prescribing being carefully limited to the English-speaking customers, and generally done by the senior English assistant. Large quantities of pills were frequently ordered—50, 100, or even 250—and were always turned out in bottles. Cachets were also a favourite medium for powders—25, 50, or 100 being the number usually prescribed.

"For specialties we had medicinal wines, such as *quinquina* (three varieties), coca, kola, &c. These had a very large sale, and were put up in litre and half-litre bottles, bearing most attractive labels, and capsuled. *Alcool de menthe* and pastilles were in exceptional demand. Weak antiseptic solutions, such as *sublimé*, *acide phenique* and *borique*, sold well,

and were kept ready in litre bottles; also medicated wools and tissues of several kinds. Urine-analysis was frequently required. The inhalation of oxygen was quite a solemn ceremony. The patients would walk straight through and sit down at a small table placed by the gasometer; would then proceed to connect their own glass mouthpiece with the rubber tube leading from the main, and take their usual measurement of oxygen as an ordinary mortal might his bitter, and at about the same price—viz, 50 cen times."

#### BEYROUTH.

This is the shop of Mr. Murad Baroody, the Christian pharmacist of Beyrouth, in Syria, whose business was described by Mr. Burroughs in one of the interesting letters which that gentleman sent us from the East last year. Mr. Baroody is represented as about to take leave of a customer on horseback, while the idle apprentice, with true Oriental supineness, lazes his time away lounging against the stable-door upon the left, and even the industrious apprentice to

MURAD BAROODY'S SHOP IN BEYROUTH.

the right cannot refrain to quit his mortar for a moment to cast a look at the departing client.

#### HE READS "THE CHEMIST AND DRUGGIST" AND PROSPERS.

"Mr. Baroody," wrote Mr. Burroughs at the time of his visit, "has been a subscriber to THE CHEMIST AND DRUGGIST for twelve years. The DIARIES for the past four years are always before him on his desk, and the older ones he keeps for reference at home. I asked him how he came to buy certain English chemical and pharmaceutical products. He replied, 'From seeing the advertisements in THE CHEMIST AND DRUGGIST.' So thorough has he been in this respect that his pharmacy is the recognised headquarters for English products. I noticed in his stock large quantities of Howards' quinine and cocaine, iodoform, &c., Squire's chemical food, Fellows's syrup hypophosphites, Allen & Hanburys' tonga, cod-liver oil, and malted food, Pears' soap, Eno's salt, Cockle's, Beecham's, and Holloway's pills, lactopeptine, and Fletcher's liquors, largely bought through seeing them in the CHEMIST AND DRUGGIST advertising columns."

Mr. Baroody has done much to develop the great natural resources of his country. He manufactures soap, olive oil, and orange-flower water, and, in addition to his chemist's business, does a considerable wholesale trade in pharmaceutical goods in his district.

#### TRIESTE.

British pharmacy in the thriving Austrian port of Trieste is represented by the "Farmacia Serravallo" (the population of Trieste is by nationality predominantly Italian), of the appearance of which the two subjoined sketches furnish some idea. With the fondness of the true Southron Latin for names and titles of sacred history, the originator of Serravallo's business called his shop "Farmacia Al Redentore," or At the Sign of the Saviour, and that name it bears until this day.

The new premises in the Palazzo Contana, to which the pharmacy was recently removed, are of magnificent dimensions, in thorough accord with the beauty and costliness of their decorations. The dispensary is a hall of enormous dimensions, designed by one of the best-known Italian architects. No other materials than mahogany, oak, olive-wood, and marble are used in its construction. A wide gallery runs along three sides of the hall, and the ceiling is decorated with inlaid wood. To the right of the dispensing

department are a consulting-room (where medical assistance may be summoned at any hour of the day) and the private office of the manager. To the left is a room fitted as an

PHARMACY AT THE SIGN OF THE SAVIOUR, TRIESTE.

ambulance, and a department for medical examinations. At the back of the pharmacy is an extensive laboratory, and behind that, separated from it by a glass partition, a room

for chemical analysis. The pharmacy is connected with a large warehouse for the wholesale part of the business.

INTERIOR OF SERRAVALLO'S PHARMACY IN TRIESTE.

Mr. Serravallo is agent for several English houses—Burroughs' Wellcome & Co. among others.

#### ZÜRICH.

The ancient city of Zürich also boasts its "Anglo-American Pharmacy," of the outside of which we here give a representation. This business is owned by Dr. C. Dünneberger, who acquired his knowledge of British pharmacy at the establishment of Mr. Groves, in Florence. He now appears to cater for a considerable section of all the nations that on earth do dwell, for we notice that his business is variously entitled by him, "The Anglo-American Pharmacy," "Deutsche Apotheke," "Farmacia Italiana," and "Pharmacie Internationale." The pharmacy is situated upon the ground floor of a fine modern five-storey building, richly

DÜNNENBERGER'S PHARMACY IN ZÜRICH.

ornamented in red sandstone, and within a couple of minutes' walk of the quay on the Lake of Zürich. The interior of the shop is all handsomely fitted in nut-wood. The dispensing-office is separated by a curtain from the stock-room, crude-drug room, and laboratory. Dr. Dünneberger, who is a Swiss himself, has roamed for a whole decade through Central Europe, plying his profession of a chemist's assistant under various outlandish masters, and gathering a motley store of information as he went along.

#### UNDER AFRIC'S SKIES.

The next picture is a representation of Mr. Norwood Coaker's recently-opened new shop in Jagersfontein, Orange Free State. "Jagersfontein" signifies "The Huntsman's Spring," and the shop is called the "Iron Apotheek" because it is wrought in burnt brick, upon a diamondiferous soil, beneath a copper sky. It is hoped to prove a gold-mine to its proprietor, whose iron perseverance, we trust, will lead him on to further fortune. Mr. Norwood Coaker, the proprietor, opened his business in September, 1880, in a small iron shanty about 10 feet by 12, to which he afterwards added a "wing." The "old show" now stands discarded next to the new erection, like a dull and insignificant

chrysalis-envelope beside a gorgeous and free-winged butterfly. The whilom chrysalis is now used as a store-house. In after-years, perhaps, when Bloemfontein shall have become a great world-centre, we may be able to present our subscribers with a picture of some eleven-storeyed "Norwood Coaker Drug Company" palace, beside which the neat shop our friend now occupies shall ineffectually pale. It is only in a new country that a successful chemist can keep his cast-off premises alongside of him, as he outgrows them, to remind him of his small beginning, like stepping-stones by which he has risen to higher things. Jagersfontein is purely a diamond-mining community, and the noise of blasting by dynamite is to be heard at intervals on every day of

the year with the solitary exception of Christmas, on which day, at any rate, our black brethren will not work at any price. The innocent negro is well up to dates, and on December 25 the white boss has to regale him most royally on beef and brandy (supplied *ad libitum*) as sure as the sun rises. The principal drug supplied to these gentry is, of course, the wonder-working magnes. sulph. They do not believe in pills. Large quantities of succ. limæ, *raw*, are also a favourite remedy with the black employés. Cuts and deep gashes on the occiput and sinciput from falling stones form the main portion of the minor surgery required, whilst more fatal accidents by dynamite and the falling of large quantities of ground are but too painfully frequent. The neighbouring Boers, who send their sheep and cow dung to market, where it is sold for fuel, are very fair takers of medicine, although, unfortunately for "the trade," they mostly prefer to buy their household Dutch medicines from the stores, where they get their coffee and sugar, and to which they sell hides, skins, and other produce. There is no idle population in Jagersfontein; everyone has to work, and visitors are few and far between. At times, however, some English globe-trotter, or colonial magnate returning from some high political business in Bloemfontein, condescends to visit the Golconda of the Free State. Mr. Coaker has just opened another business at Bloemfontein.

In our sketch, which is reproduced from a photo taken in 1891, Mr. Coaker is represented standing by his wife and child together with some friends and relatives. The clergyman is the Episcopal rector of Fauresmith, the Rev. S. W. Steven, whose name is a household word all the country round. Mr. J. H. Clempson and Mr. Albert Tozer, two London assistants, are on the stoep, whilst the native boy is in close proximity to the pestle and mortar.

HAMBURG has made wonderful progress as a port during the past fifty years. In 1841 it did 15 per cent. of the shipping of the world, England having 46 per cent. of it, and other countries 39 per cent. Now Hamburg has 37 per cent, and other countries than England 18 per cent.

NATAL PARAFFIN.—According to Mr. T. A. Aitken, B.A., Natal shale gives excellent yields of paraffin wax and sulphate of ammonia, and the oil obtained is equal to the best American, and producible at one-third the cost. A London syndicate has despatched an eminent Scottish oil-chemist to the colony to test these conclusions and take further steps. Oil from Dundee shale is of specific gravity .820 and flash-point 140°.

## INK.

THE manufacture of writing-ink is still carried out in an exceedingly empirical fashion, although there are undoubtedly a number of noted makers who have endeavoured, and that successfully, to bring the teachings of science to bear upon the composition and permanence of their products. A glance at any of the best books of reference shows, however, that the old empiricism and the modern exactitude are curiously blended together, and there is really no well-defined line of procedure to guide the novice who ventures into the atramentary region. It is, therefore, with pleasure that we give publicity to the following account of an important research on the subject by the well-known pharmacist Dr. William Inglis Clark. This research, we may say, was undertaken and completed when Dr. Clark was a laboratory assistant to Duncan, Flockhart & Co., in which firm he is now a partner, and, under the title "An Attempt to Place the Manufacture of Ink on a Scientific Basis," it was submitted to the Edinburgh University as a thesis for the degree of Doctor of Science. The thesis met with commendation from the University authorities, and, having served its purpose in securing him the degree, the writer did not think of publication; but, at our request, Dr. Clark has sent us the first part of the work, to deal with it as we think fit. The other two parts contain analytical details, and the one that we now deal with sufficiently expresses the conclusions of the research. We ought to say that the thesis was written fourteen years ago, but, as far as we are aware, no one—at least, in this country or America—has gone over the same ground.

Towards the beginning of this century a Dr. Lewis made some attempts to place the manufacture of ink on a satisfactory basis, and he succeeded so far as to determine that an excess of iron salt in the ink is detrimental to its permanence, such ink becoming brown on exposure. Three parts of galls to one part of ferrous sulphate were the proportions which he fixed upon as the best. He did not use boiling water in extracting the galls, and this has to be taken into account in considering exact experiments, for cold water would not, as he used it, extract more than half of the gallo-tannic acid from the galls. This observer was the first to introduce logwood as a tinctorial agent, and he made the interesting and important observation that acetic acid in the menstruum provides an ink of greater body and blackness than sulphuric acid does—a circumstance due to the smaller resistance of acetic acid to the formation of iron gallo-tannate. This observation has since been utilised by dyers. In 1798 Ribancourt determined that an excess of galls is quite as injurious to the permanence of ink as an excess of iron, but Dr. Clark's research does not sustain his explanation that this is due to the reducing action of the gallo-tannic acid. Dr. Bostock communicated a paper to the Society of Arts in 1830 in the course of which he stated that the tannin, mucilage, and extractive matter are "without doubt the principal causes of the difficulty which is encountered in the formation of a perfect and durable ink. For a good ink the essential ingredients are gallic acid and a sesqui-salt of iron." In this point Dr. Bostock peculiarly hit the mark. Owing to his working with galls he was unable to make decisive experiments, but he concludes, and that rightly, that in proportion as ink consists merely of gallate of iron it is less liable to decomposition and any kind of metamorphosis.

The introduction of blue-black ink is the next phase of the development towards modern methods which is noticed. The object of adding a dye is to give temporary colour to the ink, and, as indigo-paste is used, it has been assumed that this keeps the iron gallo-tannate in solution. Any virtue of this kind which indigo-paste possesses is more likely due to the sulphuric acid which it contains than to the indigo itself. The essential part of the paste required is the sulpho-indigotate of sodium, now commonly called indigo carmine. The commercial paste contains varying proportions of free sulphuric acid, and it is essential in ink-manufacture that only the minimum of this constituent should be admitted. It is somewhat difficult to determine the proportion of acid present by the ordinary alkalimetric methods, but, by treating a known weight of the paste with excess of barium carbonate, and absorbing the evolved carbonic dioxide in a

weighed potash bulb, the amount of sulphuric acid can be accurately obtained. Three samples of paste, which were found to be very suitable for ink-making, gave the following figures:—

|           |       |                         |   |      |                                     |
|-----------|-------|-------------------------|---|------|-------------------------------------|
| Sample A, | 0.45  | per cent. $\text{CO}_2$ | = | 1.0  | per cent. $\text{H}_2\text{SO}_4$ . |
| " B,      | 0.319 | "                       | " | 0.71 | "                                   |
| " C,      | 0.235 | "                       | " | 0.52 | "                                   |

The paste should not, therefore, contain more than 1 per cent. of  $\text{H}_2\text{SO}_4$ , and when it is remembered that as much as 40 per cent. has been found in commercial paste, the importance of watching this factor becomes apparent. An excess of acid in the ink corrodes pens, delays the darkening of writing, and sometimes perforates the paper. Apart from these objections it was noticed in the course of the research that up to a certain point the addition of sulphuric acid was advantageous, and then just the opposite. This is shown by the following figures, obtained by exposing equal measures of an experimental ink (536 grammes each of tannin and pure  $\text{FeSO}_4$  in 50 c.c. water plus the amount of acid indicated) in cylindrical jars:—

| Acid added = $\text{CO}_2$ | Time exposed | Weight of ppt. | P.c. of Fe in ppt. |
|----------------------------|--------------|----------------|--------------------|
| Per cent.                  | Hours        | Grm.           |                    |
| 0.0                        | 214          | 0.1043         | 8.3                |
| 0.01703                    | 643          | 0.0323         | 8.66               |
| 0.03406                    | 643          | 0.0403         | 10.42              |
| 0.05109                    | 643          | 0.0198         | 8.53               |
| 0.06812                    | 2,000        | 0.000          | 0.00               |

The stability of an ink precipitate depends upon the amount of iron which it contains, and which on no account should be less than 8 per cent. More than the highest amount of acid above indicated throws down a white granular precipitate.

Similar experiments to the foregoing with gallic acid revealed the fact that no precipitate whatever is obtained under precisely similar conditions. This point followed up explained in a measure why a gall infusion prepared with hot water is not suitable for a blue-black, whilst a cold-water infusion is. In the latter case a comparatively small percentage of tannin is extracted from the galls, while much is extracted with hot water, and the consequence is that on adding the indigo-blue the colour of the latter is not brought out as it should be. Substantially the same thing occurs with ink made with the respective acids, although the blue colour remains for a considerable time unimpaired in a tannin ink, and it appears to be due to the fact that ferrous tannate reduces indigo-blue to indigo-white, a change which the low reducing-power of ferrous gallate does little to effect. The vegetable matter present in common inks facilitates the destruction, or, rather, alteration and precipitation, of the indigo, for the dye appears in the iron precipitate, and may be extracted from it with boiling water.

The investigation having demonstrated the superiority of tannin and gallic acid to galls, the opportunity was taken to determine the correct ratio of tannin and sulphate of iron to be used for ink. As in experiments previously mentioned, samples of ink were made containing different proportions of essential ingredients, exposed, and the percentage and nature of the precipitate determined. The results show that:—

1. The amount of precipitate increases as the proportion of iron to tannin is increased.

2. The composition of the precipitate is so variable as to preclude the possibility of its being a definite body. Increase of iron in the solution has not at first any effect on the composition of the precipitate, but afterwards iron is found in it in greater but not proportional amount.

3. At one point the proportions of iron in the precipitate and in solution are the same, and this is at between 6 and 10 parts of iron to 100 parts of tannin.

4. The proportion of iron in the precipitate varies with the length of time the ink has been exposed. At first the precipitate contains 10 per cent. of iron, but by-and-by a new one having only 7.5 per cent. is formed, and in from forty to seventy days we find one of 5.7 per cent., resembling  $(\text{C}_{27}\text{H}_{19}\text{HO}_7)_2\text{Fe}_2$ . Simultaneously iron increases in the ink (proportionate to the tannin). These results differ markedly from those of Wittstein recorded in Gmelin's "Chemistry."

5. These results show, and practice confirms, that 16 parts of iron (80 ferrous sulphate) and 100 parts of tannin are best for ink-manufacture.

The research now travelled in a direction which accumulating experience showed to be obligatory. Blue-black tannin ink lost colour, and the reducing nature of the tannin tended to the formation of a highly objectionable precipitate in the ink, which made writing anything but a pleasure. These two faults were doubtless linked together in some way, and seemed not to exist when gallic acid was used, for ink so made was found to precipitate only after long exposure, it required no free acid to keep the precipitate in solution, retained the indigo-blue colour for a long time, alkalis did not decompose the ink, and provided blacker and more permanent writing. It is also notable that one of the most popular English blue-black writing-inks is a gallic-acid one. Determination of the correct proportions of gallic acid and ferrous sulphate to use was the subject of prolonged experiments, which were conducted on similar lines to those already detailed. The conclusions as to precipitation were also similar. Thirty parts of iron (150 of ferrous sulphate) and 100 parts of gallic acid were found to be the most suitable proportions for ink-making. It is advisable, however, not to discard tannin altogether, owing to the slow blackening of the gallic-acid ink, and a little tannin gives initial blackening and body, while it is absolutely necessary for copying-ink. Initial blackness can also be ensured by oxidising 21 per cent. of the ferrous sulphate without adding the extra acid necessary to the formation of a ferric salt.

The concluding portion of the research was devoted to the influence of sugar upon the permanence of ink, and the results of the experiments are summed up in the following sentences:—"It would be injurious to add 3 per cent. of sugar to a tannin ink, while from 4 to 10 per cent. would be quite allowable. Most copying-inks contain about 3.5 per cent. of sugar—not far from the critical amount. With gallic acid more than 3 per cent. of sugar hardly varies the precipitate, but the importance of this point is somewhat diminished by the fact that the presence of sugar is by no means necessary in a writing-ink. Dextrin is a much superior substance to use. Curiously this body rapidly precipitates a tannin ink; hence it is useless for copying-ink, but for the gallic ink it is an excellent thickener."

While the thesis does not profess to exhaust the whole subject, it is apparent from the abstract that many points of difficulty are explained, and in the light of the knowledge thus recorded that it is possible to carry on the manufacture of gall ink in a rational way.

#### NEARLY CAUGHT.

THE story which I am about to tell, writes a Belfast correspondent, relates to an occurrence which happened four years ago, when I was an assistant in a medical hall in an inland county in Ireland.

I had often thought of sending you an account of the affair, thinking that it might be interesting to other members of the trade, and being encouraged by those of my friends to whom I told it; but I have not hitherto had such a favourable opportunity as the present, since I am now in that exasperating, waiting-for-something-to-turn-up, condition, which the great Wilkins bore with so much fortitude.

The town was small, and situated on the banks of the Erne. The inhabitants numbered about a thousand, and were, in general, far too healthy for the successful running of a medical hall, so that the assistant had not much difficulty, at close of day, in totting up his customers; but on market-days, from 10 in the morning until 5 or 6 in the afternoon, there was a perfect deluge of customers, and all in the greatest hurry to catch the last train, or the last cart, or the last something or other.

On these days it was all the unfortunate assistant could do to get a morsel jerked down at intervals to prevent collapse. Well, it was at the close of such a day's business

that, pretty well exhausted with hunger and fatigue, I was going to close the door for the night, when I was interrupted by a stranger. He was a little old man, scarcely 5 feet in height; his clothing was of the muddiest description, and had belonged to a man of much greater stature, for though his trousers were repeatedly turned up, they still kissed the ground. His coat was of the "Artful Dodger" type, and his hat was only stopped from falling over his head by the well-developed auricular appendages, and, in conclusion, he carried a blackthorn.

"Well, my man?" said I, rather sharply, for I did not think him a likely customer, but one of those travelling mendicants who pass their lives travelling from town to town, and subsist on charity, or theft, or both.

Said he, "God save yer 'oner; wud yer 'oner take a luk at this an' tell me if its goold, if yer plaze?"

While he was speaking, he fumbled in his pockets, and, after carefully looking around, apparently to see that no person was looking, he produced a small packet, and when he had taken off a considerable quantity of paper wrapping, he handed me a watch-chain; it was large and heavy, but the pattern was so coarse and inartistic that I could not conceive it possible that it was gold, so I jestingly told him not to allow his expectations to rise too high. Then I applied a drop of nitric acid, and awaited, expecting to see effervescence, and our familiar friend copper nitrate; but I was not a little taken aback to find the chain remain clear and bright; I then applied the acid to several parts of the chain with a like result. I thought surely there must be something wrong with the acid, so I took down a fresh bottle, s.g. 1.42, and applied it as before; but it had no more effect than the other. At this stage I was pretty well convinced that the article was gold, or at least plated, yet I put the chain into a small beaker, and covered it completely with the acid; of course, it remained unaffected. While I was engaged in examining the chain, the old man kept up a running commentary, such as "If yer 'oner had iver an ould pair o' boots, shure they wud be more use to me than that chain," and "If yer 'oner wud give me five shillin's ye cud keep it," together with a good deal more of the like.

I am afraid that, at this point, my conduct was far from honourable or straightforward, inasmuch as I was purposing to take advantage of this old man's ignorance to enrich myself at his expense; but I trust that my brethren will be more sparing in their condemnation of me when they understand how my sin was punished. I was still making a pretext of examining the article, but was indeed only considering the advisability of giving him a crown and getting rid of him; but there was the rub. I knew he would take up his quarters in the town for the night, and he might be prompted to babble about our transaction, and, in all probability, he would come back and demand more; and, besides, I should get shown up as a sharp dealer. I decided to put him off until the morning, pretending that I was going to make a more careful examination of it, then give him 5s., and hope for his speedy departure. I asked him how he came by it, and his story was that he had been at a fair that day, seven miles distant, and he had found it on the way. I still kept up the pretext of examination, and having placed a retort-stand on the counter, I applied the heat of a spirit-lamp, and was engaged in chatting with the old fellow when the contents of that beaker were seized with convulsions; red fumes came off galore. In attempting to remove the beaker to the sink I was severely burnt, and my fingers were a beautiful yellow colour for a month or more.

Eventually, when the row had subsided, the mahogany counter was beautifully etched, the pharmacy was filled with NO<sub>2</sub> to the point of suffocation, and the cause of all this mischief, bereft of all its golden colour, had shrunk, as if ashamed of itself, into a remote corner of the beaker, looking like badly worn tinplate. I reached the old man the remains of his chain, expressed my sorrow that it was not gold, and went home that night with the feelings of Whang, the miller, when he found his mill had fallen.

A clergyman to whom I told the circumstance at the time said that he had heard it was a common practice with sharpers to coat cheap jewellery with wax or vaseline, and then present it to the unwary assistant, who, in many cases, tumbled to the trick. Whether this is true or not, I cannot say; but I have never heard any other explanation.

## PASSING THE MINOR BY HOME-STUDY.

THE new Minor is such a comprehensive examination, and requires such a volume of practical work, that it has become more and more an examination for which students require the special training afforded by schools of pharmacy. But that efficient preparation may be done by home-study is shown by the following paper, sent to us by Mr. Thomas Mackenzie, of Inverness, who recently passed the examination. The particulars given by Mr. Mackenzie show how anyone similarly circumstanced may make the most of the spare time that falls to the lot of the chemist's assistant. To the paper we append particulars of the practical work which the writer had to perform at the examination.

## THE PREPARATION.

About a year and a half ago, I attended the Chemists' Assistants' and Apprentices' Association's lectures in chemistry, pharmacy, and materia medica for about three months, when the session came to a close. Having acquired an elementary knowledge of chemistry, and been granted the use of their laboratory, I resolved to work for the "Minor" alone. I will describe each subject separately, and my mode of preparation.

In chemistry I read "Attfield," both inorganic and organic, according to the requirements of the new schedule. I also read Buckmaster's "Inorganic Chemistry," and found it very useful for the non-metals. In qualitative analysis I used Dr. Stevenson Macadam's book for the common salts in everyday use, but for the rarer salts, such as hypophosphites, valerianates, permanganates, salicylates, and a few others, I had to resort to Attfield's.

For volumetric estimations I read "Attfield," pages 715 to 746, which contains all the necessary information for candidates. There is also a very good article on volumetric analysis in THE CHEMIST AND DRUGGIST for September 26, 1891, which should be read by all students. I prepared all my standard solutions, and estimated nearly all the substances given in the B.P., including HCN, two samples of which yielded 2.07 and 2.16 per cent. respectively. The apparatus I used was a Mohr's "burette," graduated on the metric system, and a set of gramme weights.

For the extraction of the alkaloids I used a mortar and pestle, Florence flask, a separator, funnels, and a few bottles. I made duplicate assays of nuxvomica, opium, and cinchona, according to the directions given in the B.P. I prepared spirit. ætheris nitrosi, and estimated it by means of Allen's nitrometer; also alcohol, chloroform, ether, æther. purus, and æther. aceticus by means of an ordinary retort, with wide-mouthed bottle as receiver, and instead of Liebig's condenser I used a wet cloth.

In physics I read "Wootton's Problems," and practised taking specific gravity by means of ordinary bottles and scales. For the estimation of carbon, hydrogen, oxygen, and nitrogen in organic compounds I read "Attfield," pages 782 to 788. The construction of the barometer and thermometer is also found in "Attfield."

In pharmacy and dispensing I read the B.P., and noted the various methods in making galenical preparations. I received much assistance from THE CHEMISTS' AND DRUGGISTS' DIARIES for 1886 and 1887 and "The Art of Dispensing." In the shop I prepared a great number of galenical preparations of daily occurrence, and practised plaster-spreading. I also practised after hours the preparation of such things as syrup. ferri. iodidi, green extracts, emulsions, aqueous solutions of resinous tinctures, green extract and tannin suppositories, opium and acetate of lead suppositories, camphor, carbolic acid, creasote, croton-oil pills, and a few others as mentioned in "The Art of Dispensing." Proficiency in this department can only be acquired by practice.

For botany I read Edmond's and Balfour's, and, having got up the necessary information as required by the schedule, I betook myself to fields and gardens for practical work. I studied minutely all the parts of the flower and inflorescence,

the methods of reproduction in phanerogams and ferns. With the microscope I examined the various plant-tissues, sections of dicotyledonous, monocotyledonous, and cryptogamic stems, and pollen-grains and hairs.

In materia medica I read "Wills" and "Gerrard," and learned to recognise all the specimens in the B.P. and those appended in the schedule, got up their active principles, habitats, sources, their chief characteristics, and the preparations into which they enter, which is all that is required in this subject.

For prescription-reading the only text-book I read was Pereira's "Selectæ Prescriptis." I had also a number of prescriptions to dispense daily.

## THE EXAMINATION.

In pharmacy I had to prepare infusion of senega, and the following prescriptions to dispense, the time given being three hours:—

|                     |    |    |    |         |
|---------------------|----|----|----|---------|
| Sodii carb. ..      | .. | .. | .. | gr. xx. |
| Morph. acet. ..     | .. | .. | .. | .. j.   |
| Infus. senegæ ad .. | .. | .. | .. | 3vj.    |

Sig.: Take a sixth part every sixth hour.

|                          |    |    |    |         |
|--------------------------|----|----|----|---------|
| Ferri et quinin. cit. .. | .. | .. | .. | gr. ij. |
| Strychninæ ..            | .. | .. | .. | .. ½    |

Ft. pil. Mitte tales xij.

Sig.: One after food.

| Ol. menth. pip. ..     | .. | .. | .. | gtt. iij. |

M. et ft. pulv.

Divide in pulv. duodecim.

## PRACTICAL CHEMISTRY.

I had the following given to test:—

- I. A very dilute portion of HCN neutral to test-papers.
- II. Citrate of bismuth.
- III. Strychnine.
- IV. To find out solution of soda, and to test its strength volumetrically.
- V. Zinc acetate to test.

CHEESE-MAKING and the acidity of the milk or whey bear a relation to each other. The Bath and West of England Society have had the matter investigated, and it was found possible to make cheese in such a way as to be guided in judging the condition of the curd by determinations of acidity alone. The product was a decided success in every respect. The average acidity of the mixed milk before adding rennet was .24 per cent., but on setting the whey only showed .16 per cent. of lactic acid. When the whey showed a percentage of acidity slightly greater than that in the milk before renneting, the process was sufficiently advanced to draw off the whey and pile the curd. Determinations of acidity in the later stages show that the careful development of definite amounts of lactic acid is essential to success. The bacteriological observations also prove that most of the organisms which get into the milk are not able to exist in an acid material, consequently by ensuring a proper development of acidity in the curd we destroy their activity, which would otherwise spoil the cheese. Not only does the *Bacillus acidilactici* play the most important part in the making of the cheese, but it is also the chief agent in the ripening process.

## THE PATIENT—THE DOCTOR—THE REMEDY.

THIS phrase, suitably illustrated with "figures," was the *motif* of an effective window-display, "compiled" last Christmas for Mr. Barge's Old Town Street establishment at Plymouth by Mr. E. Dangerfield, whose Birmingham windows we brought before chemists some twelve months ago.

A fashionable medico wearing gold pince-nez hands the emaciated patient (in a pink dressing-gown) a medicine-glass full of "Hill's quinine wine" (tr. aurantii).

A card is suspended from the patient's arm with the inscription:—

"These Figures are manufactured in our Laboratory from Drugs, Chemicals, and Surgical Appliances in every-day use, such as Shellac, Resin, Salprunella Balls, Tow, Bandages, &c."

On the left a saucy errand-boy with plaid comforter and facsimile medicine-basket was about to throw a snowball at an imaginary victim round the corner. This reprehensible youth formed the centre of a "dispensing group," which included mixtures, liniment, lotion, ointment, pills—indeed, the majority of pharmacopœial galenicals—all carefully got up and finished off in best style; a prescription with its accompanying envelope lay carelessly in the midst—this and all the labels bearing the name of a supposititious "Mrs. Brown."

Four comic sandwich-men carried boards advertising

various proprietary articles. These figures were novel to the "Three Towns," and the window was a great success and was besieged by compact crowds all day long. The errand-

boy was a special favourite with the juvenile spectators, and the "real live" errand-boy of the establishment had rather a trying time in consequence.

## AN AQUARIUM FOR THE PHARMACY.

IN the summer months especially, an aquarium with a fountain is an attractive object in a pharmacy. The following sketch and description of one which a correspondent fitted up two or three years ago may prove interesting.

This consisted of a large-size bell-glass aquarium, standing in a "Doulton" jar of dark-brown ware. A fountain played continually to a height of 18 or 20 inches from the water-level. To avoid splashing, a broad ring of plate-glass rested on the top of the aquarium through which the fountain played, the edge being made of cork-work, within which was a circular trough full of growing ferns. The aquarium was stocked with the usual golden carp, planorbis snails, vallisneria, &c., besides a number of loach, whose wistful faces and uncouth antics created great amusement. Ferns in pots flourished around the base, and as the whole thing was backed by a mirror, the effect was charmingly cool and fresh amidst the dust and sultry glare of an August afternoon. Sometimes an attractive show of filters replaced the ferns around the base.

The entrance and exit tubes of bent glass were practically invisible. The supply came through a small gas-pipe from a cistern at the top of the house, and was regulated by an ordinary tap at the back of the dispensing-counter.

About the same time we developed a taste for lizards, snakes, tree-frogs, and other "fearful wild fowl," which were exhibited in the pharmacy, with some show of reason, as Æsculapins has always been associated with the ophidian race even in the pharmaceutical "arms." Our two principal snakes were of goodly proportions, being fully 5 feet long, and were allowed to dispose themselves helically on a walking-stick in an empty aquarium. One was some kind of peaceable water-snake, the other a very fierce fellow with formidable fangs. The latter escaped one night, and all in

the house retired to rest with terror and misgivings;

the reptile was ultimately found in a cupboard, whence it was drawn by a thickly-gloved hand, notwithstanding

threatening attitudes and loud hisses. However, one Sunday morning a planorbis snail stopped the exit-pipe of the aquarium above; the water overflowed into the snakes' abode, and we found the water-snake quietly swimming on the surface, while the other lay drowned, with its mouth open, at the bottom. The lizards fought among themselves, and killed one another; the tree-frogs, after gazing inanely at nothing for some days, also perished; and our zoological collection was again reduced to the original "harmless necessary cat" of the establishment.

But the aquarium proper, with its fish and ferns, was always a pleasant thing to look upon, even in winter.

E. D.

## PHARMACEUTICAL APPARATUS.

### POWDER-DIVIDERS.

IN England the powder-divider is practically unknown. The eye is the aid to most dispensers, the prescription-scales that of the accurate man, and we seem to get along

satisfactorily. In American pharmacies, however, powder-dividers are very commonly used, and if they were better known in this country they would be found as convenient as pill-machines are. The wine-glass-like arrangement (fig. 1) is the invention of Mr. J. C. Michael, a New York pharmacist. The powder is placed in the receiver and shaken level; then the divider is inserted and the cover put on. There is a wedge-shaped opening in the cover with a sliding protector. On turning up the divider and moving the slide the powder in one of the divisions drops out. This process goes on until the divider is emptied.

It will be seen from this that the cover forms a receptacle for the divided powders. Another form (fig. 2)

FIG. 1.

FIG. 2.

is made by Fox, Futzl & Webster, of New York and Boston, and was described in a recent issue of the *Pharmaceutical Record*. The trough is 9 inches long, 1 inch wide, and  $\frac{3}{4}$  inch deep, closed at one end. The powder is placed in the trough, and a rubber plug placed opposite the graduation

FIG. 3.

denoting the number of powders the prescription is to be divided into. The powder is then levelled in the trough by the use of the leveller (fig. 3), after which the plug is removed and the powder divided and removed through the open end of the trough by use of the spatula (fig. 4) in connection with the graduation-marks. The third form of divider was originally described in the *Western Druggist*. It is made by Mr. W. J. Hull, and consists of a trough (fig. 5, 1), within which are fitted a subdivider (2), an indicator (3), and the marker (4). The

divider is shown in fig. 6. There is an opening at the side of the trough for withdrawing a divisional part of the powder. The apparatus is worked by closing the opening, placing the powder into it, if for twenty-four,

FIG. 5.

then the divider. The marker catches the toothed edge of the divider cover so that when the opening is again freed and 4 drawn back a portion of the powder is brought

FIG. 6.

round to the opening and ejected. This goes on until the whole twenty-four portions are collected on powder-papers. The indicator 3 is used when less than twenty-four powders are wanted, the wedge x at the same time being put in. In the figure the trough is shown divided for fifteen powders. The working in this case can be readily understood.

## OLEUM LINI SULPHURATUM, OR THIOLINIC ACID

ACCORDING to the *Apotheker-Zeitung* this preparation has been patented in Germany by Dr. F. Kobbe, of Leipzig, and the specification shows it to be made by heating 6 parts of linseed oil with 1 part of flowers of sulphur at about 230° C., with constant stirring, until the mixture froths strongly. Then it is allowed to cool, and 1 part of sulphurated oil—the old balsam of sulphur, it will be noted—is heated on a water-bath (80°–100° C.) with 2 parts of sulphuric acid, s.g. 1.840. An evolution of SO<sub>2</sub> ensues, and the mixture becomes a homogeneous solution. It is freed from excess of sulphuric acid by washing with water, is filtered through cloth, and dried by a gentle warmth.

The product is thiolinic acid. It is a brittle solid in the cold, becoming soft between 60° and 75° C. The colour of the acid is greenish-brown, and it contains 14.2 per cent. of sulphur. It is insoluble in water, but combines with caustic and carbonated alkalies, and sodium chloride precipitates the salts from solution. One part of the acid requires 0.123 part of caustic potash for neutralisation. From either of these alkaline solutions salts of the alkaline earths and metallic salts, such as zinc sulphate and lead nitrate, throw down corresponding metallic thiolinates. It would appear that salts of thiolinic acid part with their sulphur somewhat freely, and it is to this characteristic that their use in therapeutics will depend.

FULLER'S EARTH is found in the vicinity of Reigate, Dorking, and Leith Hill. It is extracted in the form of a very soft stone, which crumbles at the touch, and it has to go through a process of manufacture before it is fit for sale. Last year the quantity extracted was 4,500 tons, and its value was estimated at 10,500/.

## Leaves from a Recipe-Book.

NCE more we open the recipe-book which we have recently used to so good purpose, and on this occasion we select those formulæ which pertain to the toilet. The first one that we meet is a formula for quinine dentifrice which was formerly in the possession of a West-end of London chemist, who died forty-two years ago. The dentifrice was a favourite one with the Queen and the late Prince Consort; and it has an association with Lord Byron, in so far as his

daughter Ada, Countess of Lovelace, was in the habit of buying it half-a-dozen boxes at a time, "calling at the establishment where it was made in her carriage," says our chronicler. A fashionable dentist of a generation ago thought so much of the dentifrice that he had it put up in No. 14 turned wood boxes, and labelled with his own name, and there are many other honourable associations in connection with it. "Super," "Opt.," and "Verum," are added to one or other of all the ingredients in the original recipe, but we prefer to give it on the understanding that only the best materials are to be used.

## Quinine Dentifrice.

[As used by Her Majesty the Queen.]

|                                         |        |
|-----------------------------------------|--------|
| Pulv. rad. iridis flor. . . . .         | 3xij.  |
| „ cretæ præcipitat. . . . .             | 3xxv.  |
| „ oss. sepie . . . . .                  | 3ij.   |
| Ol. rosæ virgin. . . . .                | ℥lxxx. |
| Quinina sulphatis . . . . .             | 3ij.   |
| Pulv. saponis hispan. (fresh) . . . . . | 3ij.   |
| Ol. cinnamomi . . . . .                 | ℥lxxv. |

All the powders to be finely levigated and mixed in the above order, the oils being intimately mixed before passing the powder through a fine sieve three times.

The powder may be coloured with carmine, but it is much nicer uncoloured. To sell as a special dentifrice, at 1s. 6d. per box, or 2s. 6d. per 2-oz. globe-stoppered bottle.

## Rhatany Dentifrice.

|                              |            |
|------------------------------|------------|
| Pulv. iridis flor. . . . .   | 3vj.       |
| „ oss. sepie . . . . .       | 3vj.       |
| „ cretæ præcip. . . . .      | 3xxiv.     |
| „ krameria . . . . .         | 3ix.       |
| Carmin. . . . .              | 3iss.      |
| Boracis . . . . .            | 3ij.       |
| Pulv. antimonialis . . . . . | 3vj.       |
| Ol. rosæ virgin. . . . .     | gtt. xxiv. |
| „ neroli . . . . .           | gtt. xvj.  |
| „ cedrat. . . . .            | gtt. viij. |
| „ cinnamom. . . . .          | gtt. viij. |
| „ caryoph. . . . .           | gtt. viij. |
| „ lavand. ang. . . . .       | gtt. iv.   |
| „ pimentæ . . . . .          | gtt. iv.   |
| Tinct. myrrhæ . . . . .      | 5vj.       |
| Extrait violæ . . . . .      | 5vj.       |
| Magnes. carb. pond. . . . .  | 3vj.       |

Mix well, and pass through a fine drum sieve twenty times.

This is a superior preparation, which has been retailed at 6d. per oz.; so also has the following:—

## Aromatic Dentifrice.

|                                    |         |
|------------------------------------|---------|
| Magnes. caroon. pond. . . . .      | 3vij.   |
| Cretæ præcip. . . . .              | 3xxiv.  |
| Pulv. iridis flor. . . . .         | 3iv.    |
| „ sapon. hispan. (fresh) . . . . . | 3iv.    |
| Carmin. . . . .                    | gr. xx. |
| Ol. caryoph. ang. . . . .          | 3ij.    |
| „ cinnam. ver. . . . .             | 3j.     |
| „ origani pallid. . . . .          | ℥l.     |
| „ rosæ geranii . . . . .           | 3j.     |
| „ rosæ virgin. . . . .             | 3j.     |
| Ess. moschi . . . . .              | 3j.     |

Mix well, and pass through a fine drum sieve several times.

## French Dentifrice.

|                           |        |
|---------------------------|--------|
| Pulv. camphoræ . . . . .  | 3xvj.  |
| Cretæ præcipitat. . . . . | lb. v. |
| Carmin. . . . .           | 3iss.  |
| Ol. rosæ virgin. . . . .  | 3ij.   |

M.

This should be passed through a fine drum sieve after being thoroughly mixed. To bring out the beautiful colour the dentifrice should be passed through the sieve twenty times. It is an elegant preparation properly prepared.

## Antiseptic Dentifrice.

|                                    |      |
|------------------------------------|------|
| Pulv. rad. irid. flor. . . . .     | 3ij. |
| „ glycyrrh. decort. . . . .        | 3ij. |
| „ sapon. hispan. (fresh) . . . . . | 3vj. |
| Cretæ præcipitat. . . . .          | 3j.  |
| Acid. boracic. . . . .             | 3ij. |
| Acid. benzoic. . . . .             | 3j.  |
| Magnes. carb. pond. ad . . . . .   | 3iv. |
| Ol. eucalypti . . . . .            | ℥xx. |
| „ rosæ virgin. . . . .             | ℥v.  |
| „ menth. pip. ang. . . . .         | ℥v.  |
| „ limonis . . . . .                | ℥x.  |

Mix in the order written, and pass through a fine drum sieve. If desired coloured, add 20 grains of carmine, which gives an elegant tint.

## Dental Tincture of Myrrh.

|                             |             |
|-----------------------------|-------------|
| Macis contus. . . . .       | gr. l.      |
| Myrrh. opt. cont. . . . .   | 3iv. gr. x. |
| Rad. krameria cont. . . . . | 3iv. gr. x. |
| Glycerini . . . . .         | 3s.         |
| Sp. vin. rect. . . . .      | 3xij.       |

Macerate for fourteen days, shaking every day or every second day once during the day, then filter.

Retail 2 oz., flat-shape best quality white glass bottle, 1s.

Directions: Half a teaspoonful in a wineglassful of water (tepid in winter) will be found a most effectual astringent wash for the teeth and gums. It should be used every night and in the morning.

## Tincture of Myrrh and Borax.

|                               |       |
|-------------------------------|-------|
| Myrrh. elect. cont. . . . .   | 3j.   |
| Tinct. krameria . . . . .     | 4x.   |
| Sodæ biborat. . . . .         | 3iss. |
| Glycerine [Price's] . . . . . | 3ss.  |
| Eau de Cologne . . . . .      | 3x.   |

Macerate fourteen days, and filter.

A most elegant and fragrant preparation, suitable for first-class business, and very brilliant in appearance.

## Vegetable Hair-wash.

|                             |          |
|-----------------------------|----------|
| Tinct. caubaridis . . . . . | 3j.      |
| Spt. rosmarin. . . . .      | 3j.      |
| Ol. amygdal. dulc. . . . .  | 3iv.     |
| „ lavand. ang. . . . .      | ℥x.      |
| „ bergamot. . . . .         | ℥xx.     |
| „ rosæ virgin. . . . .      | gtt. iv. |

M.

To be applied every other morning, well shaking the bottle before use. Retail price, 6-oz. bottle, 2s.

## Nursery Hair-lotion.

|                                       |      |
|---------------------------------------|------|
| Cort. quillaia cont. . . . .          | 3ss. |
| Lig. quassia . . . . .                | 3j.  |
| Chirata . . . . .                     | 3ij. |
| Aque bullientis . . . . .             | Oij. |
| Infuse for one hour, strain, and add— |      |
| Sodæ salicylat. . . . .               | 3j.  |
| Tinct. lavand. co. . . . .            | 3j.  |

The lotion may be set aside for four days then filtered and bottled. Four-ounce bottles have been sold at 7d.; 8-oz., 1s. It is a good lotion.

Directions: After combing the hair thoroughly, apply the lotion to the roots with a sponge, sprinkle some upon the hair-brush and well brush the hair in order to distribute the lotion equally.

#### Lime-juice and Glycerine.

|                             |          |
|-----------------------------|----------|
| Olei nucis .. .. .          | Oiv.     |
| Aquæ calcis .. .. .         | Oij.     |
| Liquor. calcis sacch. . . . | 3iv.     |
| Ol. limonis .. .. .         | 3ss.     |
| „ hergamot. .. .. .         | 3j.      |
| „ neroli .. .. .            | gtt. vj. |
| „ cinnamomi .. .. .         | gtt. vj. |

In making it add the liquor. calcis sacch. to the aqua calcis, then add both to the oil, shaking vigorously in a bottle capable of holding nearly double the quantity. Let it stand for a few days, and if any oil float on the surface, add a little more liquor. calcis sacch. When finished, add the essential oils, and let stand a week with frequent agitation.

#### Transparent Castor-oil Pomade.

|                          |      |
|--------------------------|------|
| Cetacei .. .. .          | 3ij. |
| Ol. ricini ital. .. .. . | 3v.  |

Melt, and add gradually with constant stirring—

|                        |     |
|------------------------|-----|
| Sp. vin. rect. .. .. . | 3v. |
|------------------------|-----|

Then add—

|                        |       |
|------------------------|-------|
| Ol. bergamot. .. .. .  | ℥xxx. |
| „ neroli .. .. .       | ℥ij.  |
| „ caryoph. .. .. .     | ℥iv.  |
| „ verbenæ .. .. .      | ℥iv.  |
| „ rosæ virgin. .. .. . | ℥iv.  |

Mix, and fill into bottle previously warmed.

Has usually been sent out in Maw's 3-oz. glass pomade-jars. It is a very elegant preparation.

#### Crystallised Cream for the Hair.

|                          |            |
|--------------------------|------------|
| Ol. ricini .. .. .       | 3vñj.      |
| „ amygdal. dulc. .. .. . | 3vij.      |
| Cetacei .. .. .          | 3ij.       |
| Ol. hergamot. .. .. .    | 3ij.       |
| „ lavand. ang. .. .. .   | 3is.       |
| Extrait jasmii. . . . .  | gtt. viij. |
| „ violæ .. .. .          | gtt. viij. |
| Ol. rosæ virgin. .. .. . | gtt. viij. |

Melt the spermaceti and add the fixed oils, warming gently only. Add the perfumes. Place the bottles for the pomade in a shallow dish containing hot water, and pour the melted pomade into them. Leave undisturbed until the pomade is solid.

To colour yellow add 2 oz. of palm oil, and pink with a little alkanet-root.

#### Camphor Ball.

|                        |      |
|------------------------|------|
| Cere albæ .. .. .      | 3iv. |
| Cetacei .. .. .        | 3ij. |
| Ol. ricini .. .. .     | 3vj. |
| Pulv. camphoræ .. .. . | 3j.  |
| Glycerini .. .. .      | 3iv. |
| Ol. pimentæ .. .. .    | 3j.  |

Melt the wax and spermaceti on a water-bath, add the castor oil, then the camphor. Pour into a warm (but not hot) mortar, beat in in the glycerine until smooth, and add the essential oil.

#### SOME HOUSEHOLD REQUISITES.

##### Concentrated Essence of Ginger.

|                                     |                 |
|-------------------------------------|-----------------|
| Rad. zingib. jam. cont. . . .       | 45 oz. (avoir.) |
| Sp. vin. rect. (58-per-cent.) . . . | 140 oz.         |
| Sacch. alh. .. .. .                 | 2½ lbs.         |
| Sem. cardam. min. contus. . . .     | 3ij. 3ij.       |

Macerate one month and filter.

##### Cochineal Colouring.

|                                    |                 |
|------------------------------------|-----------------|
| Carmin. .. .. .                    | 3j.             |
| Liquor. ammon. fortis., 880° . . . | 3vj.            |
| Sp. vin. rect. .. .. .             | 3iv.            |
| Sacch. alh. (in lumps) .. .. .     | 3 lbs. (avoir.) |
| Aqua destill. ad .. .. .           | 80 fl. oz.      |

Rub the carmine down with the ammonia, make the sugar into a syrup with 2 pints of water, and when cold add to the carmine solution; then add spirit, and make up to 80 fl. oz. with aqua destill. Strain through fine muslin.

#### The Celebrated Newmarket Sauce.

|                                     |                              |
|-------------------------------------|------------------------------|
| Shallots .. .. .                    | 40 oz.                       |
| Cloves .. .. .                      | 3 „                          |
| Celery-seed .. .. .                 | 2 „                          |
| Mace .. .. .                        | 1 „                          |
| Capsicum .. .. .                    | 1 „                          |
| Walnut-ketchup .. .. .              | 2 quarts                     |
| Mushroom-ketchup .. .. .            | 2 „                          |
| India soy .. .. .                   | 3 „                          |
| Acid. acet. fort. (Beaufoy's) .. .. | 1 gallon                     |
| Water .. .. .                       | 6 gallons (imperial measure) |
| Salt .. .. .                        | 2 lbs.                       |

Peel and slice the shallots, bruise the capsicum, cloves, celery-seed, and mace, and pour on the other ingredients.

#### Furniture-paste.

|                                |       |
|--------------------------------|-------|
| Cere flav. (in shreds) .. .. . | 3vij. |
| Ol. terebinth. .. .. .         | 3xx.  |
| Ol. lini .. .. .               | 3ij.  |
| Rad. anchusæ .. .. .           | 3iss. |

Digest the alkanet in the mixed oils, strain, melt the wax on a water-bath, and add the oils to it, constantly stirring.

#### Neatsfoot Oil (Imitation).

|                   |           |
|-------------------|-----------|
| Colza oil .. .. . | 2 gallons |
| Lard .. .. .      | 3 lbs.    |

The lard to be melted and well stirred in the oil.

## Medical Gleanings.

#### ANODYNE SINAPISMS.

DR. B. W. RICHARDSON, in the *Asclepiad*, says mustard can be used advantageously as the menstruum for anodynes in the form of external application, and without destroying its value as a counter-irritant. The mode of application consists in mixing the mustard into a thick solution either with olive oil or with glycerine, and then incorporating the anodyne, opium, tincture of aconite, cocaine, belladonna, or other narcotic. The vascularity caused by the mustard favours absorption, and an insensibility amounting to a slight local anæsthesia can be induced by this simple method.

#### TOOTH CULTURE.

IN an address delivered at the annual meeting of the Eastern Counties Branch of the British Dental Association, Sir James Crichton-Browne referred to a change which has taken place in bread as one of the causes of the increase of dental caries. So far as our own country is concerned, this is essentially an age of white bread and fine flour, and it is an age, therefore, in which we are no longer partaking to anything like the same amount that our ancestors did, of the bran or husky parts of wheat, and so are deprived to a large degree of a chemical element which they contain—namely, fluorine. The late Dr. George Wilson showed that fluorine is more widely distributed in nature than was before his time supposed; but still, as he pointed out, it is but sparingly present where it does occur, and the only channels by which it can apparently find its way into the animal economy are through the siliceous stems of grasses and the outer husks of grain, in which it exists in comparative abundance. Analysis has proved that the enamel of the teeth contains more fluorine, in the form of fluoride of calcium, than any other part of the body, and fluorine might, indeed, be regarded as the characteristic chemical constituent of this structure, the hardest of all animal tissue, and containing 95.5 per cent. of salts, against 72 per cent. in the dentine. As this is so, it is clear that a supply of fluorine while the development of the teeth is proceeding is essential to the proper formation of the enamel, and that any deficiency in this respect must result in thin and inferior enamel. Sir James Crichton-Browne thinks it well worthy of consideration whether the reintroduction into our diet of a supply of fluorine in some suitable natural form, such as exists in the pellicles of our grain-stuffs, might not do something to fortify the teeth of the next generation.

## THE MEDICAL STAFF CORPS OF THE ARMY.

BY ONE WHO HAS SERVED.

THE Editor of this journal has suggested that a few remarks on the prospects and advisability of young druggists donning Her Majesty's uniform, based on experience, may be acceptable. I propose, therefore, to give in

this paper a brief account of what a young fellow may expect by adopting a career in that non-combatant but important branch of the service known as the Medical Staff Corps.

Having met the recruiting-sergeant, been medically examined, and, if fit, duly attested, the youthful aspirant to "medico-martial" honours, shortly finds himself safely landed at South Camp, Aldershot, where in V and Z lines are situated the depot and training-school of the corps he has joined.

During the first week he will be served with his clothing, accoutrements, and free kit, and posted to one of two companies, the depot being thus divided for disciplinary and economical purposes; and the first month is spent in mastering

the intricate mysteries of the goose-step, squad and company drill, and the various "regulation" methods of appearing in uniform, with or without equipment, on or off duty, and other details of the routine of a soldier's life, precisely similar to a lad joining a line battalion. Having become a little accustomed to military *régime*, a class of forty or fifty recruits is formed, which for about two months undergoes a thorough and systematic training, under a surgeon, in physiological outlines, bandaging, hospital-ward duties, stretcher exercise, and allied work, as laid down in the Medical Regulations, Part II.

[Mem.—I strongly recommend anyone about to join the corps to procure this manual, price 1s. 6d., from any Government publishers.]

Surmising that our young "chemicus" has passed class successfully—the examination being of the simplest character, and entirely oral—we shall next find him posted for duty to some station-hospital, or, perhaps, a general one—e.g., Netley and Woolwich—and mostly employed in the capacity of ward orderly, gaining knowledge daily in the application of dressings, symptoms of diseases, and observation and nursing of the sick generally.

But now comes the bitter pill. According to the rate of promotion in the corps (about 2,400 strong, of whom 700 odd are warrant and non-commissioned officers) during the last few years, it takes fully five years to become lance-corporal—the first step in non-commissioned rank. Thus, a man joining for three years with the colours and nine years in the reserve cannot possibly obtain promotion unless he extend his colour-service to seven years, which, provided he is of good character and suitable for the corps, he is always encouraged to do.

But still, as a private, he can receive advancement in grade as orderly with corresponding increase of pay—conditionally, of course, on good conduct, smartness, and aptitude for ward-work; and reverting again to our ideal young

soldier, we find him after three or four months' good ward-work, appointed second-class orderly, and wearing one worsted bar on right arm, his pay 9s. a week *clear*, and probably employed for a while on staff duties, as issuer in the steward's store, surgeryman to the compounder or clerk in the senior medical officer's office, in all of which capacities he will gain knowledge absolutely essential to him, when he in turn becomes a non-commissioned officer—the clerical knowledge, in particular, being only acquired by constant practice in compiling the many various returns, the modes of official correspondence, and close acquaintance with the never-ending regulations connected therewith.

Supposing, again, our man has resolved to extend his service to seven years with the colours, having completed his original three years, and obtained a second-class school-certificate (dictation, arithmetic, and army accounts), or a first, perhaps (dictation, arithmetic, geography, English history, and copying manuscript), he will now obtain permission to sit for his corporal's examination (written), which comprises knowledge of duties of a Medical Staff Corps non-commissioned officer in the various employments of ward-master, pack-storekeeper, steward, and compounder; anatomical and physiological outlines, names and uses of surgical instruments and appliances for fractures and dislocations, modes of arresting hæmorrhage, restoration of the apparently drowned, nursing of helpless patients, observations of the sick, and ward-management generally; and for active service the theory and practice of rendering aid to the wounded in battle, and the best means of transporting them, as embodied in stretcher-drill.

I have dwelt at some length on the early part of the private's career in the Medical Staff Corps advisedly—firstly, on account of its exceedingly trying nature; and, secondly, because there are so many things to be learnt before the private can emerge into an efficient non-commissioned officer.

Our friend, having successfully passed his corporal's examination, must gird up his loins and prepare for the compounder's ordeal, for which he is allowed to sit after six months' attendance in a military surgery, and favourable report by the surgeon and compounder instructing him.

The examining board is usually composed of one surgeon-major and two surgeon-captains, and it is upon the opinion and recommendation of this board that the Director-General of the Medical Staff grants the certificate of compounder of medicines.

The chief subjects are:—

- (i.) Composition, mode of preparing, and doses of all B.P. preparations.
- (ii.) Poisons: symptoms, antidotes, &c.
- (iii.) Practical dispensing: preservation of drugs, and their tests by odour, colour, form, &c.
- (iv.) Rendering of all documents connected with supplies, demands, and transfers of medicines, instruments, and surgical materials.

Our friend having been successful, can now rest on his oars, as no more examinations are necessary until he qualifies for warrant officer—a rank, owing to the present stagnation of promotion, he most probably will not attain within twenty-one years, unless the corps is increased, or the "Great War of 1892" happen elsewhere than in the pages of *Black and White*.

With six years' service completed, we find our friend full corporal, performing the duties of compounder, and held personally responsible for all drugs, &c., in his charge, with an orderly under him for cleaning up, &c., and his time 9 A.M. to about 1 P.M. occupied in dispensing and attending to the wants of the medical officers; and the afternoon—say, from 2 till 4—employed in attending to out-patients, married people, &c.; his daily pay 2s. 10½d. *clear*. And in his surgery we will leave him.

Before concluding this sketch, I may as well summarise some of the advantages and disadvantages most likely to accrue to a young druggist by becoming an army compounder, and I also append a table showing the pay in the Medical Staff Corps:—

*Advantages.*

1. Permanence, and after twenty-one years a pension.
2. Comparatively short hours, and more time for recreation.
3. Opportunities for foreign service.

*Disadvantages.*

1. Loss of touch with current trade affairs.
2. Limited supply of drugs, entailing less experience.
3. Excessively slow promotion.

| Rank    |                   | Full Daily Pay | Weekly Pay After Paying Messing and Washing | Time Taken to Attain the Rank |
|---------|-------------------|----------------|---------------------------------------------|-------------------------------|
| Private | 3rd class orderly | .. 1 6         | 7 10 $\frac{1}{2}$                          | On joining<br>About 6 months  |
|         | 2nd " "           | .. 1 8         | 9 0 $\frac{1}{2}$                           |                               |
|         | 1st " "           | .. 1 10        | 10 2 $\frac{1}{2}$                          |                               |
|         | Lance-corporal    | .. 2 2 (b)     | 12 6 $\frac{1}{2}$                          |                               |
| (c)     | Corporal          | .. 2 9         | 16 7 $\frac{1}{2}$                          | " 5 years                     |
|         | Lance-sergeant    | .. 3 4         | " "                                         | " 10 "                        |
|         | Sergeant          | .. 3 8         | (d)                                         | " 10 $\frac{1}{2}$ "          |

Staff-sergeants, 4s. 3d. and 4s. 6d.; warrant officers, 5s. 6d. per diem.

(a) 8d. per diem extra if a lunatic attendant, or over infectious diseases.

(b) Including one good-conduct-badge pay.

(c) 6d. per diem extra if employed as compounder.

(d) Less stoppages for sergeants' mess.

The young man who heads this article is a second-class orderly in service uniform. The tunic is a dark-blue cloth with red facings. When not in service in the harracks or camp he may wear an easy-fitting patrol jacket, but if going out into the town he must wear his tunic with a white belt and a round dark-blue cap with red band. The red cross on his arm in a white circle with yellow border is the distinguishing mark of the corps.

## A REMARKABLE FRUIT.

By JOHN R. JACKSON, Curator of the Museums, Kew.

IT has been often remarked that a Chinese druggist's shop contains some of the most extraordinary products imaginable, some of which have yet, perhaps, to be developed in European pharmacy. One of the most remarkable among fruits is perhaps that of *Sterculia scaphigera*, a plant growing in China and Siam. It was first brought to notice so long back as 1861 by Daniel Hanbury, who published a notice of it in that year in the *Pharmaceutical Journal*,

STERCULIA SCAPHIGERA.

1. Fruit ( $\frac{1}{2}$  nat. size). 2. Seed. 3. Section of seed. The fruit in jar shows the proportion to which it swells in water—viz., from the size of 1.

since which time no further notice has been taken of it, except that in the Siamese collection of edible products shown in the Health Exhibition in 1884 the fruits were shown, and quite recently some fruits have been received at the Royal Gardens, Kew.

The plant producing this fruit is known by the somewhat barbarous name of "Boa-tam-paijang," and in Bangkok as "Bungtalai." It is described as a lofty tree, with coriaceous leaves 12 to 14 inches long and 6 inches wide. The flowers are in panicles, and are succeeded by wing-like follicles 6 to 8 inches long by 3 to 4 inches wide. These contain the fruits, which are from  $\frac{3}{4}$  inch to 1 $\frac{1}{4}$  inch long and  $\frac{1}{2}$  inch wide, ovoid, usually somewhat elongated at the lower extremity, which is terminated by a large opaque scar—the point of attachment to the follicle, which is membranous, somewhat boat-shaped, and inflated. The fruits are of a dark-brown colour and wrinkled on the outside. If one of these fruits is placed in water, in the course of an hour or two it swells to an enormous bulk, forming a gelatinous mass, which, after being sweetened, is eaten by the people as a delicacy. These fruits were introduced about 1840 into one of the Paris hospitals as a certain specific in diarrhoea and dysentery, but they gave no satisfactory results besides that of an ordinary demulcent; nevertheless, in 1854 they were quoted in the wholesale price-list of Messrs. Menier & Co., of Paris, at 3l. 13s. per lb.

Though the gelatinous property of the seed is remarkable, there seems to be no reason to suppose that they will ever become of any recognised use in this country. They were analysed by Professor Guibourt, who gave the following results:—

*In the Pericarp.*

|                           |         |       |
|---------------------------|---------|-------|
| Green oil                 | .. .. . | 1·06  |
| Bassorine                 | .. .. . | 59·04 |
| Brown astringent matter   | .. .. . | 1·06  |
| Mucilage                  | .. .. . | 3·20  |
| Woody fibre and epidermis | .. .. . |       |

*In the Nucleus.*

|                           |         |       |
|---------------------------|---------|-------|
| Fatty matter              | .. .. . | 2·98  |
| Saline and bitter extract | .. .. . | 0·21  |
| Starch                    | .. .. . | 31·91 |
| Cellular tissue           | .. .. . |       |

100·00

Sir Robert Schomburgk, sometime British Consul at Bangkok, reported that from the trees growing by the roadsides the fruits often drop to the ground in such quantities that, when they become wetted with rain, such a thick mass of glutinous jelly is formed as to render the passage of the road on foot or horseback a matter of difficulty.

ACETOGEN.—An analysis (*Phar. Zeit.* 429) of the substance going by this name on the Continent shows that it is composed of 21 per cent. of calcium phosphate, 45 per cent. of disodiumphosphate, and 40 per cent. of ammonium phosphate.

A RISK OF ELEGANT PHARMACY.—A pharmacist at Aniche, near Douai (one of the busy French Northern towns), recently received a visit from a schoolboy of tender age, who, offering a few pence, demanded "some of those red sweets you sold my schoolfellow." The varieties of "tuck" indulged in by young France are numerous, and our pharmacist made further inquiries. With schoolboy frankness, an explanation was at once given. Rushing to one of his cupboards, where a hottle of arsenic pills should have been, the chemist confirmed his horrible suspicions. The little fellow's comrade had evidently entered the pharmacy just at the moment when, after serving a few arsenic pills to a lady customer, the proprietor had occasion to quit the shop for a few moments. Making straight for the cupboard where he had observed the hottle was replaced, the lad had possessed himself of the brightly-coloured sweetmeats (as he supposed) which had aroused his cupidity, and promptly pocketed them. Once free from scholastic duties, he distributed them to his youthful friends, of whom this was one. The pharmacist acted with equal promptitude, and straightway obtained the names of those who had accepted the deadly "goodies." The powerful emetics which they got will probably make them hesitate before again accepting their young friend's offerings.

# EDINBURGH.

VISITED BY THE  
BRITISH PHARMACEUTICAL CONFERENCE, 1871.  
RETURN VISIT, AUGUST, 1892.

*"Thy sons Edina, social, kind,  
With open arms the stranger hail."*

THE SCOTT MONUMENT.

“**T**HE Edinburgh Learned of that period were in general more noted for clearness of head than for warmth of heart: with the exception of the good old Blacklock, scarcely one among them seems to have looked at Burns with any true sympathy, or indeed much otherwise than as at a highly curious *thing*.” So Carlyle thought, and said in one of the most brilliant of his essays. Yet Burns's recollections of the city, his memories of hospitality to a farm hind, and his gratitude for its elevating influence, served to prompt the “address” from which we quote—not the happiest of his poems, but honest in expression:—

Here Justice, from her native skies,  
High wields her balance and her rod;  
There Learning, with his eagle eyes,  
Seeks Science in her coy abode.

A century has passed since Burns was a “stranger” in “Scotia's darling Seat,” and it remains much

NELSON'S MONUMENT, CALTON HILL.

what it was in his day. The New Town has developed to the plan which Craig laid out for it; Princes Street has become one of the finest thoroughfares in Europe; the Nor' Loch by its side has given place to delightful Gardens; “palaces and towers” have been reared which Burns did not dream of; but the city remains the pride of Scotland—a centre of Education, Justice, and Learning such as history shows few parallels of.

“Our staple industry is education,” said a Lord Provost of Edinburgh not many years ago, and that expression is the finger-post to the pharmaceutical strangers who will visit it next month. It is “no mean city” which they will see. In topography unique in these climes, for, like Rome, it is a town scattered over and among a range of eminences, and it is rich in historic interest and architectural grandeur; but the living fact which pharmacists will not less appreciate is that it is steeped in learning and that its wealth arises from the propagation of knowledge. Its schools for elementary and secondary education alone entitle Edinburgh to prominence in this respect, but it is the fame of the University and Medical School which has drawn students to the city from all parts of the world. It scarcely needs to be said that the Medical School has more than any other in the universe influenced the art of healing for upwards of a century, and that influence is at the present moment as great as it has been since Monro *primus* entered the chair of anatomy in 1720. One cannot imagine that an influence whose beneficence has been so widely felt should not have left its mark nearer the source, and we have an expression of it in the honourable associations of medicine and pharmacy in the city, and the easy gradation by which many of the followers of the latter calling have ascended to higher branches of medical and physical science.

The Medical School has made astonishing progress within the past twenty years. Strictly speaking, the medical department of the University is not the Edinburgh Medical School, for it comprises the University, the extra-mural schools, the Royal Colleges of Physicians and Surgeons, medical societies, the Royal Infirmary, and all similar institutions wherein are persons recognised by the University as teachers. To this catholic principle is unquestionably due much of its success. It favours freshness, stimulates progress, and provides a means for educational experience which cannot obtain in the four walls of a university alone.

## PROGRESS OF EDINBURGH PHARMACY.

In many respects pharmacy has also progressed during the same period. In the matter of the Conference, for example, the Local Committee of 1871 consisted of twenty-three persons; the committee of this year numbers 218, half of whom Edinburgh alone provides, the remainder hailing from towns in the neighbouring counties. We have happy recollections of the warmth of Edinburgh hospitality in 1871. Then there was one of the most brilliant *conversazioni* which British pharmacy can boast of, the late Emperor of Brazil being one of the guests, and other titled persons giving a tone to the affair which is not usual at druggists' meetings. There were feastings and tourings on conditions such as the principles of the Conference will not permit nowadays. There was no lack of solid pharmacy, either, for the genial President, Mr. W. W. Stoddart, to direct. John Mackay was at the wheel as Local Secretary; he had admirable lieutenants, and they made the eighth meeting of the Conference a record which will take some beating.

In Scotland, at least, Edinburgh pharmacy has always held high rank, and to acquire experience in one or other of the pharmacies in the centre of the city is one of the desires of the ambitious. But, unlike the similar ambition amongst English assistants to have a period of service in a London house, tradition has little to do with the Scotch motive. The Scotch capital, like the English, offers splendid educational opportunities, and these, with the prospect of variety in dispensing practice, are the sole attractions to the provincial assistant. On the fingers of one hand we may count the pharmacies which are reckoned the most attractive in this direction, although there are at least a score more wherein it is known excellent experience and training are obtainable. Few pharmaceutical visitors to Edinburgh can help having the same curiosity as Scotch assistants regarding the pharmacies which are historic, or which are notable in some special direction, for the fact cannot be overlooked that with the retail pharmacy of the city the introduction and manufacture of anæsthetics and narcotics are honourably associated. Perhaps the fact that medical men were at the head of the three leading firms had something to do with this. At any rate, it is interesting to note that Baillie J. F. Macfarlan was a licentiate of the Royal College of Surgeons. So was Mr. William Flockhart, and Mr. Thomas

Smith, happily still alive, has his name on the Medical Register as well as on the Register of Pharmaceutical Chemists.

#### DUNCAN-FLOCKHART'S.

The headquarters of Messrs. Duncan, Flockhart & Co. are at 52 North Bridge, close to the General Post Office. There it was that John Duncan commenced in 1811; many years after a branch was opened at 117 Princes Street (which is now the more important retail business), and some fifteen years ago the firm launched boldly out into the wholesale trade with works and warehouse in the Canongate quarter. The Leith business, Duncan, Flockhart & Powell, is no longer directly connected with the Edinburgh firm. The Duncan-Flockhart influence has been very widely felt in Scotch pharmacy. While the firm has unquestionably the largest dispensing and retail business, there have gone out from its pharmacies a large number of young druggists who also perpetuate the old name by the liberal use of it on their labels and signs. When this century dawned, Mr. Duncan was in business in Perth, along with the late Mr. James Hamilton and Mr. Dandie. These were three exceptional men, and it was according to the nature of things that the fair city should become too small to hold the three of them. Mr. Dandie remained to continue the business as Dandie, Newby & Dandie; Mr. James Hamilton went to Dundee and built up a prosperous business, which is now represented in Messrs. James Hardie & Son (Mr. Hardie, sen., having been a partner with Mr. Hamilton before the death of the latter); and Mr. Duncan went to Edinburgh. He had been nearly a dozen years there when young Flockhart came from Kinross-shire to be an apprentice with him, and in course of time the apprentice became a partner. The proximity of the shop to the University and the friendly relations of the firm with doctors, especially with Sir James Y. Simpson, bulk largely amongst the factors which determined its success. It says not a little for the shrewdness and ability of the partners that as time went on they kept pace with the fertility of Simpson's brain. Chloroform was, of course, the biggest thing, but the great ladies' doctor was one of the keenest for new remedies, and these, with the chloroform, were produced in the Duncan-Flockhart laboratory below the street, which, by the way, is laid upon a series of arches. It thus happened that long before Duncan, Flockhart & Co. ranked as a wholesale house all the principal druggists in Scotland ran an account with them; there was the place to get the new things, particularly the syrups and liquors of Simpson's prescriptions. It was the custom then for provincial druggists who had business relations with the firm to visit Edinburgh once or twice a year in order to square accounts. The business grew apace, and when the original partners died, in 1871, it seemed to have reached its zenith; but fresh blood has carried on the work to even greater things, and now there is no attempt to live on past reputation. Amongst those who have been connected with it as partners were Mr. William Tait and Mr. John Simpson (nephew of the professor). At present the firm consists of six individuals—Mr. James Buchanan, the senior partner, who, with Mr. J. Laidlaw Ewing, manages the North Bridge pharmacy; Mr. James Heron and Mr. Alexander Noble, who are the principals in the West-end branch; and Mr. Robert Dick and Dr. Inglis Clark, who work the wholesale business in South Canongate. The premises in the Canongate are within a stone's throw of Holyrood, and are amongst the largest and finest-equipped pharmaceutical factories in the kingdom. They comprise chloroform laboratories, an aerated-water factory, pharmaceutical laboratories, and warehouse and count-rooms. It is impossible in the compass of the present article to describe these departments with anything like fulness—indeed, it must be confessed that many sections cannot be described. In the chloroform-place, for example, all that one can see is raw material going in at one end of the plant and pure chloroform coming out at the other. One sees nothing—smells nothing—of the anæsthetic nature, and there is no apparatus of the kind in the world, for it is all of recent design by Dr. Inglis Clark, whom we regard as a mechanician as much as a chemist. Probably he would take his D.Sc. in the engineering department if he were to live his life over again. As it is his reputation is that of a chemist. The pharmaceutical laboratories were erected about four years ago, the intention being to meet the increasing

demand for medicinal specialities and pharmacopœial preparations. One floor of this large four-floor building is devoted to capsule-making, and other notable departments are for pills and fluid galenicals, in each of which there is apparatus of the most original character. Mr. D. B. Dott, F.R.S.E., the firm's research chemist, has also a suite of laboratories in this building. We must leave the aerated-water factory to the imagination; we suppose there is none larger in Scotland—certainly the syphon trade is immense, and the firm fit up their own syphons, having a foundry and finishing-shops on the establishment. The warehouse is a model of arrangement and method, and it is noticeable that in the works female labour is largely employed. There is no lack of energy about the firm; already they have pushed their business to the uttermost parts of Scotland, and have now a representative in the north of England. In time they will doubtless get as far south as London, and will take rank with the metropolitan houses. In spite of this activity, the members of the firm have done their share of public pharmaceutical work. Mr. Buchanan was for many years an examiner, and a very searching one he was, too. Botany was his subject. Long before Mr. Chamberlain's orchids were heard of, Mr. Buchanan had spent a fortune on the cultivation of these fascinating plants, and his gardens are one of the sights of Edinburgh. Few men in Edinburgh pharmacy

JAMES LAIDLAW EWING.

are more highly esteemed than he; he is Scotch to the backbone, and as large-hearted as they make them. Next in seniority in the partnership comes Mr. James Heron, who, while being a warm supporter of the Pharmaceutical Society's work in Edinburgh, has not taken office; but his colleague, Mr. Noble, has served as an examiner, and is now on the Executive. Mr. Robert Dick, who has done so much to make the firm's wholesale trade, pairs with Mr. Heron in the matter of public pharmaceutical work, and, as has already been mentioned, his Canongate colleague is Dr. Inglis Clark, who, after ten years' service to the Pharmaceutical Society as examiner in botany and a member of the Executive, had to give his whole time to business. Dr. Clark is the youngest partner of the firm, and is still on the bright side of 40. It took the workers of the Pharmaceutical Society in Scotland some time to discover Mr. J. L. Ewing, and yet for many years he had, as Convener of the Edinburgh Price-list Committee, given excellent proof of his administrative ability, and sustained the price-list and its regulations practically inviolate until the advent of "cutters" into the city. Mr. Ewing was admitted as a partner into Duncan, Flockhart & Co.'s on the death of his uncle, Mr. William Tait. He is rather a retiring man, and it is questionable if he would have come forward as a candi-

date for the North British Branch chairmanship if he had not been asked. His appointment has been one of the best things done in the North for many years past, and his administrative powers are worthy of greater scope than is afforded him in Edinburgh. As vice-chairman of the Conference Local Committee, he has had much to do with the local arrangements, and has greatly relieved Mr. J. R. Young, the chairman, whose health has been somewhat feeble lately.

#### MORPHIA MANUFACTURE.

The mention of Mr. Young's name naturally takes us on to another Edinburgh manufacture, as noted as the chloroform one. The modern Athens makes morphia for the world, and J. F. Macfarlan & Co. and T. & H. Smith & Co. are the manufacturers thereof. Mr. Young is the senior partner of the first-named firm. It is said that Edinburgh has become the centre of chloroform-manufacture in the United Kingdom owing to a fault in fiscal arrangements. At the time that Sir James Y. Simpson popularised the use of the anæsthetic, Scotland had the good fortune not to pay so heavy a spirit-tax as the less-favoured people south of the border; and so it happened that the Edinburgh manufactures (for the two firms which we have named are also makers of chloroform) took the lead, and they have kept it ever since. While there was no such advantage in the case of morphia, there were peculiar reasons why the manufacture of that alkaloid should be associated with Edinburgh. In the early decades of the century Dr. William Gregory occupied the Chemistry chair at the University, and he was one of the most original pharmaceutical chemists in pre-Pharmaceutical Society days. There are not a few processes which we owe to him, but by far the most important is that which he devised in 1831 for the manufacture of hydrochlorate of morphia. We refer to the calcium-chloride process, which is still pharmacopœial. Morphia does not appear to have been much used during the quarter-century following its discovery by Sertürner in 1817, and any that was in the market was made by Robiquet's magnesia method, which necessitated the use of alcohol. The product was undoubtedly contaminated with other opium alkaloids. The effect of Dr. Gregory's discovery was at once felt: hydrochlorate of morphia, from being an almost unknown salt of the alkaloid, became the most-used one, and its manufacture was commenced by Mr. John F. Macfarlan and the Messrs. Smith. Professor Christison was a thorough believer in Gregory's process, and he said: "My opinion coincides with the practice of the Edinburgh manufacturers, who continue to follow that process, and who produce a salt of unrivalled purity and cheapness." That sentence was written fifty years ago, and it is to the credit of Edinburgh that it has retained this branch of chemical industry, and is able at the present time to supply Germany, the United States, and all important countries in the world with "the salt of unrivalled purity and cheapness." There are few other medicinal chemicals, except chloroform, of which the same can be said.

#### MACFARLAN'S.

One of those at the foundation of the industry, and to whom British pharmacy owes a peculiar debt, was John F. Macfarlan. When Gregory's process was first made known, he had turned 50, and was a chemist and druggist in the North Bridge. He held a medical qualification—had, indeed, practised for some time before he adopted pharmacy—but he never actually gave up his connection with medicine. He was a member of the Royal Medical Society, a president, a treasurer, and honorary member of the same, and in this connection he had the intimate friendship of all the professors and the pick of the graduates of the Edinburgh Medical School. It was natural that he should take up Gregory's process. He was himself an accomplished chemist, a splendid man of business, and in his hands morphia-manufacture became a good thing. He also practically interested himself in the production of ether, chloroform, spirit of nitrous ether, and other distillates of that character, and when, a little more than forty years ago, methylated spirit was invented as the Government expression of duty-free spirit, Mr. Macfarlan made a study of it, and soon showed that he had a knowledge of its possibilities far beyond what the Excise people had dreamed of. It was in consequence of his researches that the Government

of the day appointed a special commission, consisting of Graham, Hofmann, and Redwood, to inquire if the use of methylated spirit, as Mr. Macfarlan suggested, was likely to defraud the Revenue. It is too long a story to go into now; let us briefly, therefore, say that Mr. Macfarlan was the first to show that pure chloroform and pure sulphuric ether can be made from methylated spirit. He also showed the same in regard to spirit of nitrous ether, so that when the necessity for restricting the use of methylated spirit was recognised, spirit of nitrous ether was ranked as one of the things which might not be made from it. But Mr. Macfarlan did more than demonstrate the chemistry of his subject. His association with the medical men of the city enabled him to get a most exhaustive trial of methylated chloroform at the Edinburgh maternity hospital, and upon the highly favourable report depends the confidence which has given methylated chloroform a place in medicine. Mr. Macfarlan was a founder of the Pharmaceutical Society (which means one of the first nine members in Scotland), a member of the Council, and President of the North British Branch. He was one of the most respected citizens in Edinburgh, a baillie of the city, and an active worker in many civic, social, and religious bodies.

When Mr. Macfarlan died, in 1851, the management of his firm devolved upon Mr. David Rennie Brown and Mr. James Robertson Young, the former controlling the technical, and

JAMES ROBERTSON YOUNG.

the latter the commercial, part of the business. Mr. Brown is another whose name is writ large in the annals of Scotch pharmacy. He served it well, and his memory is perpetuated by a portrait which is placed in the Board-room at 36 York Place. His son, Mr. David Brown, succeeded him in the management of the factory, which lies in the shadow of Holyrood. Sometimes in the morning, when one walks on the Royal Terrace or Calton Hill, the odour from the opium-vats in the valley below is wafted upwards. That is all that most people get to know of the factory and what goes on in it. It is a place covering several acres, and consisting of a number of separate buildings. It is some years since we walked through these. Then the demand for Lister's antiseptics (Messrs. Macfarlan & Co. were associated with Sir Joseph Lister in all his early experiments, and were his recognised makers long after he came to London) was great, and special departments of the factory were devoted to their manufacture. Since then the firm have added an aerated-water department to alkaloids and anæsthetics. They have still the retail and wholesale drug business at 17 North Bridge—and a smaller shop for such an historic business there is not, perhaps, in the kingdom. One has to be told that there are floors above and several beneath the street

before one can conceive the shop to be capable of anything like the business that is done in it. Behind his desk on the north side of the shop Mr. Young is to be found most days. Bailie Macfarlan's mantle fell upon him. He is Treasurer of the Royal Medical Society, and an administrator in many other public and charitable institutions in the city. His devotion to pharmacy has yet to be written about. In his early days he read papers to the Branch, became its President, an examiner, a member of Council; in fact, no one in Scotland has served the Pharmaceutical Society so long as Mr. J. R. Young, and those who differed from him in regard to the autonomy of the Branch would not be the last to acknowledge the value of his services. Mr. Young has, on several occasions, been a Vice-President of the Conference, is so now, and is at the head of the Local Committee.

#### SMITH'S.

There is a story told in Edinburgh that when Mr. Thomas Smith was a student of medicine there, and was wont to spend his evenings in his brother's shop in Duke Street, a good deal of experimenting was done in a quiet way. On one of these nights morphia was the subject of inquiry, and a frying-pan was the most impressive piece of the apparatus employed. The experiment was a success, and from the frying-pan came out morphia of novel purity. Mr. Smith took his L.R.C.S.E., and in conjunction with Dr. William

THOMAS SMITH.

Brown, the president of his college, he was appointed to attend patients in the Canonmills district during the cholera epidemic of 1831-32, but he has never practised since. Mr. Smith is an old man now, and his brother Henry has long since passed to his rest. No two names together bulk so largely in English pharmaceutical literature. Down to a recent date "T. & H. Smith" was the signature to the many contributions to our knowledge of the opium alkaloids which have come from Mr. Thomas Smith's pen. Few know him, but all who do have been charmed by his modest bearing, his passionate love for chemical research, and his intensely interesting conversation. For some years after his retirement from the firm of T. & H. Smith & Co. he lived at Heriot Hill House in Canonmills, beside the chemical-factory which he so long controlled. Here one could see him now and then in his studio-laboratory—perhaps helping his old colleagues to perfect some rare salt of morphia, to devise a new process, or perfect an old one; but generally it was some subject unconnected with business that he was working at—indeed, the last that the writer saw him engaged in was a photographic matter, which he was investigating for an architect friend.

It was on the occasion of one of these visits that Mr.

Smith was asked about the truth of the frying-pan story. A smile was the answer, and we were content to take the bustle outside as evidence enough of the resource and industry of the brothers Smith. They made many notable discoveries in regard to the composition of opium. They were the first to isolate cryptopine, one of the most remarkable of natural alkaloids, and several other opium principles are bracketed with their names, while they have put on record some careful determinations of the proportions in which the active constituents of opium exist in the drug. Their researches include other branches of pharmaceutical chemistry. For example, it is to them that we owe the discovery of aloin in Barbadoes aloes, and Conference visitors will find it worth their while to see the specimens which are in the Pharmaceutical Museum in Edinburgh. Certainly there are none finer to be seen anywhere. The Messrs. Smith also isolated an essential oil from Socotrine aloes. They got about an ounce from 400 lbs. of the aloes. How few have seen it!

The principal manufactures of the firm are the opium alkaloids, aloin, jalapin, scammony resin, chloroform, and ether, on the pharmaceutical side. They have also an important business in coffee essences and aerated waters. Their wholesale premises are in Duke Street, adjoining a neat retail pharmacy still associated with their name. The factory is passed on the way to the Botanic Gardens. Few enter it for the purpose of inspection, and we notice that the Local Committee do not include it in the programme of attractions. It would have been a liberal education to have had a walk round, for everything about morphia-making is not so simple as Gregory's process looks in the *Pharmacopœia*. Among the most noticeable things in the factory are the large "infusion-pots"—we may call them that—used for exhausting willow-bark. These would make respectable gasometers for some of the villages round Edinburgh. From this spot the United States receives the most of its morphia, "Smith's" being the brand in request there in spite of the enormous tariff which our American cousins have imposed upon themselves. Americans are partial to Edinburgh, though. Half the clergymen in the States get their clothes there, and the average American girl knows more about Rizzio and Mons Meg than many of the inhabitants of Auld Reekie.

#### A WORD ABOUT THE SHOPS.

Was it that mysterious and erudite correspondent of THE CHEMIST AND DRUGGIST, "Heder," who told once how he always made it a point to inspect chemists' shop-windows when he went a-holidaying? A good thing, too! Shop-windows are among the educational influences peculiar to the nineteenth century, and Edinburgh pharmacists recognise that, for at certain seasons of the year you will find in their windows all the educational announcements that the School of Medicine can make. There are huge posters and tiny handbills. Some of the latter have a blank space, in which an aspirant to academical renown has filled in his name. He is just beginning to teach, and will be wondrously content if he gets half-a-dozen pupils. Such is the way they begin to mount the ladder to the richly-endowed University chairs. A few of the present occupants were glad at one time to get their class-bills accepted for show by the chemists of the town. Birth and circumstance are not the key to success in Edinburgh. If a man has done brilliantly in his classes, and is a gentleman, he need not trouble himself as to whether his father was a mechanic or a millionaire.

But that is not shop-windows. Edinburgh pharmacies are, on the whole, a trifle disappointing. The founders of those in the centre have all had one style in their mind—good solid mahogany, with a little scrolled carving and a bit of mirror here and there—a style which lasts well, and is thoroughly respectable, but is never really impressive, except to the young men from the country, who all view them from the outside with that half-ambitious, half-depressing feeling that comes over one who is about to seek a situation inside. Looking at them without that sensation, what strikes us is that most of the principal pharmacies are very long and very narrow. This circumstance is prejudicial to effectiveness in fittings. Comparatively few shops in George Street and Princes Street were built for business purposes. These streets were originally residential quarters,

and with the exigencies of the times the ground-floors of the dwelling-houses have been remodelled into business premises. This accounts for the inordinate length of many shops.

#### GEORGE STREET.

The pharmacy of all others which Conference visitors will seek most is that of Mr. Peter Boa, 119 George Street. This business was formerly owned by the late Mr. John Mackay. After his death Mr. Boa succeeded to the management, and

JOHN MACKAY, LOCAL SECRETARY, 1871.

several years ago bought the business. It was at No. 55; however, that Mr. Mackay started when he went back to Edinburgh from his sojourn at Bell's, in Oxford Street; and while he was labouring there as Jacob Bell's Scotch *alter ego* he was also building up for himself a unique business in

PETER BOA, LOCAL SECRETARY, 1892.

culinary essences, condiments, and invalids' specialities, which business ultimately outgrew the capacity of 119 George Street, and was transferred to large premises in Canning Street, which is not far from the famous Free St. George's Church. The Canning Street business is a purely wholesale

one, with commodious pharmaceutical laboratories, and an aerated-water factory attached to it—Messrs. George Duncan Mackay, William Mackay, and Adam Kennedy being the partners. Mr. Boa retains his connection with the firm as their wholesale agent, as the long association of his shop with the Mackay firm still brings to it wholesale customers. The shop is a handsomely fitted one, and is notable for the elaborately carved cornices and panels. It is a single shop, with a commodious window. There is seldom much display in this, as our picture shows, for Mr. Boa has been known to advocate a wire-blind era for pharmacy. The wire blind is the Edinburgh index of professionalism. Mr. Boa is a high-toned man, then? Yes, in all that is professional in pharmacy; but he has his weather-eye open to business, and if there is a new drug or a new sundry just out, it is sure to be got at No. 119. Nor does he spare printers' ink, and he uses it effectively and quietly. The thoroughly practical character of his published papers is well known, and although he has been an examiner for six months only, he is a popular man in that capacity. It is a happy circumstance that the Conference local secretaries of 1871 and 1892 come from the same shop.

If we now walk along George Street, eastwards, we meet with other pharmacies which are worth looking at. There is Mr. J. B. Stephenson's exquisite place, 48 North Frederick Street (which, unfortunately, we are unable to illustrate). It is not a large shop, though double, but the design is one that has been copied by many owing to its perfect good taste. Mr. Stephenson is the solitary Scotchman who has filled the presidential chair of the Conference, and how well he filled it only those who were at Aberdeen in 1885 can understand. A man of high culture, a ready speaker and

JOHN BERTRAM STEPHENSON.

accomplished pharmacist, he has proved himself to be in his public capacities as President of the North British Branch, and Chairman of the Board of Examiners for Scotland. His services, especially in the capacity of Treasurer of the Branch, were a few years ago recognised by his colleagues in a handsome manner. It was well deserved, for there is no detail of official work which he undertakes that is too small for his attention, and he gives time and thought to his duties in connection with the Pharmaceutical Society that none but his immediate colleagues are aware of.

Turning again to George Street, on the north side we pass the shop of Gardner & Ainslie: old fashioned, for the business was established in 1778. We have to mount a few steps to reach it, and there we see Mr. William Ainslie, silver-haired, but still active—his son, William Wood Ainslie, associated with him in the manufacturing and commercial departments. This pharmacy is celebrated for its veterinary medicines, and as one of the first to popularise 1-in-7 concentrated preparations. There are more in the field now, but Gardner & Ainslie retain their reputation and, we hope, their customers. Mr. Ainslie, like Mr. Gardner before him, was a President of the Branch and an examiner.

On the opposite side of the street, No. 35, is one of the best pharmacies in Edinburgh, the double shop occupied by James Robertson & Co. This is the aristocratic business of the town, the old connection including the Castle and Holyrood. Mr. Thomas Thompson, an energetic

Englishman, is the present proprietor. He has not been content to repose on the traditions of the business and its old connection, for he has of recent years commenced the manufacture of flexible gelatine and other medicinal specialities, an aerated-water factory also being connected with the business. Mr. Thompson is the inventor of an ingenious apparatus for coating pills with gelatine, also of the method of combining the ingredients of Bland's pill with a hydrocarbon and capsuling the mass. The retail business was founded by Mr. James Robertson, who, in his declining years, took Mr. J. B. Stephenson into partnership. After Mr. Stephenson left, the business was carried on by managers, and it was during this period that Mons. Chantrell, the French teacher, who was hanged for poisoning his wife with opium, ingratiated himself with Mr. Thomas, the manager. Mr. Thomas died suddenly before Chantrell's trial came on, but the evidence of other assistants from the pharmacy was of considerable importance to the prosecution.

#### PRINCES STREET.

There are four pharmacies in Princes Street, and of these the most attractive is that of Mr. J. C. Pottage, the homoeopathic chemist. This is an elegant double shop situated in the midst of the principal hotels, and differing from all the pharmacies in the centre by its attractive window-displays. In the days when a Pears' soap-ball was sold for every sixpenny cake Mr. Pottage used to fill one of the two windows with the balls. They were always as bright as polished glass, and the effect of the display upon the ever-changing streams of sojourners, who saw it the first thing in the morning and the last at night, can be better imagined than described. One morning, a few years ago, there was a transformation. The brown-amber balls had given place to a beautiful display of cream-coloured soap-balls. They were as if made from ivory, and they were Mr. Pottage's speciality. The change startled Edinburgh, and one was apt to look over the street to see if the Castle was still standing. Now, why was this? There were all sorts of conjectures, but it was unanimously agreed that Pears' soap had been hit hard, and that the makers would not be happy until they got the window again. By-and-by the cream balls disappeared, and the old display returned. Yet there are no Esaus in the Pears family. On another occasion the west window was the medium of an astounding advertisement. We all know the virtues of sulphur. Sleep with a piece of it, or dust it in the stockings, and rheumatism vanishes. It fell to Mr. Pottage to give a business-like and modern touch to the old-fashioned cure. He had brimstone moulded into egg-shape. Each egg weighed a few ounces; there was a special virtue in the ovoid form—one could grasp it nicely in the hand—and a pair of them were a family medicine-chest which would last for generations. The eggs sold at 1s. each, and it took Mr. Pottage all his time to keep his window full of them, for the eggs sold by the gross, and moulders and packers could scarcely keep pace with the demand—all of which shows what there is in novelty. But while Mr. Pottage has a 'cute eye to the importance of trade of this character, he has never lost sight of the fact that he is a homoeopathic chemist, and the first to pioneer that cult in Edinburgh. His business connection ramifies through the whole of Scotland. His hotel trade is a thing to make one's mouth water, for Americans are devoted homoeopaths, and any day during the season one who drops into his shop may rub against a Vanderbilt or other toning American to whom money is a burden. Mr. Pottage is President of the British Homoeopathic Pharmaceutical Society, and is an Englishman.

It is a curious fact that two of the three firms in Princes Street bear English names. Although the late Mr. H. C. Baildon did not establish the business at No. 73, he went there from Coventry to manage it for a London firm, and the business as it was really made by him. Mr. Baildon was a force in Edinburgh pharmacy, with a very strong Scotch side to his character. This was shown in his energetic advocacy of a branch of the Pharmaceutical Society and a Board of Examiners being established in Edinburgh when the Pharmacy Act of 1852 was proposed. That was the price insisted upon as the equivalent for Scotch agreement with the Act. Thirty-five years later Mr. Baildon's son—Mr. H. Belyse Baildon, B.A.—was an equally strenuous champion for Scotch independence in pharmacy. By this time Baildon the

younger had served the Pharmaceutical Society as an examiner and as President of the Branch. He was at the head of the business in Princes Street, and had established a branch at the west end of the street nearer the abodes of consulting physicians. But he had always had a stronger liking for literature than for pharmacy. He had published poems, dramas, and essays to the extent of half-a-dozen volumes before he transferred the pharmacy business to his manager, Mr. Robert Aitken, retiring to devote himself to literature as literary critic to a leading Edinburgh newspaper. Mr. Robert Aitken, his successor, is an Edinburgh man, but he was several years in Bell's, is an experienced microscopist, and was one of the active workers in the Edinburgh Assistants' Association at its foundation. His principal pharmacy is just opposite the Royal Institution, the headquarters of the Royal Society of Edinburgh. It is a double shop a few steps above the level of the street, and there is in it many a relic of old-time pharmacy.

#### CUTTING IN EDINBURGH.

We have already referred to Messrs. Duncan, Flockhart & Co.'s and J. F. Macfarlan & Co.'s pharmacies in North Bridge. Besides those which we illustrate, there are many which are worthy of inspection, and to some of which historic interest is attached. There is Mr. Gilmour's, in Elm Row, Leith Walk; Mr. Mackenzie's and Mr. Dewar's, in Forest Road, close to the Infirmary; Mr. Lunan's, in Queensferry Street; Mr. Scobie's, and several others, in Shandwick Place; and in Leith there are a few old-established places, Mr. Coats's fine new pharmacy in Tolbooth Wynd being one of the handsomest in the district. One other illustration requires comment—viz., that of the Scottish Drug Depot's store, in Nicolson Street, a good example of "limited" pharmacy. It is just seven years ago that Edinburgh was first threatened with cutting. Previous to that the price-list was adhered to with astonishing unanimity by the whole of the trade. There was a feeling, from the smallest man in the suburbs to the biggest in the centre, that the list was a sacred thing, only to be departed from in "p.p." circumstances. Someone may have sinned now and then; still the "one-price" principle virtually reigned, and the trade was unanimous in maintaining it. The cutter came in 1885, in the shape of Inman & Co., Leith Street. There was no excitement, for what could one shop do against a hundred? Moreover, the style was peculiar to Edinburgh, the window-displays recalled the grocer, and though the premises were commodious, "they do not appear to be overwhelmed with business." So remarked our Edinburgh correspondent, when the newcomers had been in the place three months. By-and-by came Mr. Gray, an ex-bank manager, with a "limited" drug-depot at the foot of Leith Walk; cutting became an unquestionable reality; it invaded the drug-trade itself; cheap patents began to be heard of; one pharmacy after another broke away from the price-list; the trade was called together, there was a stormy meeting, and after that it was "every man for himself."

In one sense this has not been an unmixed evil for Edinburgh. While the price-list was maintained inviolate, pharmacies sprang up like mushrooms, and competition was entirely in multiplication of shops. Prescriptions were plentiful, prices were good, and provided a man was content to jog along and wait for the increase he would get it. Then it was largely a matter of picking up crumbs from older businesses; but now the enterprise and energy of each man gets full play, and in that sense the new way is an improvement. The store which we illustrate is one in Nicolson Street. It speaks for itself. The company has been in difficulties, but is recovering, and the founder was lately before the Old Bailey "beaks," and has gone into retirement for a time. Inman & Co. are still in Leith Street (the wisdom of our correspondent notwithstanding), and are "established."

#### WHOLESALE HOUSES.

Edinburgh is well supplied with wholesale houses. Several firms have already been mentioned who are concerned in special manufactures. Messrs. Raimes, Clark & Co. are the oldest firm of a purely wholesale character. Their premises are in Smith's Place, Leith Walk. The firm was founded by Mr. Richard Raimes, who afterwards took Mr. George Blanshard into partnership. After Mr. Blanshard's death John and

Richard, sons of Mr. Richard Raimés, sen., were associated with their father, and about five years ago Mr. Richard Clark joined the firm as a partner, death by this time having removed old Mr. Raimés and his son John. Mr. Richard Raimés, jun., was not a strong man, and, after a few years' co-operation with Mr. Clark, he succumbed to a pulmonary attack. Mr. Clark, we may say, was initiated into wholesale pharmacy at Smith's Place. He afterwards was in business for himself with Mr. William Pinkerton at Greenside Place, and it was at the expiry of that partnership that he went further down the walk. At the same time Mr. Pinkerton and Mr. Adam Gibson, of Leven, set up together, as Pinkerton, Gibson & Co., a wholesale and manufacturing drug-business in Thistle Street Lane, and fortune has favoured their undertaking. The Scottish Drug Depot also embarked on a wholesale trade, but they abandoned it when they got into difficulties. Since then Messrs. Anderson & Co. have, at Murano Place, started the manufacture of galenicals and pharmaceutical specialities. When the Conference visited Edinburgh in 1871 the bulk of the wholesale business done in Edinburgh was in crude drugs and patents. That is now completely changed. True, patents can be bought at something like  $2\frac{1}{2}$  per cent. above the manufacturers' prices, but no secret is made of the fact that drugs and preparations must be ordered along with them.

An important business is done from Edinburgh in essence of coffee, one maker of which we have already named. Another firm, whose name is especially known in the colonies, is Messrs. Thomas Symington & Co. Mr. Symington, from Gardner & Ainslie's, went to Dundas Street, to open a pharmacy. When he had brought his experiments on coffee to perfection he took Mr. J. Innes Fraser into partnership (pharmaceutical, not coffee-essential), left Mr. Fraser to look after the pharmacy, and devoted his whole time to the coffee. We have not had the good fortune to visit the coffee firm's laboratories and factory at Beaverbank. "Why don't you?" we imagine we hear Mr. Symington say; and when we do—well, the whole process of manufacturing the essences will be "quite clear," like the coffee made from them.

#### THE NORTH BRITISH BRANCH.

For many years after the Pharmaceutical Society took rooms in Edinburgh for the purposes imposed by the Pharmacy Act of 1852, the local managers of the Branch made it directly educational. Classes were held, and lectures given, preparatory for the examinations. But as the true functions of the Branch developed, these had to go by the board, partly because they were not very successful, partly because there were better things to do. In the first year of the Society's existence it had nine members in Scotland—viz., H. C. Baildon, W. R. Davenport, J. Duncan, W. Flockhart, James Gardner, Robert Lindsay, John Mackay (secretary), and James Robertson, of Edinburgh; and Gavin Stiell, of Dunfermline. There were two associates—T. S. Pattison and J. Horwood, both of Edinburgh. Now there are about five hundred adherents of all grades in Scotland. The history of the Branch, and of the men who have been associated with it, is too interesting to risk entering upon at this stage. Suffice it to say that it is the one branch remaining of dozens that Jacob Bell started, and if the same determination had been behind the whole of them as was behind the Edinburgh branch (for that it only was at first) they would all have been alive now, and the Pharmaceutical Society a stronger body. The Branch is excellently housed at 36 York Place, where George Combe, the phrenologist, used to live. York Place is reached from Waterloo Place by passing down Register Street and Elder Street. The left of the spot, where stands the "statue of the Iron Duke in bronze by Steel," points the way. Mr. J. Rutherford Hill, the popular Assistant-Secretary, will give everybody a hearty welcome, we are sure. It is in this house that the examinations are held, and all meetings in connection with the Branch. The Edinburgh Chemists', Assistants', and Apprentices' Association also holds its meetings there. It is only a year younger than the London Association, and it is its peculiar boast that it has never gone outside its own membership for a penny nor for a paper. More ideas have been taken from the Association for the B.P. than from any other body in the kingdom. That is another of its peculiarities. There is still another: the comma between "chemists" and

"assistants," which provides for the retention of members when they go into business.

#### HOW TO GET THERE.

As in ancient times all roads led to Rome, so in the present all lead to Edinburgh, and the fastest travelling in the world is thither. It seems superfluous, then, to tell people how to get to Edinburgh, but a note or two may not be out of place, taking London as the starting-point. From here there are three routes. The Great Northern is quickest and shortest, and the Midland is accounted the prettiest because it goes through the Scott country; the journey is about an hour longer. The London and North-Western has an excellent and quick service. Some of the Great Northern trains do the journey in  $8\frac{1}{2}$  hours, and a comfortable journey it is, especially in the day time, in which case an ample dinner is provided at York. The return fare at this season is 50s. third class; another 6s. takes the traveller on to Aberdeen and back, and 3*l.* is the fare for the return journey to Inverness, with the privilege of breaking the journey at any place north of Grantham. These extended journeys are good for those who wish to stay a few days after the Conference meetings. The Inverness ticket, for example, enables them to cross the Forth and Tay bridges, run up to Aberdeen, and by the Moray Firth coast (where there are the loveliest fishing-village glimpses imaginable) to Inverness. If the thing has been properly managed at King's Cross, the return journey will be down the Highland Railway to Perth, passing or stopping at Pitlochry and Dunkeld; then from Perth across Fifeshire to Edinburgh. Somewhere about the 15th of the month there are excursions to Edinburgh, Glasgow, and the principal towns in Scotland by the three railways at half the tourist rate for return. These are by specified ordinary night trains, and for periods of four to eleven days. The August excursions may fit in with the Conference. In former years special excursion trains were run. This year's style is better, we have heard.

#### WHAT TO DO.

We cannot pretend to describe in a paragraph all that is to be seen in Edinburgh. Let it be understood that Waterloo Place, where the Waterloo Hotel is, runs up from the Post-Office to Calton Hill. Nelson's monument, on the top of the hill, with the National monument, is a feature of the east end of the city; the Scott monument stands in the centre of Princes Street, and the Castle at the south-west end. These are the landmarks for the lost and strayed. Two things can be done in the morning. Walk up Calton Hill, round it, down by narrow lanes to Holyrood, up by the Canongate and High Street to the Castle, and back by the Mound and Princes Street to an 8 o'clock breakfast. Start at 6. After breakfast take a Morningside car, and on the top make the circular route back to the Post-office in time for the Conference meeting at 10. On another morning seek an appetite on the top of Arthur's Seat. The paths from the Queen's drive up are thickly strewn with appetites—say, those who never reach the lion's head in the morning—and for that reason the Assistants' Association should depute a staff of their botanical guides to pilot strangers upwards. If it rains, stay in bed; if not, remember that in bed you will not see what Marmion saw:—

The distant city glow  
With gloomy splendour red;  
For on the smoke-wreaths, huge and slow,  
That round her sable turrets flow,  
The morning beams were shed,  
And tinged them with a lustre proud,  
Like that which streaks a thundercloud.  
Such dusky grandeur clothed the height  
Where the huge Castle holds its state,  
And all the steep slope down,  
Whose ridgy back heaves to the sky,  
Piled deep and massy, close and high,  
Mine own romantic town!

IN CHICAGO there is a drug-store for every 1,200 inhabitants, and the number (of stores) is increasing. So says the *Registered Pharmacist*. Consequently there are a great many failures, rents being from \$100 to \$1,000 a month.

## PHOTOGRAPHIC STOCK FOR CHEMISTS.

In another column reference is made to the opportunities which chemists have of cultivating a trade in photographic materials, chemicals, &c. In the following notes, therefore, we set out a variety of formulæ for the solutions most usually in demand, and which the chemist may make up, keep in stock, and sell at a good profit.

## PYRO. AND AMMONIA.

DEVELOPING agents are very numerous, but pyro. and ammonia hold their own against all comers, and are by far the most generally used. The formula given below is one which Mr. H. P. Robinson, the well-known photographer, used for most of his successful pictures:—

| A.                      |         |  |  |  |
|-------------------------|---------|--|--|--|
| Pyrogallol acid .. .. . | 1 oz.   |  |  |  |
| Citric acid .. .. .     | 40 grs. |  |  |  |
| Water .. .. .           | 7½ oz.  |  |  |  |

| B.                           |          |  |  |  |
|------------------------------|----------|--|--|--|
| Bromide of potassium .. .. . | 120 grs. |  |  |  |
| Water .. .. .                | 7 oz.    |  |  |  |
| Ammonia '880 .. .. .         | 1 "      |  |  |  |

| C.                           |         |  |  |  |
|------------------------------|---------|--|--|--|
| Bromide of potassium .. .. . | 80 grs. |  |  |  |
| Water .. .. .                | 8 oz.   |  |  |  |

The solution C is only to be used in emergency. Of the solutions A and B use 60 minims each to 3 oz. of water.

The following formula is recommended by Mr. Lionel Clark, as giving the "best gamut of graduations":—

|                               |             |
|-------------------------------|-------------|
| Pyrogallol .. .. .            | 2 grs.      |
| Sulphite of soda .. .. .      | 8 "         |
| Bromide of potassium .. .. .  | ½ "         |
| Ammonia '880 .. .. .          | 2 minims    |
| Distilled water up to .. .. . | 1 fluid oz. |

For instantaneous work, Mr. Clark says, "we want a developer rich in pyro., very little bromide, and a fair quantity of alkali," and he gives the following as meeting the requirements:—

|                      |             |
|----------------------|-------------|
| Pyro. .. .. .        | 4 grs.      |
| Bromide .. .. .      | ½ "         |
| Ammonia '880 .. .. . | 3 minims    |
| Water up to .. .. .  | 1 fluid oz. |

In these days of hand-cameras, the chemist may frequently be asked for a special developer for instantaneous work. The last quoted formula is likely to suit his customer. This developer is very slow, and care and patience will be required in using.

## TEN-PER-CENT. SOLUTIONS.

MR. C. H. BOTHAMLEY, F.I.C., F.C.S., in his excellent "Manual of Photography," gives the following formula for development with pyro.:—

## No. 1. Developer.

|                                  | Oz. |
|----------------------------------|-----|
| Pyro .. .. .                     | 1   |
| Potassium metabisulphite .. .. . | 1   |
| Water up to .. .. .              | 10  |

## No. 2. Accelerator.

|                      | Oz. |
|----------------------|-----|
| Ammonia '880 .. .. . | 1   |
| Water up to .. .. .  | 10  |

## No. 3. Restrainer.

|                          | Oz. |
|--------------------------|-----|
| Ammonium bromide .. .. . | 1   |
| Water up to .. .. .      | 10  |

These are, as it will be seen, 10-per-cent. solutions—i.e., 1 part of the active agent is contained in every 10 parts of the solution. Mr. Bothamley's remarks upon 10-per-cent. solutions are worth attention because this form of developer is one which can easily be understood. Messrs. Marion & Co. some few years since supplied 10 per-cent. solutions ready prepared, and were at the trouble to give very

complete instructions as to the proportions to be used for most of the plates in the market.

Mr. Bothamley says:—"A normal developer would contain in each fluid oz. 30 fluid grs. (or minims) of the pyro. solution, 30 fluid grs. (or minims) of the bromide solution, and 60 fluid grs. (or minims) of the ammonia solution. With this developer a quarter-plate requires from 1 to 1½ oz., half-plate 2 oz., and a whole-plate 3 oz."

## PYRO.-POTASH.

A VERY clean-working developer is pyro. and potash, and the following formula has received practical proof:—

| A.                          |            |  |  |  |
|-----------------------------|------------|--|--|--|
| Pyro. .. .. .               | 2 drs.     |  |  |  |
| Bromide of ammonium .. .. . | 2 scruples |  |  |  |
| Citric acid .. .. .         | ½ "        |  |  |  |
| Methylated spirit .. .. .   | 1 oz.      |  |  |  |
| Water .. .. .               | 1 "        |  |  |  |

Dissolve the bromide and citric acid in the water first, then add the spirit, and lastly the pyro.

## B.

|                                               | Oz. |
|-----------------------------------------------|-----|
| Carbonate of potash (chemically pure) .. .. . | 1   |
| Water .. .. .                                 | 1   |

In practice use 1 dr. of A to 3 oz. of water, flood the plate for two or three minutes, and then return it to the measure and if the image is slow in "coming up," add three or four drops of B. With this formula development should be complete in about ten minutes.

## BEACH'S DEVELOPER.

ANOTHER formula for a pyro.-potash developer which had a great run amongst amateurs, and is still a stock line with all the wholesale dealers, is "Beach's." This developer was introduced some years ago by Mr. F. C. Beach, of New York. The formula is as follows:—

| A.                              |   |  |  |  |
|---------------------------------|---|--|--|--|
| Warm water (distilled) .. .. .  | 2 |  |  |  |
| Sulphite of soda (pure) .. .. . | 2 |  |  |  |
| When cold add to above—         |   |  |  |  |
| 1st, Sulphurous acid .. .. .    | 2 |  |  |  |
| 2nd, Pyrogallol acid .. .. .    | ½ |  |  |  |

## B.

|                                    | Oz. |
|------------------------------------|-----|
| (a) Water (distilled) .. .. .      | 4   |
| Carbonate of potash (pure) .. .. . | 3   |
| (b) Warm water (distilled) .. .. . | 3   |
| Sulphite of soda .. .. .           | 2   |

Mix (a) and (b).

When using take 1 dr. of A to each 2 oz. of water; add a few drops of B, and continue adding until the image appears. The chemist making up this developer will find how large a profit is attached to such business.

With one more formula we will leave our "old friend pyro."—i.e., pyro.-soda:—

| A.                     |           |  |  |  |
|------------------------|-----------|--|--|--|
| Pyro. .. .. .          | 2 drachms |  |  |  |
| Sulphuric acid .. .. . | 10 drops  |  |  |  |
| Water .. .. .          | 16 oz.    |  |  |  |

## B.

|                                      | Oz. |
|--------------------------------------|-----|
| Sodium sulphite .. .. .              | 3   |
| Carbonate of soda (crystals) .. .. . | 2   |
| Water .. .. .                        | 16  |

In use take 1 oz. of both A and B, and add 2 oz. of water. In using pyro.-potash or pyro.-soda the worker does not get worried with chemical fog or iridescent marking, as is too often the case, especially with the beginner, when using pyro.-ammonia.

Practically, the foregoing formula may be used with any brand of plates.

## FERROUS OXALATE.

THE ferrous-oxalate developer is not now much used, except for bromide paper. It is quite easy to make up, but requires the greatest cleanliness, and is exceedingly sensitive to hypo.

## HYDROQUINONE.

HYDROQUINONE, as a developing agent, has become exceedingly popular, although some consider it is better suited for the development of lantern-slides and transparencies than for negatives to be printed from.

Quoting again from Mr. C. H. Bothamley, the following two formulæ will be found thoroughly reliable. Many favour hydroquinone, because it does not stain the fingers and clothes as do the developers in which pyro. is an agent:—

| A.              |    |    |    |         |
|-----------------|----|----|----|---------|
| Hydroquinone    | .. | .. | .. | 80 grs. |
| Sodium sulphite | .. | .. | .. | 180 "   |
| Water up to     | .. | .. | .. | 10 oz.  |

| B.                    |    |    |    |         |
|-----------------------|----|----|----|---------|
| Caustic soda (sticks) | .. | .. | .. | 40 grs. |
| Potassium bromide     | .. | .. | .. | 20 "    |
| Water up to           | .. | .. | .. | 10 oz.  |

This should be mixed in equal volumes immediately before use.

In the second formula given by Mr. Bothamley the solutions are much stronger:—

| A.              |    |    |    |               |
|-----------------|----|----|----|---------------|
|                 |    |    |    | Oz.           |
| Hydroquinone    | .. | .. | .. | $\frac{1}{2}$ |
| Sodium sulphite | .. | .. | .. | 1             |
| Water up to     | .. | .. | .. | 10            |

| B.                    |    |    |    |               |
|-----------------------|----|----|----|---------------|
|                       |    |    |    | Oz.           |
| Caustic soda (sticks) | .. | .. | .. | 1             |
| Potassium bromide     | .. | .. | .. | $\frac{1}{2}$ |
| Water up to           | .. | .. | .. | 10            |

If the plate be correctly exposed, take 80 fluid grs. (or minims) of A and 20 fluid grs. (or minims) of B, and dilute to 1 oz. with water.

## EIKONOGEN.

EIKONOGEN, which has been introduced about three years, as a developing agent, has quickly come into public favour, and is now used extensively by amateur photographers. It has quite recently been made up in cartridges, which are exceedingly handy for the tourist. In these cartridges the eikonogen is separated from the sulphite of soda and carbonate of soda by a wad. The cartridge has merely to be broken, and the contents dissolved in  $3\frac{1}{2}$  oz. for the most rapid work, 7 oz. for slow shutter work, and 10 oz. for time-exposures. They are supplied by Messrs. R. W. Greeff & Co., 29 Mincing Lane, E.C., who are also wholesale agents for rodinal, to which reference will be made further on. There are several good eikonogen formulæ. The following may be used with almost any plates, but is particularly recommended for the "Mawson" plates:—

| A.                           |    |    |    |            |
|------------------------------|----|----|----|------------|
| Eikonogen                    | .. | .. | .. | 200 grains |
| Sulphite of soda (recrystd.) | .. | .. | .. | 200 "      |
| Distilled water to make      | .. | .. | .. | 20 oz.     |

| B.                           |    |    |    |              |
|------------------------------|----|----|----|--------------|
| Carbonate of potash          | .. | .. | .. | 2,400 grains |
| Sulphite of soda (recrystd.) | .. | .. | .. | 1,000 "      |
| Distilled water to make      | .. | .. | .. | 20 oz.       |

| C.                           |    |    |    |            |
|------------------------------|----|----|----|------------|
| Caustic potash               | .. | .. | .. | 800 grains |
| Sulphite of soda (recrystd.) | .. | .. | .. | 1,800 "    |
| Distilled water to make      | .. | .. | .. | 20 oz.     |

For use take 3 parts of A to 1 part of B. For instantaneous or under-exposed negatives use C instead of B. The A solution should be mixed with warm water. To correct over-exposure, add a few drops of 10-per-cent. sol. potass. bromide.

## HOW TO CLEAN NEGATIVES.

MR. T. W. KIRBY, writing to the *British Journal of Photography*, says:—"The simplest way of removing the green or iridescent stain on the negative is by gently rubbing the surface with a tuft of cotton-wool, moistened with spirit, or it can be done directly after fixing by rubbing with the finger; of course it requires more care than with the spirit when the negative is dry."

## HYDROQUINONE WITH EIKONOGEN.

AN easy-working formula for a "mixed hydroquinone and eikonogen developer" was given recently before the members of the Photographic Club of Paris:—

|                  |    |    |    |    | Grammes |
|------------------|----|----|----|----|---------|
| Sulphate of soda | .. | .. | .. | .. | 100     |
| Eikonogen        | .. | .. | .. | .. | 15      |
| Hydroquinone     | .. | .. | .. | .. | 5       |

These ingredients are dissolved in 1 litre of hot water and, when cool, is added—

|                     |    |    |    |            |
|---------------------|----|----|----|------------|
| Carbonate of potash | .. | .. | .. | 50 grammes |
|---------------------|----|----|----|------------|

With this developer there is no veiling the shadows and it gives the characteristic strength obtainable with hydroquinone. Mr. J. T. Chapman, of Manchester, has introduced a similar developer which he sells as "Hydro-cum-Eiko."

## RODINAL.

"RODINAL," which is almost the latest developing agent, is gaining ground quickly. It is a "one solution," a fact which will render it popular amongst those photographers (a large number) who like to work the easiest way. Exposures when working with this developer may be shorter than under other conditions. The patentees say "about half that given to pyro." To develop, mix as follows:—

|         |    |    |    |    | Parts    |
|---------|----|----|----|----|----------|
| Rodinal | .. | .. | .. | .. | 1        |
| Water   | .. | .. | .. | .. | 24 to 30 |

As the image on under-exposed plates will appear rapidly, it is well to finish in a solution of 1-30. Should there be considerable under-exposure, add another 5 to 10 parts of water. With an over-exposed plate, working a 1-30 solution, the developer should have added to it the following by drops:—

|                   |    |    |    |    | Parts |
|-------------------|----|----|----|----|-------|
| Bromide of potass | .. | .. | .. | .. | 1     |
| Water             | .. | .. | .. | .. | 3     |
| Rodinal           | .. | .. | .. | .. | 3     |

The developer gives good density, and can be recommended to those requiring an easy working solution.

## READY-MADE DEVELOPERS.

If space had permitted, formulæ would have been given for most of the brands of dry-plates in the market, but this cannot be done.

It is the practice of almost all makers to send out the formulæ they recommend with the plates, and it would lead to profitable business if, after having decided upon the brands of plates to stock, the makers' developers should be put up in bottles, which will permit of a very fair profit. From a casual glance at some price-lists, we find firms charging for—

|                                   |     |
|-----------------------------------|-----|
| Pyro-ammonia, 6-oz. bottles (3),  | 3s. |
| Pyro-potash, 20-oz. bottles (2),  | 4s. |
| Beach's, 2 solutions, per pint,   | 3s. |
| Hydroquinone, 20-oz. bottles (2), | 3s. |
| Eikonogen, single solution, 1s.   | 6d. |

The adoption of a special name for a developer has done much to popularise it, such as "Beach's," "Fumeaux," "Invicta," &c.

## UTILISING OLD HYDROQUINONE DEVELOPERS.

If negatives are weak and require strengthening, use the following instead of intensification with bichloride of mercury:—

|                                                |    |    |    |    |            |
|------------------------------------------------|----|----|----|----|------------|
| Old hydroquinone bath                          | .. | .. | .. | .. | 55 c.c.    |
| Citric acid                                    | .. | .. | .. | .. | 10 grains. |
| Red prussiate of potash solution, 10 per cent. | .. | .. | .. | .. | 10 c.c.    |
| Water                                          | .. | .. | .. | .. | 50 "       |

A negative immersed in this bath becomes dark in from two to three minutes; when the required degree of intensity is obtained the negative is washed and allowed to remain in the water for fifteen minutes. The same bath can be used for about thirty negatives—at least, so says A. Margin in *Les Annuaire des Photographiques*.

## AN OLD HERBAL.

By C. C. BELL, Epworth.

TO the student of medicine and its history there are few more interesting books than an old herbal, and few old herbals have a greater claim upon the attention of Englishmen than Johnson's "Gerarde," or the still older and rarer work of Henry Lyte, the full title of which runs thus:—"A Nievve Herbal or Historie of Plantes, wherein is contained the whole discourse and perfect description of all sortes of Herbes and Plantes: their divers and sundry Kindes: their straunge Figures, Fashions and Shapes: their Names, Natures, Operations and Vertues: and that not onely of those which are here growing in this our Countrie of Englande, but of all others also of forrayne Realmes, commonly nsed in Physicke. First set foorth in the Doutche or Almaigne Tongue by that learned D. Rembert Dodoens, Physition to the Emperour: and nowe first translated out of French into English by Henry Lyte Esqnyer. At London, by me Gerard Dewes, dwelling in Pawles Chnrch yarde, at the Signe of the Swanne. 1578." The title-page has a wood-cut border representing the garden of the Hesperides and other subjects—the same in both the English and the French version, except that the former has a vase of flowers instead of the coat of arms, supposed by a writer in *Notes and Queries* (to whom I am indebted for some of the following particulars) to be that of Charles V. The last page has this colophon:—"Imrinted (sic) at Antwerpe by me Henry Loë, Bookeprinter, and are to be solde at London in Powel's Church Yarde by Gerard Dewes." The French version from which Lyte translated was that of Charles de l'Escluse (Clusius), the "Histoire des Plantes" (Anvers: Jean Loë, 1557, folio), with the same figures as Lyte's, which were reproductions from Dodoens's original "Cruydeboeck," a work in Flemish, also printed by Jan van der Loe, in 1554—a great rarity now, only a few copies being known to exist.

Rembert Dodoens (or, to give him his Latinised name, Dodonæus) was born at Mechlin in 1517, and became in turn physician to the Emperors Maximilian and Rodolph II. Both he and his French translator, Clusius, are sufficiently familiar figures, but a few particulars concerning Lyte may not be out of place here. Anthony Wood says he was of the family of Lyte, of Lytes-Carey, Somerset; he was born in 1529 and died 1607. The only known original work of his that ever was printed is "The Light of Britayne: a Recorde of the honorable Originall and Antiquitie of Britaine" (London: 1588, 8vo), reprinted in 1814. He left, however, one or two works of a similar kind in MS., and copious MS. notes in a copy of Clusius's French version of Dodonæus. His own version of this work, now under review, is a thick, black-letter folio, of nearly 800 pages, enriched with a great number of excellent plates from the source already indicated—always one, frequently two, and sometimes three or four, to a chapter. There are 661 chapters in the six books which complete the history, and some of the matter is from another edition of Dodonæus, probably the Flemish one of 1563. So much for the origin of this work. But our debt to Dodonæus does not end here. In the year 1583\* he collected into one volume all his former works, dividing it into thirty books, and enriching the whole with 1,305 plates; and this, through a translation by Dr. Priest, who died without publishing it, became the foundation of Gerarde's great work, though the fact was never suitably acknowledged by him. Indeed, in his preface, he very disingenuously refers to Priest's translation as if he knew it by hearsay only; and yet Johnson, in his edition of "Gerarde," asserts that the bulk of his material was stolen from Dodonæus, and that so clumsily as greatly to impair its value. A pretty close comparison of Lyte's translation of the first work of Dodonæus with Johnson's "Gerarde" proves that there was good ground for this charge. "Gerarde" is certainly fuller, and both his natrual garrulity and his eager interest in his subject give much charm to his pages; but even in the amended edition his debt to the earlier writer is

evident, and many of his "figures" (or plates) are exactly copied from Dodonæus.

Lyte's book was not the first of its kind in England, but the only two earlier works that Johnson thought worthy of note were the "Stirpium Adversaria Nova" of Lobel and Pena, published in London in 1570, and the still earlier herbal of Dr. William Turner (1548), neither of which attained so wide a popularity or dealt so thoroughly with the subject. Dodonæus, moreover, was a man of wider culture than Turner, and was more practical than the authors of the "Adversaria"; and his work, as Lyte first gave it to us, may fairly be regarded as the foundation of most subsequent work of the kind in our country. Its immediate popularity was considerable, for within thirty years of its first appearance it was more than once reprinted,\* though without the plates, and its success with the public was doubtless the reason for Priest's translation of its author's later volume. It is therefore not without reason that the poet Drayton in his "Polyolbion," mentions Dodonæus and Gerarde together:—

Of these most helpful herbs yet tell we but a few  
To those unnumbered sort of samples here that grew;  
What justly to set down even *Dodon* short doth fall,  
Nor skilful *Gerarde* yet shall ever find them all.

It is quite true that neither of our authors exhausted the materia medica of the vegetable kingdom, but the number of more or less medicinal plants they describe, apparently to a great extent from their own knowledge, is amazing, nevertheless. Dodonæus has nearly 700, and Gerarde probably about half as many more; and what is still more amazing is the variety and range of their curative properties. It would seem to have been almost impossible for men to be long ailing, and out of the question that they should die, with such an armoury of weapons against disease. Their very names are virtues—all-good, all-heal, self-heal, poor man's treacle, the blessed herb, grace of God, master wort; how could any but the most heroic complaint so much as come within range of these?

It must be confessed that, learned as Dodonæus was for his time, his method appears now to have been curiously unscientific. His work is divided (as already said) into six books, of which the first purports to treat of "Sundry sorts of herbes and plantes," and this description, at least, is accurate enough, such diverse plants as comfrey, strawberry, fleabane, hemp, and southernwood being included in it. This book possibly comes first for the same reason that induced Dante to make Limbo the ante-room to his visionary world and place in it all whom he had a difficulty in otherwise classifying. The second book treats of "pleasant and sweet-smelling flowers, herbs, and weeds"; the third of "medicinal rootes and herbes that purge the body, also of noysome weedes and dangerous plantes" (amongst which is rhodium); the fourth of "corne, grayne, pulse, thistles, and suchelyke"; the fifth of "herbes, rootes, and fruites whiche are dayly used in meates"; the sixth of "trees, shrubbes, bushes, and other plantes of woody substance." Arbitrary as this division seems, it is by no means strictly adhered to, every book containing some plants which might have been placed with equal appropriateness elsewhere. These, however, are faults natural to the age, and do not seriously detract from the value of the work. It is, indeed, difficult to imagine a satisfactory classification where the principles which make classification possible are unknown. An almost equal difficulty in the way of these pioneers of botanical and medicinal science was the want of a scientific terminology. Admirably close and careful as their descriptions of plants, &c., frequently are, it is impossible to read them without a smile, and yet one is almost ashamed to smile at men whose labours have made science possible. Take, for example, this description of an orchis—the "foul standergrass" of Fletcher's *Clorin*:—

"The second is somewhat like to the aforesayde, but his leaves be narrower and playner, whereof some do compasse or embrace or clippe aboute the stalke; the spikie tnfte is

\* Johnson, Preface to "Gerarde."

\* 1586, 1595, 1600 (?), 1639 (?), are the dates given in *Notes and Queries*. There is also a so-called abridgment, really a different book altogether—"Ram's little Dodeon: a brieve Epitome of the New Herbal or History of Plants, by William Ram, Gent. Imprinted at London by Simon Stafford, 1606." 4to. See *Notes and Queries*, 8th S., 1, 379.

short and thicke, with a number of floures, of a bright or white purple colour, and speckled on the inside with a great many purple spottedes, and small dark lynes: fashioned also like to an open Hoode or Helmet, out of which also there hang certayne thinges as it were small rabbets, or yong myse, or littell men without heades, with their armes and legges spread and cast abroade, in like manner as they were wonte to paynte little chyldren hanging out of Saturnes mouth: at the foot of the stalke are a couple of round buttons, as big as nutmegges: with certayne great hearie (hairy) stringes or thredes annexed or growing by them." Picturesque as this is, one can imagine a student who has to pack his knowledge closely going back to his Bentley or Balfour with less disrelish than of old for their "sesquipedalian epithets" and "preposterous appellatives."

Under the circumstances already referred to, comparison of Lyte with Gerarde is natural, and proves in many respects instructive, both their agreement and their differences having something to teach us. Thus it is noteworthy, in view of recent controversies, that neither of them has any mention of peppermint under that name, though each gives descriptions of above a dozen different "mints." It is, perhaps, rather curious than instructive to find them both attributing most marvellous ecboic properties to sowbread. Lyte says of it that women should not even plant it in their gardens, "for it will hinder them if they do but only goe over it"; and Gerarde backs this opinion by fencing his bed of this plant with crossed sticks for fear ladies should venture too near it. The differences between our two writers relate chiefly to the names of plants. Thus Lyte's *Lavandula mas*, or "English spike," is Gerarde's "common lavender"; and Gerarde's "English spike" is Lyte's *Lavandula femina*. Again, Lyte's cuckoo-flower is a wild pink (or gilliflower); Gerarde's is the *Cardamine pratensis*, the flower we still know by this name. Lyte calls red maithes Passe flower; Gerarde, the field anemone. In this connection, Gerarde's note on oil of spike may be quoted:—"We have in our English gardens a small kind of lavender, which is altogether lesser than the other, and the flowers are of a more purple colour and grow in much less and shorter heads, yet have they a far more grateful smell; the leaves are also less and whiter than the ordinary sort, and this is called spike without addition and sometimes lavender spike, and of this by distillation is made that vulgarly known and used oile which is tearmed oleum spicæ, or oile of spike." It is in such particulars as this that Gerarde's greater interest lies for an English reader; but Lyte, within his own limits, is at least equally valuable, and, indeed, in some respects more so, his German author being certainly more learned and accurate than our Cheshire herborist. What is especially noticeable in Lyte is his freedom from many of the superstitions of his day. He does, indeed, occasionally notice the supposed magical properties of this or that herb, but it is almost always with the addition of some qualifying clause such as "as some have said," or (as in the case of the worms found in teasels as a charm against ague) "as Dioscorides writeth." He has, moreover, no mythical plants, though he is eager to welcome all novelties—such as "the Indian sunne," or "Golden floure of Perrowe" (our sunflower)—of which he gives an elaborate description and a very fine plate. Of the flower itself, he says:—"In the very top of the sayde high stalke there groweth a very large and most excellent floure most likest to camomill or chrysanthemum, but much larger, and in quantitie almost like to a pretie broade hatte, so that oftentimes when the circuit or uttermost compasse of the sayde floure is measured, it is found to be of the breadth of half a foote." Tobacco came too late to be included in his book, but it is, of course, in "Gerarde." Lyte (following his author) is rather fond of classical fable and allusion, and this is almost his only departure from the path of strict utility. Thus he has the pretty myth that the violet (in Greek, *Ion*) was created by Jove for the food of Io when she was changed into a heifer; nor are the legends of Narcissus, Hyacinthus, and Adonis wanting in his pages. He is careful to tell us that moly is the herb whose virtue preserved Ulysses from the enchantments of Circe, and that Apuleius says that mullein was this self-same herb (differing therein from Dioscorides). He tells us that lilies, together with the stars in the Milky Way, are fabled to have sprung from the milk of Juno, spilt through heaven and earth alike when Jove snatched Hercules from

her breast; that roses drew their colour from the blood of Venus when she wounded herself for Adonis; that the crocus is so named after the maiden unwittingly "stroken in the head by Mercurie" as they played at throwing the hammer (or was it the hatchet?), and so on. These, however, are only diversions. The bulk of the book aims at practice, and that in a very straightforward and serious fashion. It is curious, by the way, to note that as a rule those herbs upon the virtues of which most stress is laid are precisely those which of all medicinal herbs are now least used, and *vice versa*. Thus twenty distinct paragraphs are devoted to the uses of rue, and twenty-four to those of laser (with which asafœtida is included), and only nine to those of the poppy. Cyclamen's uses run to fourteen paragraphs, those of rhubarb to six only. These "uses" are not always purely medicinal, but refer sometimes to the value of the herbs as pot-herbs or in salads, or for other purposes. Amongst pot-herbs cowslips are included (cowslip tea is still a common drink in some neighbourhoods), and hops are recommended as ingredients in a salad. Frequently too, of course, these notes are intended not for the professional *medicus*, but for the careful housewife, one of whose duties was to physic as well as to feed her household. They carry us back, in short, to the time when every garden contained not only "vegetables" and flowers, but "simples" as well; to such gardens as the one so prettily described by the Scottish poet Dunbar some seventy years before the date of Lyte's book—

Into your garthe this day I did persew,  
Thair saw I flouwis that fresche wer of hew;  
Baith quhite and reid most lusty wer to seyne,  
And halsum herbis vpon stalkis grene;  
Yit leif nor flour fynd could I nane of Rew.

The last line must, of course, be taken metaphorically. Rue was surely there. Even yet it is common enough in country gardens to find beds devoted to such herbs as rue, marjoram, mercury, &c., which are cultivated for their medicinal virtues; and within a radius of three or four miles from the spot where these lines are written some half-dozen old women (of both sexes) could be found who not only cultivate such herbs, but are deeply learned in Culpeper, and "practise" amongst their neighbours, occasionally with queer results.

To such persons as these, our old "Herbal" would probably be of more use than to the professional pharmacist, yet even for the latter it is full both of instruction and entertainment. The chapter on "Cistus," with its account of the uses of "ladanum," is alone almost sufficient to explain the origin of the term *Laudanum*; that upon "Scammony" is conclusive as to the composition of diagridium, which, though some persist in considering it as scammony pure and simple, is really scammony digested or boiled with quinces. These are examples of the many points of practical utility that are scattered up and down its pages. Historically, it is most valuable, as has been already indicated, but from whatever point we regard it, this book of Master Henry Lyte's is well calculated to increase our respect both for the industry and the intelligence of our forerunners in medical science.

THE PROPAGATION OF NUTMEGS is decidedly on the increase in Jamaica, and there they thrive well far beyond 1,000 feet above the sea-level, in spite of Dr. Nichols' assertion in his "Text-book of Tropical Agriculture."

THIS SMART BIT OF RHYME we got from the advertisement pages of an American contemporary. There are ideas in it which are worth attention:—

Should the dandruff come to settle  
'Neath the thatching of your  
pate,  
For the baldness of a friar  
You will not have long to wait.  
If your hair is slowly thinning,  
It is time you turned about  
To secure a safe prescription  
And prevent its dropping out.

Dermatologists all tell us,  
And undoubtedly 'tis true:  
For a cranium's best int'rest  
Once a week we must shampoo.

Just explore your polar regions  
Using Mr. Thingumy's soap;  
It will crown itself with glory,  
And your head with hair and  
hope.

\* Lord Beaconsfield, as Primrose Day annually reminds us, considered primroses "excellent in a salad."

## BE PREPARED!

**CHOLERA** is rampant in Eastern Europe, and has reached Paris. Here at home the mind of the public is already alarmed. "**SANITAS**" Disinfecting Fluid is the only Disinfectant that can be taken internally, and the "**SANITAS**" DISINFECTANTS and APPLIANCES have the Largest Sale in the World.

KEEP UP YOUR STOCKS AND BE PREPARED.  
NEW PRICE LIST NOW READY.

THE SANITAS CO., LIM., BETHNAL GREEN, LONDON, E.

SHOW CARDS, 24 x 17 or 17 x 12,  
Free to any address in the United Kingdom

### SALUTATORY.

WE take a special pride in submitting this number of THE CHEMIST AND DRUGGIST to subscribers. Such a mass of material, every page, every line of which, indeed, is of more or less direct concern to those for whose benefit it is compiled, cannot have been got together without a great deal of work. Since Monday of this week the machine department of one of the largest printing establishments in London has been throbbing out sheets of this journal by the mile. The type and blocks from which this issue has been printed weighed over four tons. Before all this matter came to the machines a great number of our good friends co-operated heartily with us, contributing both skill and money to make the Summer Number of THE CHEMIST AND DRUGGIST worthy of the trade and worthy of this bright summer. There is a lot of enterprise in the chemists' trade now; more in proportion to its extent, we should say, than in any other business. The labour, the skill, the artistic and literary merits of many of the announcements in this journal are most striking. We need not particularise them here, but we may be allowed to express our satisfaction at being honoured

with so large a measure of the confidence of eminent firms in conveying their messages to the trade.

The subscriber who gets this journal as one of fifty-two supplied to him for his ten shillings, besides the Diary, may reckon that the particular package which he holds in his hands this week has cost him something under twopence; and for that price we pay the carriage to him wherever on this earth he may reside. He can hardly complain of overcharge. If he will only make a fair business use of the contents the advertisers will be satisfied also, while we ourselves shall find a reward somewhere and somewhen. Anyway, neither subscribers nor advertisers need disturb themselves about us. This seems to be something like the Socialist ideal—we are all serving the community and all are doing fairly well at it.

The success of a trade journal and its practical usefulness depend more on co-operative goodwill than most other journals, though these would be none the worse for a little more of it. For a staff in a London office to attempt to teach chemists all over the world how to do their business would be supremely absurd, but we can collate from all sources such information as must be of service to the body generally, and we flatter ourselves that we do this with fair completeness. But we must look to good friends all over the world to furnish us with hints and items of value and interest to all.

The necessity of a trade journal need not be insisted upon nowadays. The size of this issue is, perhaps, the best proof that we fill an obvious want. A striking illustration of the value of a trade journal such as this occurred last week in the fourteen reports of legal cases, all of which had a bearing on the chemists' trade. With legislation fencing us around to such an extent as is now the case, it is essential that all engaged in the business should be kept acquainted with their risks and liabilities. This is only one side of our work. We do not wish to enlarge upon it. But we may ask those chemists who do not at present subscribe to this journal to give it a careful examination, and we hope we may also ask those who already do subscribe to help us as far as they can with advantage to themselves, by opening business relations with the firms who make use of our pages.

## DISPENSING FOR DOCTORS.

IF we may judge from the number of inquiries addressed to us in recent months in regard to the arrangements in force between doctors and druggists as to dispensing, there is a growing desire on the part of doctors to relegate to chemists and druggists this part of their practice. Anything which can be done to encourage this must be of general benefit, for as the medical curriculum is now shaped, the training in pharmacy is cut down to a three months' practical course, the greater part of which is devoted to galenic pharmacy, thus making the dispensing of prescriptions a purely secondary matter. In the old days of medical apprenticeships, there was ample opportunity for an efficient training in dispensing, and when the apprentices developed into full-blown practitioners, the dispensing of their own physic came natural to them. At that time, too, pharmacy was a trade without a qualification, and this condition favoured medical dispensing. Now that the position, so far as pharmacy is concerned, is reversed, it has been urged on behalf of chemists that dispensing ought to be entrusted to them. This is a perfectly legitimate demand, and that it will ultimately be granted is highly probable, but as the law allows doctors to do as they please in this matter, and the custom of their supplying their own medicines is so general

in England, the change will necessarily be a gradual one. Nothing can be expected from legislative interference. The direction from which help will most probably come is from doctors themselves and the changed method of their training. Many now starting in practice find it advantageous to associate themselves with chemists and druggists in their locality, and it is doubtless on account of the novelty of the thing that so many of our subscribers ask us how they should act in the circumstances. Three plans are commonly followed. The first is a recognition of the old custom that the doctor must supply the patient with medicine. It may be prejudice, but the fact remains that a large section of the public insist upon getting a bottle of something as a result of a consultation. It is to them the substantial return for the fee. To humour the notion doctors who dislike dispensing write prescriptions, and these are dispensed by a chemist, who charges the doctor. It is mainly in regard to this that we are asked advice. Charges vary according to circumstances. For example, some time ago a correspondent of the *Lancet* advocated a charge of 3d. to 3½d. per prescription where the number of doses does not exceed eight. This is an arrangement which exists and has proved satisfactory to doctor and druggist. It is certainly rather in favour of the former, and we prefer an arrangement wherein specific charges are made for different articles. The following are charges which are in force in some parts of the country:—

Mixtures: 1d. per oz.—minimum charge 4d.

Lotions: Half the price of mixtures.

Ointments: 2d. to 4d. per oz., according to their nature.

Pills: From stock, 2d. per doz.; from prescription, 3d. to 4d. per doz.

Powders: 4d. per doz.

These prices do not provide for expensive ingredients, and if these are prescribed in excess of the scale charges, a good rule is to price at the rate of 2d. per prescription for dispensing, and charge the drugs at a profit of 25 per cent. on the cost. Bottles and pots are in all cases an additional charge.

The foregoing arrangement, though a common one, is not altogether satisfactory for the chemist. It means a great deal of trouble for very little direct profit; but it is an advantage to a business to have one or two doctors send their patients to it for medicine, for other business of a more profitable character is likely to follow. In many instances the arrangement has gradually given place to another more directly profitable to the chemist. This is the system of giving doctors a commission on all prescriptions dispensed. It is not by any means rare, the fact being that its existence is generally kept quiet on the assumption that the arrangement is not an honourable one. From the business point of view it is quite a legitimate undertaking on the part of a chemist to offer to relieve a doctor of his dispensing, and to compensate him by sharing the profits. Such an arrangement is far better pecuniarily for the chemist than dispensing for the doctor at wholesale prices. It helps to foster in patients the desirable belief that the doctor is the person to diagnose and prescribe for disease, and the druggist the person to provide the remedy if it should be a medicinal one. But whatever the advantages of the commission arrangement may be it is distinctly unpopular in the trade, and few but the commercially-minded amongst medical men will listen to any proposal of the kind. There are other ways of recompensing doctors for their co-operation. Thus those who refuse commission may be supplied with chloroform, ergot, and other little medical necessities for use in their practice, while the posting of the account may be postponed *sine die*. This is the third plan which we know to be in use, and it is not

unfrequent in the trade, many chemists having the feeling that an honorarium of some sort is necessary. We shall grow out of that idea in time, doubtless; but meanwhile the fact has to be reckoned with that the old custom of doctors dispensing their own medicines exists, and experience shows that doctors like to be sure of some equivalent for it before they make a change. There are places where the old custom has been entirely superseded by the new one owing to chemists approaching doctors in a business-like way; and in view of the more favourable conditions now existing, chemists should lose no opportunity of cultivating relations with all who commence practice in their localities.

### THE CHOLERA AND CARBOLIC ACID.

ONCE again the cholera epidemic is overlapping the bounds of its Central Asian home, and, spreading ruin throughout Russia, threatens to invade Western Europe. Among the famine-stricken Russian peasantry, the disease finds a congenial breeding-ground, and the panic-stricken efforts of Russian officialdom to cope with its progress are totally ineffective. By any well-organised Government the extreme probability of an invasion of the epidemic, always latent in the countries beyond the Caspian, into the Russian provinces, already decimated by the recent famine, would have been foreseen, and precautionary measures organised. Not so, however, in Russia. Now that the scourge is already within its gates, disinfectants, it is true, are hurried forward from Germany and England by trainfuls and shiploads; but it is quite possible that they will be too late to stamp out the disease, or even to arrest its progress.

It is almost incredible that, with the cholera raging in its midst, the Russian Government should permit the annual fair at Nijni-Novgorod to be held as if nothing abnormal had happened, yet such, it appears, is the case. To this fair, which will shortly open, traders from all parts of Central and Northern Asia and of Eastern Europe repair, and it is thence that large quantities of many Asiatic products, including a goodly quantity of drugs, find their way to the markets of the West. The annual turnover at this fair represents a value of about 20,000,000*l.*, and this fact, no doubt, accounts for the decision of the Government to let it take its course, although exceptional sanitary measures are to be taken in respect to the disinfection of the city and its visitors.

Carbolic acid appears to be the chief, if not the only, disinfectant resorted to by the Russian officials. The Medical Department of State has ordered immense quantities of the acid from abroad, to be distributed at cost price to the local authorities, and it is said that one firm in Berlin received a telegraphic inquiry whether 200 tons of carbolic acid could be despatched at once to the suffering districts.

The first Russian orders for carbolic acid appear to have been placed in Germany, but as that country does not manufacture enough for its own requirements, almost the whole of the increased demand will have to be supplied by makers in Great Britain.

It is, therefore, the English market which has been chiefly affected by the sudden demand, and which is likely to profit most by it. To our manufacturers and dealers the re-animation of the carbolic-acid market has been a most welcome interruption of the unusual stagnancy of trade. The principal run has been upon the various qualities of liquid acid, and in this class of carbolic the rise has been very rapid, parcels which, six weeks ago, were being hawked

about in vain for 8½*d.* per gallon readily realising 1*s.* 4*d.* per gallon last week. Crystals have not advanced in quite the same proportion as liquid acid, but they also show a decidedly higher value, 4½*d.* per lb. having been paid already for 34–35°, while for 39–40° 5½*d.* per lb. has been conceded, and manufacturers are unwilling to sell anything more of this kind below 5½*d.* per lb.

The weak point in the position of the article is that the demand is limited to the summer months, and that no one believes that the figures now quoted can be maintained beyond the end of September. Before the present scare set in, carbolic acid of all descriptions had fallen to prices lower than had ever before been recorded, and several makers had ceased manufacturing. But they all have their plant ready to start again as soon as there is a prospect of better times, and the higher the present rise in prices, the sooner, therefore, will over-production set in again. The synthetic carbolic acid which was placed upon the market by a German firm of aniline-dye manufacturers a few years ago, and looked upon for awhile as likely to become a serious competitor to the coal-tar acid, has receded into obscurity, and not much is heard of it now in commercial circles. It was good, but much too dear. It is still possible, however, that it might make its reappearance under more favourable market conditions and prevent the coal-tar product from rising beyond a certain point.

Although the superiority of carbolic acid as a disinfectant has frequently been challenged, there is no doubt that it continues to hold the first place in popular favour, and no other disinfectant is so liable to sudden demand and rise in value. Within the last fifteen years there have been, at intervals, regular runs upon it during the summer months. Its price has been seriously affected in turns by yellow-fever epidemics in America, and by cholera epidemics in Japan, the East, Spain, and Russia. When any sudden demand sets in during the summer (which is also the season when the output is the smallest), it is no unusual thing to witness an advance in price of 50 or 100 per cent. within a couple of weeks; but it happens very rarely that this increase is prolonged beyond the autumn. In 1879 there was a sudden and somewhat sustained rise, as a result of an unusual demand from America and the far East. In 1884 the occurrence of cholera in the south of France, and in 1885 the fear of a renewed outbreak, caused prices to double within a few weeks. In 1886 there was a fresh recovery in price, which continued slowly until the spring of 1887, when carbolic had reached three times the value of its lowest point. Then came a good time for the manufacturers. The French Government set about to manufacture melinite. One of the principal ingredients of that explosive was picric acid, about two-thirds of which is carbolic acid, and the quantity of carbolic thus consumed was enormous. We cannot give reliable statistics to show even the approximate quantity of carbolic acid consumed in the manufacture of melinite, but some idea of it may be formed by the figures showing the increased imports of carbolic acid into Germany when the German Government followed the French in using the drug as an ingredient in the manufacture of its war-material. Previous to 1888 Germany imported from 800 to 1,000 tons of carbolic per year, in 1888 she took 1,200 tons, in 1889 2,400 tons, and in 1890 1,900 tons—the excess being all used, it is believed, in the manufacture of explosives. Since 1890 the continental demand has been decreasing rapidly, and the English makers, no longer able to dispose of their output abroad, have gradually been compelled to throw their surplus stock upon the home market. It is estimated that the total quantity of coal-tar converted into various commercial products is

about 820,000 tons per annum, of which over 600,000 tons fall to the share of this country, while France produces nearly one-half of the residue. Assuming that the production of carbolic acid is about one-twentieth part of the weight of the coal-tar converted, its total output in Europe would be about 41,000 tons a year, of which more than 30,000 tons are produced in this country.

### CHEMISTS AND PHOTOGRAPHIC GOODS.

It is now accepted on all hands that a large part of the business of retailing photographic materials should be in the hands of the chemist. This is especially the case in the provinces. In London there are large emporiums where every kind of photographic apparatus and material may be purchased. Even these are not numerous, except that since the very successful formation of the Camera Club there has been a growing tendency for the larger dealers to go westward. Within certainly a radius of a mile and a half from the Club will be found the establishments of all the leading houses of this character. Outside this circle the dealers in photographic material are few and very far between.

The enormous advance in photography amongst amateurs makes it imperative that the articles of everyday requirement—such as chemicals, plates, and paper—shall be obtainable near home. In London alone there are now some forty photographic societies, whilst in the provinces no town of fair size and reputation can be found without such a society; and in every place, whether large or small, workers in numbers are sure to be found.

This growing popularity of photography as an art cultivated by amateurs makes it yearly more and more incumbent upon chemists to cater for photographers. The profits are considerable, and the wholesale houses will be only too glad to offer terms. It may not be wise for any but chemists with special opportunities to hold large stocks of apparatus, but it is to the benefit of the body generally that all should keep an assortment of chemicals required by photographers for making-up developers, toning-baths, &c. Developing-agents—such as pyrogallol, hydroquinone, eikonogen, rodinal—these may with advantage be made up ready for use or sold in a concentrated form, and, if properly pushed, will become a source of considerable revenue. In stocking dry plates, it is well not to attempt to keep all brands, but to select one or two well-known plates, and keep a small stock up to 10 × 8 size, and never allow the stock to run out. In printing-paper it would be well to have packets at uniform prices, varying *not the price* but the number of sheets, as the Eastman Company do with their new gelatino-chloride paper, made up in sizes and packed in specially labelled light-tight envelopes. The special papers issued by the Ilford Company—bromide, alpha, and the new gelatino-chloride printing-out paper—will find a ready sale as packed by them. The bromide paper of the Eastman Company and their gelatino-chloride paper are sure to go well. Then there is that excellently prepared paper supplied by the Platinotype Company, and their special developing solutions, for which there is a large call all over the Kingdom—quite a safe stock in small quantities. The Blackfriars Sensitising Company make a first-class albuminised paper, and their well-known "Celerotype" paper, which gives admirable results. In addition to these there is Jacoby's paper, sold by O. Schözig, and his high-quality albuminised paper, Aristotype and Obernelter, both gelatino-chloride papers well known. All these are advertised extensively by the makers, but it is for the chemist to stock in small quantities, and to build up a

local connection. In apparatus a judicious selection of cheap goods, photographic kits ( $\frac{1}{4}$  and  $\frac{1}{2}$  plate size for beginners), hand cameras which retail at from 10s. 6d. to 2l. 2s., tripods, cases, developing-dishes, graduated glasses, scales, rockers, ruby mediums for covering-up windows, photographic books and journals—all these are in everyday demand. A part of the shop-window may with advantage be set aside for showing goods; the wholesale houses will supply showcards, specimen photographs, &c., which will help to brighten up the show, and a new branch will be added which has proved in many instances most important.

That it is worth while to meet local demands by keeping a fair stock of plates, papers, and chemicals, is unquestioned. But no chemist must expect to make a very appreciable addition to his income by nibbling at the trade in this way. Like every other department, this one, if it is to be developed into something of real value, demands knowledge, judgment, and courage to invest—to speculate is, perhaps, the better term. In localities where there are a good many resident photographers, or which are often visited by tourists, the investment ought to be worth making. But it must be on a fairly large scale. A good varied stock which will tempt the modern amateur means 200l. to 300l. planked down. It requires suitable space, and it wants to be managed by a man who is practically acquainted with both the art and science of photography. Given the right man, and the right place, the investment ought to bring in some 20 per cent. at least, which compares favourably with Consols.

### INSUFFICIENT CAPITAL.

In a bankruptcy case reported by us last week, a chemist and druggist in Wandsworth appeared to have been carrying on business with "stock-in-trade, cost 18l., estimated to produce 4l.; trade fixtures, fittings, &c., estimated to produce 1l.; furniture, valued at 8l.; book-debts, good, 7l. 11s., doubtful and bad, 33l. 4s. 9d.—estimated to produce 1l. 10s." The chemist's total assets were returned at 35l. 1s., and this sum included 13l. cash deposited with solicitor for costs of petition. As a special reason for the failure the debtor gave "the long illness of his wife."

We know nothing about this case, and the debtor has yet to be examined; but, on the face of it, what a melancholy picture these figures reveal! The bankrupt had started in business without any capital seven years ago, and had struggled along—hopelessly enough, we should think—all the time.

Glancing back at the failures of chemists reported this year, we find almost invariably that the debtors commenced business with a little borrowed money or with next to no capital. One had 7l. 10s. of his own, another 30l., another 40l. or 50l., one had 140l., and another 250l. Two state that their fathers gave them some money to start; but in almost all cases they have borrowed from friends and relatives. In view of the many instances we read of of men making great fortunes after starting with the traditional half-crown, it would be rash in the extreme to recommend hopeful young men never to start for themselves until they had a respectable capital to work with; but we would strongly urge them to be very sure of their ground before they begin on borrowed money.

### COMMENTARY.

RADICAL OR RADICLE.—There are two ways in common use of spelling a word which seems to be going out of fashion in chemical literature, although its meaning is sig-

nificant enough and the word itself is useful. We mean the *radicle* of Watts's Dictionary, Fownes, Tilden, and Miller; but Attfield, Dupré and Hake, Kolbe-Humpidge and Roscoe, have it *radical*. Which is it? We were inclined to give preference to *radicle*, on the supposition that, the signification of the word was "a little root," but the matter having come before us for decision in proof-reading, we find that authorities, so far as we have referred to them above, are at variance, and that the true origin of the term is to be looked for not in "a little root," but in the more expressive adjectival expression "serving to originate." In this sense, according to Brande, it is "the base, as applied to acids, as sulphur is the radical of sulphuric acid." Prof. Attfield, who is generally precise in matters of nomenclature, says "elements are termed *radicals*, each being the common root (*radix*) in a series of salts." Also, that "a few modern authors term these roots *radicles*, a word more usefully expressive of little roots or rootlets." The fact that *radicle* is still used in several of the best text-books shows that the matter has not had the attention which it deserves, and it would be well if we had an attempt at uniformity in the matter. We are for *radical*.

**FLOWER-FARMING IN VICTORIA.**—If the Victorians do not succeed in establishing perfume-farming firmly upon their soil, it will not be for the want of energy in trying. The Government scent-farm at Dunolly, to which we have already referred more than once, appears to be progressing satisfactorily, and to be appreciated by agriculturists for the information it disseminates. A correspondence upon the subject of flower-growing for perfumery purposes also breaks out at intervals in the columns of the Australian journals. In the *Melbourne Age* of July 24, Messrs. Blogg Brothers, perfumers, of Melbourne, call attention to the result of their experiments in flower-farming. Their experience, they say, leads them to the firm conviction that boronia and tuberose are the most prolific in flowers, the most easily treated, and the most saleable to the manufacturer when produced. The process they found most suitable, both for economy of labour and for obtaining the best results, is that known as "enfleurage" with olive-oil, prepared fat being too liable to turn rancid in the hot Victorian climate, and requiring a great deal of technical skill in its preparation. "For ourselves," Messrs. Blogg Brothers say, "we are steadily pursuing the policy of employing Australian-grown products in our manufactures of perfumery. Tuberose grow to better advantage in Victoria than elsewhere, and yield an abundant crop even in the first year. The scented oil is largely used as a base for other perfumes, and as an adjunct to the farming occupation its production can be safely recommended. The boronia will be found the most persistent of any flower-perfume ever produced, and the sale for it in foreign markets—as a purely Australian product—ought to insure it a permanent footing as a colonial industry." Meanwhile Indian pommade is also being imported into Europe in increasing quantities, and it is clear that the South of France people will have to recognise and respect their rivals before very long.

**THE ORCHILLA-TRADE.**—The United States Government has instructed its consuls in districts where orchilla-weed is collected to furnish particulars concerning the trade in that article. Several representatives have already sent in their replies, some of which contain interesting bits of information. Consul Viosca, of La Paz, Lower California, reports that in 1853 the discovery of a very superior variety of orchilla lichen on the Galapagos Islands, off the coast of Ecuador, created quite a sensation in the trade. Nineteen

years later, in 1872, the master of an American whaling-vessel, Mr. John Howard, discovered a new variety of orchilla, similar in quality to that of the Galapagos Islands, along Magdalena Bay, in Lower California. The news of this discovery soon spread, and ere long a fleet of vessels was landing orchilla-fishers all along the shores of the bay. A thriving industry grew up and lasted for several years, when a Mr. I. P. Hale, having obtained a concession of the entire belt of orchilla-lands from the Mexican Government, dislodged the whole of the other collectors and established a monopoly. Over three thousand men are employed in the orchilla-industry in California. The cost of placing orchilla upon the market in California is 43½ Mexican dollars per 2,000 lbs. The plant matures every two years. Upon the Canary islands about 120 tons of orchilla are gathered every year and sent to Lishon. The cost of the drug to the exporter in the Canaries is estimated at 4½c. per lb. The lichen is plentiful throughout the islands, but difficult to obtain, as it grows by preference on the steep banks of precipices. On the Galapagos Islands the cost of orchilla is from \$8 to \$9 per quintal, export duty included. About 2,000 quintals are gathered annually now, the demand for the dye having greatly fallen off.

**WE ARE NOT GOOD SAILORS.**—The airs assumed by "good sailors" on ocean and Channel passages, their assurance that they "enjoy the motion," that they "never miss a meal," and the like, as they tramp around the couches where their helpless fellow-voyagers lie prostrate, have often stirred the powerless passion of Neptune's victims. There is a sweet morsel of revenge for the long-suffering ones in a letter in last week's *British Medical Journal*, by Mr. Arthur Stradling, M.R.C.S., who says he has travelled some half-million miles on the great passenger-steamers, and the one fact which he finds to be constant in regard to sea-sickness is "that persons affected with any form or degree of mental aberration are immune from the malady." He has compared notes with other sea-going surgeons, and finds that they have noticed the same thing. This is cheerful news indeed. When we next make for Calais or Ostend we shall hug the basin with the proud consciousness that it is the outward and visible sign of our intellectual superiority, and we shall measure at its correct value the self-satisfied smirks of those mentally aberrated passengers who have hitherto been the crown of our sufferings.

**SULPHURETTED-HYDROGEN INSANITY.**—The idea that insanity can be produced by the inhalation of sulphuretted hydrogen is somewhat alarming to those who spend days, weeks, and months in laboratories the atmosphere of which has been more or less contaminated with it. Dr. J. Wigglesworth, Medical Superintendent of the Rainhill Asylum, gives, in the *British Medical Journal*, particulars of two cases which have been under his care there—one, a man of 30, in whom the insanity lasted for upwards of a year, and the other, a man of 32, who was insane for five months. These men were "gassed" in alkali-works with sulphuretted hydrogen. There was no history of insanity in their families. Although Dr. Wigglesworth says it is very unusual for lasting or permanent effects to be produced by the gas upon the nervous system such as come under the designation of insanity, it does not appear to him matter of surprise that such effects should at times occur. That the gas has powerful narcotic properties is evidenced by the rapid insensibility it produces when inhaled in any quantity. Cases have been recorded by Savage and others in which insanity—generally taking the form of mania—has resulted from the inhalation of chloroform, ether, nitrous-oxide gas, and other similar agents, and the

cases described as produced by sulphuretted hydrogen seem to fall into line with these.

**WELDON MUD.**—Mr. Bernard Cail, of Gateshead, sends an interesting letter to the *Engineer* in regard to a personal experience of his own, showing how waste products in the chemical trade become of use when properly studied. The experience is a chapter in the life of Walter Weldon, who at first was a literary man. His publisher failed, and he was in poverty and bad health, and was not allowed to pursue his profession, and to divert his mind he took to chemistry. By-and-by he came to examine the manganese residue from chlorine stills, and conceived the idea of re-oxidising this residue or mud. He took out a patent for his process, and sold a part of it to people whom he had induced to believe in it. Newcastle chemical manufacturers had no faith in it or him. He called on Mr. Cail, who thought it feasible. Weldon had then never been in a chemical-works. Mr. Cail was an engineer and contractor and had built several large chemical-works, and only had a limited knowledge of chemistry. His partner was T. Bell, brother of Sir (then Mr.) Isaac Lowthian Bell. Neither Mr. T. Bell nor Mr. William Lash, then about ninety years old, looked upon the Weldon process favourably; and the same with Mr. Isaac L. Bell, who said it was against nature, and could not be done. These circumstances made it unpleasant for Walter Weldon and Mr. Cail. They experimented for some time and expended about 1,500*l.*, when it was voted a failure and given up, and Mr. Weldon took his patent to Widnes, where a more congenial manager, under Colonel Gamble, carried it out to perfection. Mr. Weldon had to part with nearly all his interest in the patent, and suffered dreadfully from the want of sympathy during the experiments which were made. This was the first great change in the alkali-trade from the Le Blanc process, brought from France to Walker by the before-named William Lash, at the termination of the great war. Previous to Mr. Weldon coming on the scene Mr. Cail had made a solution from the waste and took a small phial of it to London to disinfect the sewage the year the Thames was so foul, which it did perfectly, but nothing came of it. The changes made since the Weldon process have been numerous, and caused many works to be given up and dismantled; the first-established Walker Alkali-works being one. The first change after Weldon's process was making hydro-sulphate from soda or tank-waste by a patent taken out by Mr. S. Lash, a nephew of the original Mr. William Lash, reducing the price from 1*s.* per lb. to 16*d.* per ton, since to 5*d.* In the old Walker books soda was sold for 50*d.* per ton, now it is 2*d.* or 3*d.*

England will note that the pint and quart mentioned in many of the formulæ are those used in the United States—viz., 16 oz. and 32 oz.

*Watts's Dictionary of Chemistry.* By H. Forster Morley, M.A., D.Sc., and M. M. Pattison Muir, M.A., F.R.S.E. New edition. Vol. III. 8vo. Pp. 868. London, 1892: Longmans, Green & Co. 2*l.* 10*s.*

BEGINNING with "indigo-carboxylic acid," the editors carry on their monumental work in the present volume to "phenyl-tetrazole carboxylic acid." The volume is 8*s.* dearer than the first two, as it contains nearly 100 pages more matter. On the inorganic side of chemistry we have in this volume such elements as iron, lithium, magnesium, mercury, nitrogen, and oxygen treated; and on the organic side methyl, paraffins, oxy-organic compounds, and phenols alone form a collection of material which only time can prove the true value of. The great bulk of the work falls upon the editors, and several clever young chemists who act for them as abstractors; but the present volume, like its predecessors, is distinguished by a number of special contributions which may yet take rank as historic monographs in chemical literature. The following are the articles of note now printed:—

ISOMERISM, by Professor H. E. Armstrong, Central Institution.  
PERIODIC LAW, by Mr. Douglas Carnegie.  
RARE METALS, by Mr. William Crookes, F.R.S.  
LIGNONE, by Mr. C. F. Cross.  
MINERALOGICAL CHEMISTRY, by Mr. L. Fletcher, British Museum.  
MILK and MUSCLE, by Dr. W. D. Halliburton, King's College.  
METALLURGICAL CHEMISTRY, by Professor A. K. Huntington, King's College.  
ISOMORPHISM, by Dr. Arthur Hutchinson.  
KETONES and LIPIDEX, by Professor Francis R. Japp, Aberdeen.  
PARAFFIN and PETROLEUM, by Dr. Samuel Rideal.  
OZONE, by Mr. W. A. Shenstone.  
PENTINENE, by Professor William A. Tilden.  
THEORIES OF MOLECULAR CONSTITUTION OF BODIES, by Professor J. J. Thomson.

Anything in the nature of criticism of these articles is impossible in the limits of a brief review, but we may call attention to those by Professor Armstrong, Mr. Crookes, and Dr. Halliburton. It was possible to make the first-mentioned monograph a very dull affair, and to ignore the work of men who were writing on isomerism a quarter of a century ago, since the researches and speculations of more recent times have somewhat overshadowed the earlier work. Happily, the catholicity of Professor Armstrong's mind has given us a really exquisite exposition of a most difficult subject, in which the evolution of modern isomerism is admirably conveyed. The milk article is a good one, in which greater regard than usual is given to the physiological side of the subject. Of course, the whole of the articles are not of equal merit; but they are all in line with present-day theories and knowledge. We have put the general text to test by frequent use during the past two months, which, after all, is really the only way in which such a bulky and comprehensive volume can be judged, and on no occasion have we been dissatisfied with the contents. The work has been thoroughly and intelligently done, and the editors are apparently determined that the Dictionary shall retain its place in chemical literature as one of the best books of reference. But why do they spell Mendeléef's name both ways—Mendelejeff and Mendeléef? He uses the latter form.

## ❁ REVIEWS ❁

AND

### LITERARY NOTES.

*Perfumes and their Preparation.* By George William Askinson, Dr.Chem. London, 1892: E. & F. N. Spon. Large 8vo. Pp. viii. + 312. 12*s.* 6*d.*

THIS is an American translation of Isidor Furst's German work, by a manufacturing perfumer who has been fortunate in having Dr. Charles Rice associated with him in editing. Consequently, the book is remarkably free from the technical blunders which mar so many works of a similar character. It fairly covers the whole field of perfumery and toilet preparations, describing the collection and manufacture of the crude materials required in the recipes, which are numerous and of a practical character. We can recommend the book for use by chemists and druggists, but those in

*Materia Medica, Pharmacy, Pharmacology, and Therapeutics.* By W. Hale White, M.D. London, 1892: J. & A. Churchill. 12mo. Pp. vi. + 614. 7*s.* 6*d.*

THE author of this volume is lecturer on materia medica and therapeutics at Guy's Hospital, and is the author of a text-book of general therapeutics and of many papers on therapeutic subjects. In compiling the present volume he has apparently had in view a book of the nature of Dr. Lauder Brunton's well-known volume, but much less ambitious in detail and extent. Pharmacy forms a subsidiary part of it, consisting mainly of definitions with explanations and groupings of B.P. preparations, the whole taking up two dozen pages. Following this are nearly 100 pages in

which pharmacology and therapeutics are treated. In this section there is a chapter on prescribing, but it is the actions of the various classes of drugs which comprise the major part of the section. These are described in very instructive fashion, and apparently with the intention that students may obtain an intelligent grasp of the subject. Following this pharmacopœia inorganic and organic materia medica are treated in natural groups, the pharmaceutical portion, dealing with the preparation and characters of galenicals, being treated much more carefully than is usual in text-books; following this the action, therapeutics, and, where applicable, the toxicology of each drug are adequately discussed. In an appendix non-pharmacopœial remedies are treated in the same manner. There is a comprehensive index of the whole. It is a pleasure to handle such a book as this, for, in addition to its being of a size enabling it to be carried in the coat-pocket, the typography is clear and varied in such a way as to give prominence to important sections; and the binder has given a plain but elegant finish to the volume.

We take it that the book has been written for medical students, for in style it is well suited to their requirements; but it may also be read and used with profit by chemists and their assistants, since it describes, without too minute physiological detail, recent knowledge of the action of medicines, and the best manner for administering them in specific diseases, thus being of assistance in prescribing.

*Kemp & Co's Prescriber's Pharmacopœia.* Bombay and London: 1892. 32mo. Pp. xx. + 429. Rs. 2.8.

A REPRINT of the second edition of this Pharmacopœia, which was reviewed in these columns last year, has recently reached us. Apparently the greatly improved character of the work has met with approval, for the edition was exhausted within six months. The reprint is issued in limp cloth binding.

*The Amateur Photographer's Annual.* London: Hazell, Watson & Viney (Limited). 2s.

AMATEUR photographers are surely the pet children of journalism. They are most lavishly and cheaply catered for in this and other countries, and this volume just published surpasses, we think, any previous effort. It is a handsomely-bound book, contains over four hundred pages of literary matter, including an excellent summary of progress, a gazetteer of Great Britain for the amateur camerist, showing where plates, chemicals, and dark-rooms can be got, and often indicating interesting points for pictures, several original articles, and some hundred or more very interesting reproductions of scenery or studies. This makes the work attractive to readers who know nothing of the Black Art.

MESSRS. WILLIAM COOPER & NEPHEWS, of Berkhamsted, whose acquaintance with sheep must be "extensive and peculiar," have just published a very useful treatise on "Sheep-farming," which they sell at 1s. They give excellent illustrations of the principal varieties of sheep, discuss feeding, breeding, and shepherding questions generally, describe concisely (perhaps a little too concisely) the treatment of the ordinary diseases to which sheep are liable, and append a chapter on "Colonial Sheep-farming." There is a great deal of good original work in this treatise, and chemists with a connection among farmers might undertake the sale of it with advantage.

A SEVENTH EDITION of Martindale and Westcott's Extra Pharmacopœia has been lately published by Mr. H. K. Lewis, of 136 Gower Street. There has been an interval of two years between the publication of the sixth and the seventh editions of this popular work and through the progress of pharmacology, and largely in consequence of the introduction of new synthetic remedies, the authors have had to make over 300 new entries in their index. In this department, and in that of noting new uses for older medicines, the Extra Pharmacopœia is kept well up to date. The British Pharmacopœia "Additions," the third German Pharmacopœia, and a new Guy's Hospital Pharmacopœia are abstracted in this work.

## NEW COMPANIES.

**SILICATE PAINT COMPANY (LIMITED).**—Capital, 100,000*l.*, in 5*l.* shares. Object: To acquire the business of manufacturers of and dealers in silicate paint and other paints and articles now carried on at Charlton, Kent, at one time by the Silicate Paint Company, and afterwards by J. B. Orr and others, and to deal in paints, colours, oils, chemicals, drugs, &c. There shall, in the first instance, be four directors, and the first are:—Major-General W. B. Barwell, F. S. Hunt, E. Masson, and R. E. Robertson-Ramsay. Qualification, 50*l.*; remuneration to be determined in general meeting.

**GORDON MURRAY & Co. (LIMITED).**—Capital, 10,000*l.*, in 1*l.* shares. Object: To carry on business as patent-medicine manufacturers, chemists and druggists, surgical and medical instrument dealers, &c., and to acquire the business of Gordon Murray & Co., and to develop and extend the same. The first subscribers (who take one share each) are: J. W. Wootton, 32 Stockwell Green, Surrey, clerk; C. de St. Croix, 12 Savoy Buildings, Strand, retired army officer; S. H. Smith, 6 Larcom Street, Walworth Road, printer; J. Gravestock, 14 Cologne Road, New Wandsworth, foreman; A. C. Hinds, 28 Duke Street, W.C., clerk; D. Early, 70 Stamford Street, housekeeper; and T. Young, 18 Dalryell Road, Stockwell, agent. There shall not be less than three nor more than seven directors, the first are to be elected by the signatories to the memorandum of association. Qualification: 100*l.*. Remuneration, 50*l.* per annum, divisible. Registered office: 10 Adam Street, Strand, London.

**JOHN BUCKLEY MINERAL-WATER AND BOTTLING COMPANY (LIMITED).**—Capital, 1,500*l.*, in 5*l.* shares. Object: To acquire the business of a mineral-water manufacturer, hitherto carried on under the style of John Buckley, at Ancoats, Manchester, and to develop and extend the same. The first subscribers (who take one share each) are:—T. M. Cairns, Ardwick, innkeeper; T. A. Dunn, Oxford Street, Manchester, innkeeper; J. C. Emerson, St. James's Theatre, Manchester; G. Kitson, Scotch Hotel, Great Ancoats, innkeeper; J. George, 48 St. Andrew Street, Manchester, beer-dealer; J. F. Kitson, 21 Mather Street, Manchester, publican; and J. E. Hornby, Ryecroft, Ashton-under-Lyne, agent. There shall not be less than three nor more than seven directors. The first are T. M. Cairns and six others. Qualification, 25*l.*. Remuneration to be determined by the company in general meeting.

## Trade Notes.

MESSRS. LORIMER & CO are issuing a new edition of their cleverly-written pamphlet on modern medicines, in which they describe the various specialities prepared by them. They state that in 1891 they sent out six million bottles and packets of medicine.

THE Jeyes' Sanitary Compounds Company (Limited), 43 Cannon Street, E.C., are issuing very neat little envelope sized pamphlets on "Lano-Creolin," explaining the composition and virtues of this compound of creolin with lanoline, which they manufacture.

NOTHING nicer or purer in the way of sweets can be made than the "fruit tablets" of various flavours manufactured by Mr. James Pascall, of Valentine Place, Blackfriars Road. They are put up in square glass jars with screw capsules. In that style they are well suited for chemists' sale.

MESSRS. F. NEWBERRY & SONS invite proprietors of patent medicines to tell them, for indication in their next catalogue, whether they label their preparations as poisons, or whether no scheduled poison is contained in the article. It will be very convenient to have this information clearly stated in the catalogue.

CHEMISTS thinking of embarking in the homœopathic-medicine business should study the four pages of advertisements published in this issue by Messrs. Keene & Ashwell, of

74 New Bond Street, who give illustrations of the show-cases which they supply, with opening orders, and also indicate the profit which the sale of these medicines bears.

MESSRS. F. C. CALVERT & Co., of Manchester, are bringing out a number of new soaps for chemists' sale, to which they direct attention in their advertisement. These include a combination of carbolic acid and sulphur, a fuller's-earth soap, a pumice-stone soap, and a petrofenic soap for the hair. They supply effective showcards with these.

MESSRS. F. NEWBERRY & SON have been appointed sole agents in Great Britain for several of the dietetic and medicinal preparations manufactured by Messrs. Reed & Carnrick, of New York. These include kinnyogen, lacto-cereal food, lacto preparation, and pancrobin preparations. They have sent us samples of these, and we shall report upon them later.

MR. H. SILVERLOCK brings under our notice a large number of labels of new design and text for most of the proprietary articles in ordinary sale on the chemist's counter. These labels, we understand, are all new within the past two years. They seem to us to be very skilfully worded, and the designs are in most cases admirable. Small lots of these stock labels are supplied with the chemist's own name printed on.

MESSRS. BLONDEAU ET CIE. have brought out "Flora Vinolia" soap in grey boxes lettered in silver, each holding three tablets, and retailing at 1s 6d. They will supply the tablets in single cartoons as formerly, but as it is often as easy to sell a box of soap as a single tablet, chemists will no doubt greatly prefer the "Floral Vinolia" soap in boxes. The boxes are lined in pink, and are in every way quite in keeping with the other "Vinolia" preparations.

MESSRS. BURROUGHS, WELLCOME & Co. inform us that they are now willing to sell outright to chemists their showcases for 10%. This is less than half the price that the firm paid for these cases when they were first brought out; but the cases have become so popular now, and the demand so great, that the cost of production has been substantially reduced. In a letter to us, Messrs. Burroughs, Wellcome & Co. say that, although they have now sent out to different chemists some hundreds of these cabinets and desks, only one or two have been returned, and they have letters from many chemists stating that these form the handsomest piece of furniture in their pharmacy. The dimensions of the cabinet and showcase combined are 4 feet high, and 20

inches wide and 20 inches deep. The size of the cabinet and doctor's desk is the same, except to the top of the standards of the desk it is 5 feet 4 inches high. It is the latter that we illustrate.

MESSRS. FLETCHER, FLETCHER & STEVENSON offer a prize of 10 guineas for the best half-dozen specimens of mixtures for simple ailments prepared from their "Concentrated Liquors." The competition is doubtless intended as an object-lesson in the special adaptability of the liquors for chemists' proprietary remedies. There can be no question that in a large number of such mixtures the proportion of spirit introduced in the form of tinctures, &c., is needlessly excessive. If, therefore, by the substitution of the "Concentrated Liquors" economy in this respect is effected without any sacrifice of therapeutical efficacy, the competition will yield instructive and useful results. Conditions are stated fully in Messrs. Fletcher's advertisement.

MESSRS. F. ROSENTHAL & Co., of 47 Minories, are bringing before chemists in this journal their penny packets of "Grace Darling Memorial Starch." We do not know exactly why the name of Grace Darling should be specially associated with starch, but her name and heroism are certainly well worth keeping in mind by any means in this sea-girt island. To that end the popular journalist "Dagonet" has advocated a national memorial to be raised to her on the occasion of the fiftieth anniversary of her death, which will occur on October 20 next. In their circular issued with this number Messrs. Rosenthal & Co. reprint "Dagonet's" article, and undertake themselves to contribute 500*l.* to such a memorial in the form of a life-boat or some other foundation if (this seems a rather large "if") they can sell eighteen millions of their penny boxes of starch before the end of this year. They point out that starch is not an article universally sold by chemists, who can, therefore, if they will, by taking up this business, add to their own profits and help in glorifying the memory of one of the bravest of Englishwomen. The packets of starch contain the record of her heroism, and it is expected that Englishwomen will have pleasure in assisting this memorial.

THE proprietor of "Singleton's Eye Ointment," Mr. Stephen Green, of 210 Lambeth Green, is putting up his very well tried remedy in a somewhat new form. The quaint old pots are still used, but they are not now wrapped up in the old handbill with which they have been heretofore enveloped, and they are now supplied in half-dozen boxes for counter display, as shown in the engraving. "Singleton's Golden Eye Ointment" is, perhaps, the oldest proprietary remedy which is still in popular sale. According to a history of the article which is set forth in a little booklet recently published, it was first made known in the year 1596, in the reign of Queen Elizabeth, by a Dr. Johnson, of Vauxhall. Dr. Johnson bequeathed the recipe to George Hind, who left it to his son William. William Hind's daughter married a Thomas

Singleton, and it was their grandson, William Singleton, who first pushed the article extensively. From him it came to his only child, Selina, who married Timothy Folgham. Their daughter Selina married Mr. Stephen Green, and took a fifth share of the property to him as her marriage portion. The other shares were held by her brothers and sisters. Stephen Green bought up the rights of the other children, and became sole proprietor. He died in 1874, and the business is now in the possession of Mr. Stephen Green, his grandnephew and namesake. The pamphlet from which we have obtained these curious particulars has been compiled by Mr. F. W. Sears, advertisement contractor, of 138 Fleet Street. It is effectively got up, and, we presume, is offered to chemists for circulation. Mr. Sears, who aims to cultivate an advertising connection with chemists and medicine advertisers, informs us that, besides undertaking the advertising of "Singleton's Eye Ointment," he at present has commissions for arranging and publishing advertisements for Messrs. Hockin, Wilson & Co., Corbyn, Stacey & Co., Oppenheimer & Co., The Anteczema Company, and Johnson & Co., the tea merchants.

## Legal Reports.

### QUININE BITTERS COMPANY (LIMITED) v. DAVIES.

In the Chancery Division of the High Courts of Justice, London, on Friday last week, before Mr. Justice Stirling, the motion at the instance of the Quinine Bitters Company (Limited), Llanelly, to restrain by injunction until the trial of the action or further order the defendant, John Davies, chemist and druggist, 30 High Street, Swansea, from infringing the plaintiff company's trade-mark and from selling the quinine bitters manufactured by him as or for the goods of the plaintiffs, again came on for hearing. As was reported in our last issue, his Lordship decided that he could not, on the evidence before him on this motion, regard the matter as one of infringement; but he indicated disapproval of the following words at the foot of the defendant's label:—"Prepared at the Quinine Bitters Manufactory, Swansea," as too closely resembling the words in a similar position on the plaintiffs' label, "Prepared by the Quinine Bitters Manufacturing Company (Limited), Llanelly." To enable the defendant to consider what change he would be prepared to offer, the motion stood over for a week. On being reached on July 22,

Mr. Buckley, Q.C., for the defendant, said that after his Lordship's suggestion the solicitor for the defendant wrote to the plaintiffs repeating what he had said on June 2, that his client, to avoid litigation, would make any reasonable alteration on the labels or bottles. He had drafted a new label, which he submitted. If the alteration were approved, he was prepared to cease using the old label and to bear his own costs in the action. The proposed label would have at the head simply the words "The Welsh" before "Quinine Bitters"; then, "a favorite tonic, purely vegetable," which effectually altered the form; and, as regarded the matter principally dwelt upon, it was proposed to substitute these words: "Prepared only at the Welsh Quinine Bitters Laboratory, Swansea," and at the foot, "Ask for Welsh Quinine Bitters." In reply to that offer his client received a letter from the plaintiffs' solicitors stating that the plaintiffs did not think the defendant could be serious in asking them to entertain the new label which had been suggested; that the new label was as much an infringement as the other; that passing off would certainly occur, and that they thought, when his Lordship saw the alteration, he would take the same view. The plaintiffs' solicitors followed that letter by another, dated July 20, in which they said that their clients wished, if possible, to avoid litigation, and desired to refer the defendant's labels to two gentlemen as arbiters, with the leader of the Chancery Bar as umpire. Mr. Buckley submitted that the alterations suggested by his client met all the objections in the case.

Mr. Graham Hastings, Q.C. (for the plaintiffs), said that the defendant's offer was a compromise; and the plaintiffs had made an offer, which the defendant had refused.

Mr. Buckley said they certainly refused to do what was suggested by the plaintiffs, but he was willing to do anything reasonable. The plaintiffs did not say, even now, what they wanted. They did not say it in June, when the defendant offered to do what was reasonable. The defendant had shown a *bona-fide* intention to meet the reasonable wishes of the plaintiffs; and now he simply invited his Lordship's judgment on the motion.

Mr. Ashton Cross (with Mr. Buckley for the defendant) argued that the only question was, "Was the defendant's label so made up that an ignorant person would mistake the defendant's preparation for the plaintiffs'?"

His Lordship: Do you represent your preparation to be made at the "Quinine Bitters Manufactory"?

Mr. Ashton Cross: Yes.

His Lordship: The plaintiffs' preparation is "Prepared by the Quinine Bitters Manufacturing Company." Is not that calculated to deceive?

Mr. Ashton Cross submitted that it was only a very small portion at the foot of the label, which otherwise was wholly different in colour and in composition. Anyone, whether he could read or not, could see in a moment the various differences in colour and design on the label. In the plaintiffs'

first letter they said their trade-mark was infringed. The defendant, in his first letter, said he would be happy to make an alteration, and as soon as his Lordship made the suggestion they proposed an altered label.

His Lordship: I do not think your alteration meets the point. What I should want would be an undertaking from you to discontinue the use of the words "Quinine Bitters Manufactory," or anything like that. Call it something else—"Dnical Laboratory." Why "Quinine Bitters"?

Mr. Ashton Cross: Because that is the stuff we are making.

Mr. Buckley: But we are quite prepared to do what your Lordship suggests.

Mr. Ashton Cross said that with regard to putting the defendant's name on the labels there was a great difficulty, because there were five "John Davieses" chemists in Swansea. (Laughter.)

His Lordship: Is that the difficulty? I thought it was that other chemists would not sell it if the name of the manufacturing chemist was there.

Mr. Ashton Cross: Yes, that is another reason.

His Lordship: If you will undertake to discontinue the use of "Quinine Bitters Manufactory" on the label, I think, on the present stage, it ought not to go further.

Mr. Ashton Cross: We have proposed at least seven different names. Your Lordship wants the word "manufactory" out, and also "Quinine Bitters."

His Lordship: I want you to remove anything which could be mistaken for the plaintiffs' name. The plaintiffs' name is "The Quinine Bitters Manufacturing Company," and you put, exactly on the place on the label where that occurs, the words "Quinine Bitters Manufactory."

Mr. Buckley: I am prepared to undertake this—to substitute these words, "Prepared only at the Laboratory, 30 High Street, Swansea."

His Lordship: Yes; if you give that undertaking till the trial of the action, then I do not think I ought to interfere further at this stage.

Mr. Graham Hastings: Why should the defendant not add his own name on his label?

His Lordship: If he puts "Laboratory" with his address, I think I ought not to impose upon him the necessity of putting his own name on the label.

Mr. Graham Hastings submitted formally the point as to the name. The defendant's own story was that he made up his label from a number of labels, in every one of which the maker's name appeared. Defendant's first reason for not putting his name on his labels was that nobody would sell the bitters, and now the excuse given was that there were so many "John Davieses." But if the defendant gave his address there could be no confusion, and it was important that his name should appear. Everyone put his name on his goods, and why should this man do otherwise? He (Mr. Hastings) would be satisfied with the undertaking now offered, leaving the rest to be dealt with at the trial; but surely the defendant ought to put his name on the label. Every other label which had been produced had the maker's name on.

His Lordship: Yes.

Mr. Graham Hastings, continuing, said that the plaintiffs put the name of their company on their label. Everybody else did so. Could the defendant suggest any honest reason why he should not put his name on his label? He said there were five John Davieses. Well, suppose there were a hundred—what did it matter? He had his address, and that would be enough with the name.

His Lordship then gave judgment on the motion. He said this case rested on a comparison of what had been called the "get up" of two preparations, and particularly on a comparison of the labels. The application came very late, because in his evidence the plaintiffs' secretary said he knew of all this a long time ago. But the main point rested on a comparison of the labels. There were a number of matters complained of which might at the trial be established so as to induce the Court to come to the conclusion that the defendant was really trying to take the benefit of the reputation gained by the plaintiff company. He was not at present satisfied as to that. But there was on the plaintiffs' label, "Prepared only by the Quinine Bitters Manufacturing Company (Limited), Llanelly, South Wales," and on the defendant's label there was, "Prepared only at the Quinine Bitters Manufactory, Swansea." That seemed to him to

come very near indeed to the line, and to be very like an infringement of the plaintiff's trade-name, and he certainly was much struck with it when, in the previous week, the motion was first brought before him. Mr. Buckley now offered an undertaking on the part of the defendant to discontinue that, and to use the words, "Prepared only at the Laboratory, 30 High Street, Swansea." In that state of affairs, and looking at all the circumstances of the case, his Lordship thought that, without prejudicing the trial of the action, that undertaking would be at present sufficient, and he did not think it necessary to exact from the defendant an undertaking to put his own name on the label. On the undertaking given by Mr. Buckley, therefore, there would be no order on the motion, except that the costs be costs in the action.

#### ANILINE-DYE AGENCY DISPUTE.

IN the Chancery Division of the High Court, on Friday, July 22, before Mr. Justice Chitty, Mr. Rigby, Q.C., asked for an injunction to restrain Alfred Schott and Philipp Segner, carrying on business at Manchester under the style of Schott, Segner & Co., from dealing in chemical colours or other products manufactured by the Badische Anilin und Soda Fabrik, and for an injunction to restrain the defendants from carrying on business under the above style. The defendants had for fourteen years acted as agents in the North of England for the plaintiff company. The defendants gave notice, and the agreement, so far as it constituted the defendants agents for the plaintiff company, was determined on June 30 last. The agreement provided that Messrs. Alfred Schott and Philipp Segner should bind themselves, in the event of one or other or both retiring from the agreement, or after the contract had come to be determined, not to enter into any like or similar business, nor to give information of any kind about the business, for a period of three years from June 30, 1892. Any breach of this clause was to be visited by a penalty of 2,500*l.* each. It also provided that the style of the firm—Schott, Segner & Co.—should remain the property of the plaintiff company after the dissolution of the agency contract, and that they should be at liberty to continue the business in that name. The defendants were paid partly by salary and partly by commission. There was no doubt about the breach of the contract; but the objection was taken that the agreement was invalid as being against public policy. His Lordship would, therefore, have to decide upon the construction of the agreement. On the determination of the contract the defendants had sent round to their customers, and the customers of the Fabrik, a circular stating that their contract with the company had expired, and that they would no longer continue to act as their agents. They stated further that they would continue to carry on business in aniline colours, tar-products, &c., and solicited a continuance of favours.

Mr. Channell, Q.C., who represented the defendants, said he argued that a man could sell his own name, but the question was, whether this had been done in the present instance. Without going further into that matter, he offered to cut off "& Co." from the present style of the firm, reserving only the names of Schott and Segner.

Mr. Farwell, for the plaintiffs, said he would accept that if the names were transposed.

Mr. Channell said that his clients had not considered that point; but, to pass to the substantial question, he agreed at once that if the clause prohibiting the defendants from carrying on business for three years from the determination of the contracts was confined to the Manchester and northern district it would have been a valid agreement. But the contract was much wider than was necessary for the protection of the plaintiffs, as not only did it fix no limit, but it prevented the defendants from exercising their talents in a business with which they were intimately acquainted.

His Lordship reserved judgment.

#### CLAIM FOR GOODS SUPPLIED AFTER BANKRUPTCY.

IN the Westminster County Court, on July 22, before Judge Bayley, the case of Chapple v. Baker, remitted from the High Court, was heard.

The plaintiff, a fancy-goods dealer of Villiers Street,

Strand, sought to recover 25*l.* 18*s.* 6*d.* in respect of goods supplied to the defendant, who formerly carried on business as a chemist and druggist at 283 Regent Street, W.

Mr. Moyses, for the plaintiff, said he did not think it would be disputed that the goods had been sold and delivered, and had not been paid for; but the defence which he understood was to be raised was that the defendant had paid a composition to his creditors, under an order of the Bankruptcy Court, and that, as the plaintiff did not go in with the other creditors, he was not now entitled to sue for the money. He submitted that it was for the defendant to prove this defence.

Mr. Horace Williams, for the defence, said the defendant was formerly proprietor of a chemist and druggist's business in Regent Street, and the goods in question were supplied to him in January, 1890. In August of the same year a receiving order was made against him, and on September 13 he was adjudged a bankrupt. In the following December a composition of 5*s.* in the pound was offered, and the whole of the creditors, with the exception of the plaintiff, took advantage of it. In February, 1891, an order of the Court was made, approving of the scheme and annulling the bankruptcy. It was true that the defendant had, by an oversight, omitted to schedule the plaintiff's claim in the list of creditors supplied to the Official Receiver; but this was a pure accident. Since the bankruptcy proceedings the defendant had actually volunteered to pay the plaintiff 10*s.* in the pound; but he absolutely declined to accept anything less than the full amount of his claim.

The plaintiff, Mr. John Chapple, gave evidence as to supplying the goods, and said he never heard anything of the subsequent arrangement to pay the creditors a composition or he would have accepted the offer.

The defendant also gave evidence and was cross-examined by Mr. Moyses, who elicited that he had previously been made a bankrupt, and that his losses had been brought about by Stock Exchange speculations. There was only a lapse of six months between the two bankruptcies, the previous one having taken place when he was a chemist at Regent Street.

Mr. Moyses, in addressing the Court, asserted that the defendant had been guilty of a deliberate fraud in not having scheduled the plaintiff's debt in his list of creditors, and if the case failed on that point, he would submit that the defendant had still been guilty of fraud in obtaining the plaintiff's forbearance. He should ask his Honour to say that the defendant was liable, and to give judgment for the plaintiff for the full amount of his claim.

Mr. Williams said it was nonsense to try and go behind the order of the Bankruptcy Court. If the defendant had been guilty of any fraud the plaintiff had his remedy.

The learned Judge said he did not think there was any evidence of deliberate fraud on the part of the defendant, and therefore the bankruptcy proceedings must be a bar to the present proceedings, and judgment would be for the defendant, with costs.

#### THE TARTARIC AND CITRIC ACID CASES.

AT the Woolwich Police Court, on Wednesday afternoon, the adjourned summons came on for hearing before Mr. Kennedy, against Mr. George Mence Smith, oilman, of Woolwich, Plumstead, and elsewhere, for selling tartaric acid containing .0026 per cent. of lead, equivalent to 0.18 grain of lead in the lb. He was also summoned for selling citric acid containing 0.037 per cent. of lead, equivalent to 2.59 grains of lead in the lb.

Colonel Hughes, M.P., solicitor to the Woolwich Local Board of Health, appeared to prosecute, and Mr. Blanchard Wontner appeared for the defence.

There were also adjourned summonses for hearing against Mr. Benjamin Harwood, chemist, of 69 New Road, Woolwich, for selling tartaric acid containing .028 per cent. of lead, equivalent to 1.96 grain of lead in the lb., the same being injurious to health; and for selling citric acid containing .035 per cent. of lead, equivalent to 2.45 grains of lead in the lb.

Further summonses were down for hearing against Clara Brook Smith, chemist, of 16 High Street, North Woolwich, for selling citric acid containing .0112 per cent. of lead, equivalent to 0.78 grain per lb., and for selling tartaric acid

containing '0176 per cent., equivalent to 1.23 grain of lead per lb.

On the case being called on, Mr. Wontner asked permission to say a few words. The matter had been under the consideration of the Chemical Section of the Chamber of Commerce, and had been fully discussed, with the result that it was thought that further evidence should be called if necessary. He had now present Dr. Stevenson, analyst to the Home Office.

Mr. Kennedy told Mr. Wontner that he was at present very much in his favour, and he did not think any further evidence need be called for the defence. He asked under what section the case was taken.

Mr. Wontner: Section 6.

Mr. Kennedy: Then what have we to say as to the article being injurious to health?

Mr. Wontner said the summons stated "to the prejudice of the purchaser."

Mr. Kennedy said it also stated that the same was injurious to health.

Mr. Hughes said it was injurious to health.

Mr. Kennedy said that, seeing the section under which the case was brought, they might have dispensed with Dr. Muter's evidence. Were there any more witnesses for the prosecution?

Mr. Hughes said he thought that the case was closed. If it was necessary he could prove that lead was a poison. It was said it was unavoidably mixed in the manufacture, but it was not so, except to cheapen the manufacture, for platinum could be used. He handed the magistrate a copy of the British Pharmacopœia to read on this point.

Mr. Wontner: That is a guide to medicine, and not to grocers.

Mr. Hughes said that it was a most interesting case, whichever way it should be decided. There was no doubt that lead was a poison, but it was a question of degree what quantity was required to be injurious to health. What amount would be injurious?

Mr. Wontner said it had been stated that fifty-seven bottles of lemonade a day for six months would be enough to injure health.

Mr. Kennedy said the evidence showed that the quantity of lead was infinitesimal, and he had come to the conclusion that it was unavoidably mixed with the acid in the process of manufacture. He dismissed the summons, but agreed to grant a case to the Quarter Sessions.

The other summonses were, at Mr. Hughes' request, adjourned *sine die*, and it was agreed that a number of similar summonses taken out by the Plumstead Board of Works should be also adjourned.

Mr. Wontner said it was only fair to say that Dr. Stevenson, the greatest living authority, would have borne out the evidence of Dr. Muter, and would say that people might continue to drink lemonade, although he would not advise them to drink twenty-five or fifty-seven bottles a day. (Laughter.)

#### IMITATION OF ENGLISH SPECIALITIES IN FRANCE.

YOU can scarcely realise across the Channel, writes one of our French correspondents, the extent to which many well-known English specialities are imitated in France. Directly an article becomes popular, and its merits (coupled with those of the advertising expert) create a demand, an imitation of that article is sure to appear.

It is not so much the actual imitation of the bottle or wrapper of which one has to complain, although only unscrupulous persons would go so far as that; it is the appropriation of the name of the original inventor and textual copy of his address. Moreover, the British Government stamp is also imitated and affixed in the ordinary way over the cork. This precaution is naturally intended to guarantee the purchaser that the article is genuine. Unfortunately, here, as in England, the public do not realise that the "stamp implies no Government cation."

These counterfeit stamps are supplied to chemists at 1s. per doz (1½d. size). The engraving is well done, and the spurious stamp is an exact copy of the original.

Amongst the English specialities most in demand by

French customers are Henry's calcined magnesia. Steers opodeldoc (Newbery), Parrish's chemical food (Squire), alkaram, Morison's pills, &c.

Being called on last week by the traveller of the house in Paris which makes a speciality of imitating specialities, I was somewhat interested in seeing amongst his samples a bottle of Henry's magnesia. The traveller did not attempt to conceal the fact that the article was a counterfeit. The price he asked was 6f. (=4s. 10d.) per doz. He coolly informed me that he had taken an order from a wholesale house the same morning for 300 bottles. In course of conversation, he mentioned that the magnesia was really of English manufacture, giving the name of the firm who supplied it. On examining carefully the label on the wrapper, and comparing it with an original one, I observed that the following words were omitted: "Trade-mark. Henry's calcined magnesia." I attempted to point out to the *commis voyageur* that his firm was acting most dishonestly towards Messrs. Henry, and unfairly with respect to myself and other honourable chemists, as we naturally cannot compete with our neighbours who sell a spurious article. I could not, however, convince him that he was doing an injustice no anyone.

"Parrish's chemical food, prepared by Squire," so says the label, is supplied by one of my neighbours, an Italian. I have not seen the preparation, but I was assured by an old assistant of mine, who afterwards went to live with this person, that he had a quantity of labels printed with the name and address of Squire, and that he was also in possession of a "seal," turned to imitate that used at 413 Oxford Street. It would be interesting to hear the opinion of some of your readers as to the best means to adopt in order to put a stop to this unfair system of trading. Would it not be well to lay the matter before the English ambassador in Paris, and invite him to use his influence with the French Government? The Minister of Commerce would probably be the person whose attention should be drawn to the subject; he would then, doubtless, refer the question to the School of Medicine.

The authorities at Somerset House ought to afford their support and assist specialists who may decide to check the abuse practised so publicly.

It would be a very simple matter for anyone who wished to defraud the British Government to buy up a supply of the imitation stamps referred to, and dispose of them at 50 per cent. less than the price of the genuine. The makers of these preparations, as well as the engravers, argue that French medicines are imitated in a similar way in London. I do not know if this statement is correct. I trust not, for the sake of the reputation of my own countrymen.

#### "TEETH PAINLESSLY EXTRACTED."

A VERY comforting and tempting announcement, truly, to many miserable sufferers, but one which is by no means always justified. Except with one agent, the pretension is, in a majority of cases, little better than a fraud. I have had a considerable experience at both ends of the forceps of the so-called painless methods of extraction, and perhaps my reminiscences may be useful.

Years ago, to begin *ab initio*, when a young junior with more spare cash than sense, I conceived it to be a grand *conservative* idea to submit my mouth at periodical intervals to the inspection and tender care of a dentist. From that time I date all my dental troubles. There was always some little spot which the man of forceps would discover, explore, excavate, and fill, until at last my mouth became like a piece of tenement property, with inmates troublesome and undesirable, many of whom had, after shorter or longer trouble, to be summarily evicted.

Cocaine and caloric fluids are by no means certain. One can produce insensibility of the gum with cocaine, but even if injected far into the tissues it fails. Having an extremely loose lower incisor, I applied cocaine in 20-per-cent. solution. This enabled me to cut with a lancet, and painlessly, far down into the gum all round the tooth—in fact, to the alveolar ridge. The tooth was now, of course, very loose, but any attempt to remove it was exceedingly painful. A grain

of cocaine citrate was pushed as far down to this ridge as possible, and injections made to the extreme end of the fang. After a minute or so the tooth was twisted out, a pull being very painful; but the operation was not performed without a sharp pain. It was a useful experiment since tried on two similar teeth in my own head, and I would not hesitate again to resort to the method. But few dentists would take all this trouble, nor use anything like the same quantity of obtundent for their patients. One can be very brave over other people's teeth. The usual plan is to inject a solution of cocaine on each side of the tooth, and then, after the proper interval, extract the offender. It is at best a painful operation.

Caloric fluids are applied on cotton wool, a saturated piece of the wool being held by finger and thumb to the neck of the tooth and gum. In many cases of front teeth and bicuspsids this proves a fair success, but it is unwise in the interests of strict veracity to take the word of patients in all cases. They are only too glad to be relieved of their pain, which is soon forgotten, and they at the time say they felt nothing, would not mind it in future, and so on; but when the time arrives for them to submit again to the operation, they hesitate and shrink no less than before. The sensation, with these single-fang teeth under the most favourable circumstances, is something like one would imagine to be produced by the forcible detachment of a pneumatic ball from a tender and delicate surface.

Nitrous-oxide gas is by far the best anæsthetic for extractions. I have inhaled it many times: have given it frequently, and would never hesitate to take it myself. But here, again, we are at the mercy of the operator. Give enough of the gas, and the operation is painless and not unpleasant; but now and then operators do not give enough. Then the sensation can only be described as diabolic. Experience again. You feel, say in the case of a lower molar, as if you were being thrust through the floor of the room, head, trunk, and limbs all in one indiscriminate mass; this is, of course, when the forceps are being applied. You then feel yourself hauled up again in the same manner, and finally, with your head swinging round and a buzzing in the ears, you find yourself expectorating sanguinary matter in the handsome receptacle kept for the purpose.

Just recently, after two or three weeks of tic and neuralgia, culminating in alveolar abscess, first of a central and then of a lateral incisor, I was persuaded by a brother dentist to try the "newest thing out," "far better than gas," "quite painless," "marvellous thing," "will knock gas into a cocked hat," and so on. The agent was ethyl chloride. This compound is prepared in glass tubes, one end of which is drawn to a fine curved or straight point and hermetically sealed. This fine point is snipped off, and the tube being held in the hand, a fine spray is projected on the parts to be anæsthetized—i.e., to the gums on each side of the tooth, the mucous membrane being carefully wiped prior to commencing. So far, good; the sensation was not bad—far better than ether spray ordinarily used. The application of the forceps caused no pain, but the removal of the tooth or teeth was just as painful and unpleasant as it always is with anything but "gas." There was a feeling as if all the processes of the mouth, teeth, and jaws were holding tight in one direction and the operator hauling in another, until something gave way with a snap (very disagreeable this), and away flew the tooth.

There is plenty of room for further experiment; the ideal anæsthetic has not yet been discovered. In the meantime, however, nitrous-oxide gas is first and the rest nowhere, and the opposition to it in many quarters is to me inexplicable.

AN ADVERTISEMENT reads:—"Wanted, a young man to be partly outdoor and partly behind the counter"; and we ask, "What will be the result when the door slams?"

MR. BENJAMIN DAY, of Rosario, to whose projected "London and River Plate Pharmaceutical Company" we referred a few months ago, is now in London on business of his company, and may be addressed 24 Montague Place, Russell Square, W.C. He reports that the company's shares have been freely taken up in Argentina, and that buildings for the use of the company are being erected at Rosario.

## A SIMPLE WATER-FILTER.

THE filter shown in the accompanying illustration may be set in operation with a minimum of cost and trouble. The ingredients required for its preparation are a large-bowled clay pipe, an indiarubber tube, some charcoal, a plug of wadding, and a cork. The wadding should be put at the bottom of the pipe-bowl, which is then filled with small

pieces of charcoal, the interstices between the pieces being well plugged with charcoal powder. The cork is then used to close the mouth of the bowl and keep the charcoal in its place. Having affixed your indiarubber tube to the end of the pipe-stem, your apparatus is now in working order. Care should be taken, however, that the tail-piece of the indiarubber tube is at a lower level than the bowl of the pipe. By twisting a hairpin into the shape shown in the illustration and fastening the indiarubber tube through the opening C, you may cut off the flow of filtered water at your convenience.

SHE UNDERSTOOD CHILDREN.—Probably one of the most startlingly unanticipated replies on record was that of the "mother's help," a young lady versed in all present-day female attainments, who, in reply to the address, "I want a person of some experience in the nursery; do you know much about children?" cheerfully retorted, "Oh, dear, yes; I've dissected a baby."

ECHO ANSWERS, "WHEN?"—"When to be a pharmacist is equivalent to being considered by the community to be a learned man, an upright man, a man of unflinching integrity and unswerving honesty, then there will be no one to dispute our right or title to be called the profession of pharmacy." Professor Otto A. Wall recently said so in a valedictory address to the graduates of the St. Louis College of Pharmacy.

A CURIOUS case is reported from America. A negro child swallowed a hard piece of beef, with cartilage adherent. It stuck in the œsophagus, and attempts to remove it only resulted in fixing it more firmly a few inches above the cardiac orifice. For six days neither food nor water could enter the stomach. The child was then given a dose of artificial gastric juice, and in a few hours the piece of beef was partly rejected by vomiting and partly passed on into the stomach.

## SUPPLEMENTS IN THE SUMMER NUMBER.

FORTY-TWO has been the mystic number lately. It has for many years been an important number in pharmacy, because the great organ of the trade has been published at "FORTY-TWO." But just lately all the newspapers and all the men in the street have been talking about FORTY-TWO. What have they referred to? Mr. Gladstone's majority? To some extent, perhaps, yes. But the great fact to which the newspapers and the men in the street were unconsciously pointing, and of which the recent elections were typical, was that FORTY-TWO was to be the number of the supplements inserted in the 1892 Summer Number of THE CHEMIST AND DRUGGIST. They are a very interesting lot. May we ask subscribers to give them the attention they deserve?

Messrs. Ambrecht, Nelson & Co., in a circular on their coca wine, repeat some of the illustrations which were found to be so popular in our last DIARY, and from which may be gathered how successful this valuable preparation has been.

Messrs. Armour & Co., the great hog-killing Chicago firm, claim that their enormous opportunities of obtaining pepsin and other digestive ferments ensures that pre-eminence in this manufacture which they consider belongs to them.

A number of remarkable testimonials of Benger's Food are given in the supplement inserted by F. B. Benger & Co. (Limited), of Manchester.

Messrs. Blondeau & Cie. insert a circular of unusual interest. It gives an account of their factory, with a large number of photographic reproductions, showing the various departments. This description of a business which has grown to a very large one in but a few years will be read with considerable interest. Appended to this are beautifully produced representations of the elegant style in which Messrs. Blondeau & Cie. present their goods to the public.

Bovril (Limited) is another of the great companies which are adopting a system of protecting retail prices. The company announce a special line of Bovril for invalids, to be supplied only to chemists and druggists, and to those only in that trade who will undertake to sell it at marked prices.

Mr. Charles Bromley, of Liverpool, in a cleverly-drawn article, gives full details of the non-cutting agreement which he offers to make with chemists who will stock his gout and rheumatic pills. Note the cheque.

Brunner, Mond & Co. (Limited) submit to the trade very forcible arguments in favour of the use of bicarbonate of soda instead of whiting for the production of carbonic-acid gas in the manufacture of aerated waters.

Mr. James Burrough, the distiller, of Chelsea, directs attention to his manufactures of S.V.R., S.V.M., and to his wines.

Messrs. Burroughs, Wellcome & Co. insert an illustrated trade price-list of their very numerous pharmaceutical manufactures. This price-list, which may be said to comprehend the whole range of modern elegant pharmacy, should be carefully preserved, as it will often be found to contain particulars of medicines called for by the medical profession. Messrs. Burroughs, Wellcome & Co. have bound their list in extremely attractive covers, giving perfectly accurate representations of their laboratories at Dartford and of their City offices.

A Lanoline showcard is inserted by Messrs. Burroughs, Wellcome & Co., which, besides giving representations of the form in which the Lanoline preparations are put up, bears a most artistic design suggesting the popularity of this product all round the world.

Messrs. Cantrell & Cochrane, of Dublin and Belfast, publish some details of the successes which their productions have attained, and especially of their aromatic ginger-ale, which they not unjustly claim to be a beverage for the world.

Messrs. Carter & Wright, of Bristol, represent the style in which they put up their concentrated syrups, and they give a full price-list of their many concentrated essences for

aerated waters. A testimonial to their lemon-syrup from the Bishop of Gloucester and Bristol is added.

The Chemists' Aerated and Mineral Waters Association (Limited) give their price-list, and also direct attention to the advantages which they claim to offer as a co-operative manufacturing concern.

The Chemists' Association (Limited), which, as we have previously stated, has taken over the business of Messrs. Thompson, Walters, Hole & Co., insert their prospectus in our foreign issue only, they having reserved a certain proportion of shares for allotment to chemists in the colonies.

Messrs. George Curling & Co. give a price-list of the articles they prepare for exportation. This appears in our foreign edition only.

A very interesting supplement is that inserted by Messrs. Evans, Lescher & Webb, who take the opportunity, while announcing the addition of another building to their already extensive warehouse in Bartholomew Close, of presenting a brief history of their firm, and to this they have attached excellent portraits of the partners.

A. D. Fleming & Co. (Limited) publish an amusing circular in regard to their patent solidified oil. This oil, it appears, has a multitude of virtues and only one defect, which is that "it will not fry fish."

The Godes-berger Company bring forward a large number of flattering testimonials to the purity and pleasantness of their Godes-berger water, and make prominent the fact that they supply it to Queen Victoria.

Messrs. Harrington Bros., of Cork, publish a list of the chemicals which they manufacture, and which they claim as specialities.

Messrs. Hockin, Wilson & Co. give particulars of their numerous chemists' specialities, and call attention to some very useful counter-novelties, including a puff-case and a perfume-stand, designed to promote trade.

Messrs. Julius Hülsen & Co., of Newcastle-on-Tyne, direct prominent attention to solidified sulphuric acid, which they sell under the name of super-sulphate of soda, and which they recommend as an especially convenient way of exporting vitriol.

A useful price list with coloured illustrations of the very attractive pleated-paper bottle-caps, known as "Hunt's," is inserted by Mansell, Hunt, Gatty & Co. (Limited).

The Johannis Co. (Limited) give a price-list of their famous aerated water which they entitle the "King of Natural Table-waters," and they show by a list of their special appointments the popularity the article has obtained.

Frederick King & Co. (Limited), Belfast and London, the manufacturers of Edwards's desiccated soup, now give particulars of their Gravina, and good reasons "why we should use it."

Under the title of "Practical Hints for the Dispensing Chemist," one of the supplements gives useful suggestions in regard to the employment of Lanoline in pharmacy and in the preparation of toilet articles. An excellent typical formula for a Lanoline ointment will be found in this circular.

Messrs. Leath & Ross contribute in their supplement very full particulars of the homœopathic-medicine trade, and they show illustrations of their cases, give a concise list of the uses of the principal medicines, and an alphabetical list of the more usual complaints and the medicines suitable for these.

Loft's Patent Check-till Company (Limited), of Cambridge, give illustrations of their popular check-tills, and of their latest improved patent bottle washing and rinsing machine.

The largest supplement we have ever had the honour of distributing to the trade is that published with this number by Messrs. May, Roberts & Co. It is a fully illustrated and complete net price-list, revised to the latest day, of druggists' sundries and proprietary medicines. We hope Messrs. May, Roberts & Co. will find their vigorous enterprise well rewarded.

Messrs. W. Meadowcroft & Son, of Blackburn and Glasgow, give useful particulars of their aerated water machinery and of their concentrated essences for use in the manufacture of ginger, lemon, and other aerated beverages.

Messrs. Newball & Mason, of Nottingham, keep to the front with their now very numerous preparations for the production of temperance beverages, besides their "Mason's Extract of Herbs"; and give a long list of wine essences and botanic extracts.

Messrs. Osborne, Bauer & Cheeseman, of Golden Square, directed attention to their many toilet specialities, some of which are very happily named.

A very strikingly printed circular is that inserted by Mr. James Pascall, of Blackfriars Road, advertising his "Golden Maltex" and other confectionery products.

Messrs. A. & F. Pears, besides giving the trade terms for their famous soap, present a collection of four book-markers to every subscriber.

The Phoenix Hardware Company, of Liverpool, bring before the trade an illustration and description of their alarm cash-till, of which they say half a million are now in use in the United States.

Price's Patent Candle Co. (Limited) very justifiably keep before the trade the especial purity of their glycerine, guaranteed free from arsenic and all other impurities.

Mr. J. L. Rosenkranz, of Frankfort-on-Main, sends a circular with illustrations of his manufacture of clinical thermometers, dispensing-bottles, saccharometers, and numerous surgical inventions. This appears in our foreign edition only.

Messrs. F. Rosenthal & Co. bring before chemists details of their proposal to contribute a handsome sum to the Grace Darling National Memorial by means of the sale of their "Grace Darling Starch." This is their invitation to the trade to co-operate.

Messrs. J. F. Shew & Co., the manufacturers of photographic apparatus, provide a well-illustrated list of novelties in cameras, hand-cameras, and other adjuncts of the photographic business. There is a growing number of chemists to whom this circular should be useful.

Messrs. Sozio & Andrioli again give their very useful report of the flower and essential-oil productions of the South of France. There are many good hints to buyers in this supplement.

A very charmingly coloured lithographed circular is inserted by Messrs. Spottiswoode & Co. in order to show advertising firms what they can do in the way of fine-art publications.

"Doggie" chemists will certainly be interested in the attractive illustrations which are given in the supplement inserted by Spratts Patent (Limited).

Messrs. William R. Warner & Co., of Philadelphia, give a price-list of their sugar-coated pills, and illustrations of the vases in which they send them out through their agents, Messrs. Newbery & Sons.

*The following applications for Patents have been registered at the Patent office.*

#### SPECIFICATIONS PUBLISHED.

*Copies of the following may be obtained from the Patent Office, Southampton Buildings, Chancery Lane, E.C., for the prices mentioned, and 1d. extra for postage if required.*

Acetic Acid.—12,660.—July 9, 1892.—C. Lowe. Derivatives.

Bath Glove.—9,784.—May 23, 1892.—W. E. Playfair and H. E. Warren. A loofah bath and friction glove.

Blight-killer.—12,088.—June 29, 1892.—J. Bond and C. Ballinger.

Cattle-cakes, &c.—9,667.—May 21, 1892.—J. Bibby. Composite cakes for cattle-feeding and the like.

Cattle-medicines.—9,328.—May 17, 1892.—A. J. Boulton.

Chemicals.—10,326.—May 31, 1892.—C. Négrier. Sulphate of iron and sulphate of copper.—10,450.—June 1, 1892.—E. J. Barbier. Neutral sulphate of soda and sulphuric acid from bisulphate of soda.—11,889.—June 25, 1892.—P. Römer. Production of potassium carbonate from potassium sulphate.—12,275.—July 2, 1892.—G. W. Sharp. Caustic soda or potash.—12,294.—July 2, 1892.—H. W. Wallis. Chlorine.

Corn, &c., Protector.—12,240.—July 1, 1892.—R. Glover.

Dextrin.—12,585.—July 8, 1892.—T. Bayley.

Disinfectant.—12,433.—July 5, 1892.—E. O. Storr. New medical compound for disinfecting and fumigating purposes.

Dispensing-apparatus.—12,038.—June 28, 1892.—W. M. Fowler.

Feeding bottles.—9,462.—May 20, 1892.—G. I. Thomson.

Feeding-bottle Requisites.—10,181.—May 28, 1892.—H. Jack, trading as M. Bailey & Co. Serrated or corrugated feeding-bottle teat-cleaner.—11,689.—June 22, 1892.—A. M. Small. Babies' teats or nipples for use with babies' bottles or without bottles, also in the means of supply of food to babies.

#### MARRIAGES.

*[Notices of Marriages and Deaths are inserted free if sent with proper authentication.]*

BICE—WILLCOCKS.—On July 19, at the parish church, St. Austell, by the Rev. A. P. Willway, James Bice, chemist and druggist, of St. Austell, to Jessie, only daughter of Phillip Willcocks, Pentewan, St. Austell.

CLEELAND—MCALLA.—On July 14, at Westbourne Presbyterian Church, Belfast, by the Rev. J. W. Gibson, M.A., Robert Henry Cleeland, chemist and druggist, eldest son of R. Cleeland, M.A., Belfast, to Mary, youngest daughter of John McCalla, Ballywoolen, Killyleagh, co. Down.

#### DEATHS.

BALKWILL.—On July 11, very suddenly, at 14 Old Cavendish Street, Cavendish Square, London, William Edward Balkwill, M.D., eldest son of the late William Handcock Balkwill, chemist, of Kingsbridge, Devon. Aged 43.

BROWN.—The death is announced of Mr. Lewis Brown, who was for over forty-five years connected with the firm of Messrs. Crafton & Sons, chemists, High Street, Croydon. Mr. Brown died last week, at the age of 82 years.

EVANS.—At Biggleswade, on Sunday, July 24, John Evans, pharmaceutical chemist, senior partner in the firm of Messrs. Evans & Son, chemists and druggists, Biggleswade. The deceased gentleman was taken ill suddenly at dinner, death resulting in a few minutes. Mr. Evans was one of the oldest and most respected inhabitants of the town.

MASON.—On July 19, at Johnstone, N.B., Robert Mason, chemist and druggist, suddenly.

TATE.—The death took place, somewhat unexpectedly, on July 22, of Mr. A. Norman Tate, the well-known analytical chemist, of Liverpool. The deceased was born at Wells, Somerset, on February 24, 1837, and after his scholastic education he became a pupil of Dr. Sheridan Muspratt. His pupillage over, he became an assistant chemist to Messrs. Hutchinson & Co., of Widnes, but he had only held this position a few months when he was promoted to be chief chemist. After a few years of this work Mr. Tate commenced practice in Liverpool as an analytical and consulting chemist, giving special attention to the engineering side of his profession, and in this capacity he made for himself a high reputation. As a teacher and writer he also distinguished himself, and his figure was familiar in pharmaceutical circles. He was an authority on petroleum, and published a work entitled "Petroleum and its Products," of which French and German translations have appeared.

*Notice to Retail Buyers:—It should be remembered that the quotations in this section are invariably the lowest net cash prices actually paid for large quantities in bulk. In many cases allowances have to be added before ordinary prices can be ascertained. Frequently goods must be picked and sorted to suit the demands of the retail trade, causing much labour and the accumulation of rejections, not all of which are suitable, even for manufacturing purposes.*

*It should also be recollected that for many articles the range of quality is very wide.*

42 CANNON STREET, E.C., July 27.

## The London Markets.

*London.* Almost everybody in the drug trade complains of the quietness of business, although the number of those who profess increasing hopefulness of a good time coming, and to come shortly, is on the increase. There is no denying, however, that at present trade is abnormally slack. In drugs the article which has attracted the principal share of attention is tonquin beans, which have been moving upward with considerable rapidity. New York and Liverpool seem to have given this drug a start, the cause of the advance being the alleged capture of the bulk of the season's crop while on its way from Ciudad Bolivar to the coast by one of the two parties that have been fighting for the mastery in Venezuela. This report may be true or not, but at any rate it has provisionally served the ends of the bull operators. Tamarinds, which were abnormally low in price, have also recovered slightly; gum kino is scarce and high in price, and higher prices are also asked for ergot of rye, of which the new crop is now almost in sight. Opium has received more attention, and cinchona, of which very little was offered at auction, sold very well. There has been a stiffish rise in Japanese peppermint oil, while menthol and HGH peppermint are also firm. Damiana-leaves are reported dearer from America, and it is said that there is more business doing in spermaceti. Saffron has recovered somewhat, but new chamomiles are coming down in price, and insect-flowers are also rather weaker. Otto of rose keeps firm, but the price has not yet been fixed. French essential oils of lavender, thyme, and spike are rising. Mexican sarsaparilla is advancing in America, but Honduras has sold cheaper here privately. Oil of star-anise is also somewhat lower.

In fine chemicals, changes are few and unimportant. Camphor keeps steady, and quinine is utterly neglected, though the tendency inclines, perhaps, in favour of buyers. Cream of tartar and chlorate of potash are the turn easier; tartaric and citric acids, to all appearance, absolutely devoid of backbone. In products allied to the drug and chemical business the tendency is mostly downwards, the only exceptions being turmeric, which is slightly dearer, and East Indian indigo, in which there is a lively boom. Potato spirit is coming down like a stick; white pepper, tapioca, nutmegs, cloves, and ginger are easier; shellac irregular, but tending lower; and gambier cheaper.

In fixed oils business is very quiet, and there are no changes of importance to record in this department.

The Bank rate remains at 2 per cent.; bar silver is only worth 39½d. per oz. to day; and Mexican dollars 38½d. The foreign exchanges are going from bad to worse: Bombay is 1s. 2½d.; Calcutta, 1s. 2½d.; Hong-Kong, 2s. 9½d.; and Shanghai, 3s. 10½d.

*Liverpool.* In the Liverpool market, our correspondent there tells us, unusual quietude prevails. Balsam copaiba still remains firm, in spite of arrivals; castor oil is lower and depressed; quillaia keeps coming down; canary-seed is now firmly held, large sales having been made

this week; tonquin beans have had a good spurt; and Chilian honey and African ginger are firmly held. Calabar beans are still selling at very low figures.

*America.* Our correspondent in New York, writing under date of July 16, reports that the drug market, so far as export business is concerned, has been quite dead for some time, and that the country demand is now also becoming exceedingly limited. In balsam copaiba the market is very quiet, the only kind at all in demand being Central American, at 34 to 36 cents. Peru balsam is also sluggish of sale, at \$1.10 to \$1.20 per lb. Bromide of potassium is held at 20 cents for foreign, and from 21 to 22 cents for domestic; the position of the article remains *in statu quo*. Chinese cantharides show greater firmness, and several lots have been withdrawn by the holders, who have discovered the stock to be much smaller than was supposed. Cubebs are rather neglected, excepting for hand-to-mouth sale in the country. Ergot of rye is weak and neglected, at 38 to 40 cents for German; the quotations for Spanish are quite nominal. Camphor and gamboge are firmly held and inquired for; but all other gums are neglected. Guarana has been reduced to \$1.25 and \$1.30 per lb., but this reduction in price has not improved the demand in the least. Damiana-leaves are scarce and dearer, and pilocarpine is also higher, on account of the scarcity of raw material. Mexican sarsaparilla has advanced to 12 or 12½ cents per lb., and jalap also keeps steady at the recent improvement. Iperacuanha is being offered "to arrive" at \$1.65 per lb. The demand for spermaceti shows no improvement, and the market remains dull and nominal.

### Terminal Trading in Pepper in Amsterdam.

A terminal market for pepper has been established in Amsterdam under the auspices of the Amsterdam Bank of Liquidation. Only contracts concluded by brokers approved of by the bank are admitted. Three forms of contract are admissible—viz., the Lampong contract (in fulfilment of which all other East Indian varieties, provided they are equal to the standard in quality, may be tendered), the Singapore contract, and the white pepper contract, Singapore Basis, in fulfilment of which usual good-quality Penang pepper may also be tendered at a reduction of 5 per cent. upon the contract price. The contract units are: Lampong contract, 200 bales, or net 10 tons; Singapore and white-pepper contracts, 100 bales, or net 6 tons.

**ACID (CITRIC).**—Dull, and tending easier. The spot price to-day is from 1s. 4¾d. to 1s. 5d. per lb., according to brand.

**ACID (TARTARIC).**—Very dull at 11¾d. to 12d. per lb. on the spot, according to brand.

**ALCOHOL.**—German potato spirit is very much lower, and may to-day be had at 8½d. per proof gallon net, c.i.f. terms, for quantities. This price is still more than ½d. above the lowest point known in the article.

**ANISE.**—The Russian crop of anise, as we have had occasion to point out before, is expected to be very small this season. The stocks of *Star-anise* in China are said to be very small and of exceedingly poor quality.

**ANTIMONY.**—The market for crude Japanese remains firm, and business is reported on the spot at 27l. per ton.

**ARSENIC.**—Prices are rather easier. Best white powder is quoted at 12l. to 12l. 5s. per ton, landed terms.

**BALSAM (COPAIBA).**—The market is steady, but very quiet. Good bright *Bahia* balsam is worth 1s. 7d. to 1s. 7½d. per lb.; ordinary ditto, 1s. 4d. to 1s. 5d. per lb. Fair to good bright thick *Maranham* and *Pará* may be had from 1s. 7d. to 1s. 10d. per lb.

**BALSAM (TOLU).**—Very slow of sale at 1s. 2d. per lb. for good quality.

**BLEACHING-POWDER** keeps very firm, at 7l. 10s. per ton, either f.o.b. on the Tyne, or on rail at the works in Lancashire.

**BORAX.**—A quiet market. Powder is quoted at 30s., while crystals may be had at 29s. per cwt.

**CALABAR BEANS.**—Sales are reported from Liverpool at 2d. per lb.

**CAMPHOR (REFINED).**—The German and French refiners are firm; 1s. 5½d. is the price for Grossmann's bells, and French refined camphor stands at the same figure.

**CARAWAY-SEED.**—The new crop of Dutch seed has begun to arrive upon the markets. It is not likely to be a large one, however, as the acreage under caraway has been much reduced this season. At auction to-day 140 bags Dutch seed, rather small, but of fair quality, sold at 20s. per cwt.

**CARDAMOMS.**—The following figures show the exports of cardamoms from Ceylon between January 1 and July 4:—1892, 195,018 lbs.; 1891, 166,820 lbs.; 1890, 184,236 lbs.; 1889, 157,804 lbs.

**CASTOR-SEED.**—One of the principal features of the market this week has been the sale by public auction on Tuesday of about 1,800 bags of East Indian castor-seed. The whole of this was sold to seed-crushers who paid 8½. 2s. 6d. per ton for it. This, we believe, is the first occasion upon which castor-seed has been sent over from India in such a large quantity for crushing in this country.

**CHAMOMILES.**—Belgian chamomiles are distinctly cheaper in price. Sales have been made of fair white to small flowers at 5½. 15s., and that price must still be conceded for any available parcels; fair to small and somewhat dark flowers of the new crop are offering, however, at from 103s. to 105s. for shipment in about a fortnight.

**CINCHONA.**—The periodical auctions on Tuesday were exceedingly light. Only seven sales had been declared, and one of this number was at the last moment withdrawn, leaving less than one-half an average quantity to be competed for. The catalogues included:—

|                            | Packages     | Packages |           |
|----------------------------|--------------|----------|-----------|
| Ceylon cinchona ..         | 564 of which | 548      | were sold |
| East Indian cinchona ..    | 383          | 340      | "         |
| South American cinchona .. | 295          | 175      | "         |
|                            | 1,242        | 1,033    |           |

The assortment of bark was a fairly good one, with, perhaps a rather larger proportion of *Officinalis* and *Ledger* than ordinary. Competition was not very keen, and the unit value shows no change—1½d. per lb. being about the average value. Most of the buyers called the prices "firm." The following are the approximate quantities purchased by the principal buyers:—

|                                             | Lbs.    |
|---------------------------------------------|---------|
| Agents for the Mannheim and Amsterdam works | 92,219  |
| Frankfort o/M. and Stuttgart works          | 42,116  |
| Brunswick works                             | 37,983  |
| American and Italian works                  | 23,202  |
| Paris factory                               | 20,319  |
| Auerbach factory                            | 9,610   |
| Messrs. Howards & Sons                      | 8,720   |
| Sundry druggists                            | 9,840   |
| Total quantity sold                         | 173,989 |
| Bought in or withdrawn                      | 36,280  |
| Total quantity offered                      | 210,269 |

It should be well understood that the quantity of bark bought gives no indication of the quinine value represented by it; some firms who buy large quantities of bark often take the poorer lots, while their competitors, who may buy less bulk, secure parcels of higher test.

The following are the prices paid for sound bark:—

**CEYLON CINCHONA.**—*Original.*—Red varieties: Ordinary dull and dark to good quilly chips, 1½d. to 2½d.; fair quilly twigs and chips, 2d.; fair, partly bold, but dusty root, 1½d. to 2½d. per lb. Grey varieties: Fair to good strong quilly stem and branch chips, 3½d. to 4d. (for a good parcel a bid of 5½d. per lb. was refused); fair root, 4½d. per lb. Yellow stem and branch chips, fair to good bright quilly, 4½d. to 6½d. per lb. Hybrid chips, 3½d. per lb. *Renewed:* Red chips, ordinary thin and dull to fine bright stout and quilly stem and branch chips, 2½d. to 4d.; fair to good bright quilly grey chips, 4½d. to 6d. per lb.

**EAST INDIAN CINCHONA.**—*Original.*—Red varieties: Ordinary small to fair bright quilly stem and branch chips, 1½d. to 3½d. per lb. Grey varieties: Ordinary to fair stem and branch chips, 2d. to 3½d.; dull to good root, 2½d. to 4½d. per lb. Yellow varieties: Small to fair stem and branch

chips, 2½d. to 3½d. per lb.; root, 4½d. per lb. *Renewed.*—Red stem and branch chips, 2½d. to 3d.; grey ditto, 4½d. to 6d. per lb.

**SOUTH AMERICAN CINCHONA.**—Fair partly broken cultivated Bolivian *Calisaya* quill, 5d. to 6½d. per lb.; damaged ditto, 4½d. to 6d. per lb.

The following figures represent the exports of cinchona from Java during the eleven months ending on May 31:—

|                           | 1891-92        | 1890-91        | 1889-90        | 1888-89        | 1887-88        |
|---------------------------|----------------|----------------|----------------|----------------|----------------|
|                           | Amsterdam lbs. | Amsterdam lbs. | Amsterdam lbs. | Amsterdam lbs. | Amsterdam lbs. |
| Government plantations .. | 578,845        | 491,325        | 475,699        | 723,491        | 575,986        |
| Private plantations ..    | 6,590,117      | 6,032,495      | 4,221,042      | 3,124,354      | 2,563,210      |
| Total ..                  | 7,168,962      | 6,523,820      | 4,696,741      | 3,847,845      | 3,139,196      |

From Ceylon, the exports in the periods between January 1 and July 4 have been:—1892, 3,175,137 lbs.; 1891, 2,696,550 lbs.; 1890, 4,229,329 lbs.; 1889, 4,933,965 lbs.

**CLOVES** are cheaper, and of 200 bales Zanzibar offered to-day, part sold at 2½d. to 2¾d. per lb. for ordinary to fair quality.

**COCA-LEAVES.**—The market is steady, and bright green *Truxillo* are not being offered at all. Good strong *Huanoco* leaves are held for 1s. 6d. per lb., which is above the present market value. A bid was recently made of 1s. for 5,000 lbs., but this was rejected.

**COCHINEAL.**—The market is quiet but steady, with small sales of common to fair black Teneriffe at 10d. to 11d. per lb. For fine silver, 1s. per lb., and for ditto black and grey-black, 1s. 3d. per lb., is wanted.

**COPPER (SULPHATE)** is still held at 15½. for good brands in London, and from 15½. 5s. to 15½. 10s. on the spot in Liverpool. For forward delivery 15½. 10s. is asked in Liverpool.

**CREAM OF TARTAR**—Very dull of sale at 84s. 6d. for best white French crystals, and 86s. 6d. per cwt. for powder.

**CUBEBS.**—The shipments of cubebs from Java are heavy. In the month of May alone they were 409 piculs, most of which went to Singapore, and from July 1 to May 31, they have been: In 1891-92, 1,724 piculs; in 1890-91, 1,227 piculs; in 1889-90, 1,148 piculs; in 1888-89, 959 piculs.

**DAMIANA.**—The price in New York, owing to great scarcity, has been raised to 1s. per lb., c.i.f. terms.

**ERGOT OF RYE.**—There have been some arrivals from Spain, which are believed to be the first parcels of the new crop. Good German and Russian ergot (old crop) is now offering at 2s. 2d. to 2s. 3d. per lb., c.i.f. terms, but sellers cannot succeed in placing contracts at that figure. For new Spanish ergot from 2s. 3d. to 2s. 4d. per lb. is asked.

**GALLS.**—Holders of *China* galls are asking more money, 50s. per cwt. being their present price on the spot.

**GAMBIER** is again lower, sales of 250 tons being reported for shipment at 17s. 6d. per cwt. for July-August and August-September.

**GINGER.**—*Cochin* ginger remains dull of sale, a few lots ordinary small rough and ends sold at 43s. per cwt. at auction to-day. *Jamaica*, sluggish, and saleable only at lower rates. A few lots sold at auction to-day at 48s. 6d. for common lean to 59s. 6d. for medium dull washed.

**GUM KINO** is exceedingly scarce. We understand the sales have been made at 80s. and at 85s. per cwt. for fair quality, and that the principal holders require 95s. per cwt. now.

**GUM OLIBANUM.**—At last Friday's auctions only about 50 packages, being less than 8 per cent. of the total quantity offered, sold at lower rates, reddish and pale drop at 23s. 6d. to 24s., and garblings at from 10s. to 14s. per cwt., according to quality.

**HONEY.**—*Chilian* is arriving freely.

**INDIGO.**—The public sales of Central American indigo, which were held on Wednesday last, reflected the advance established at the recent East Indian auctions. Of 250 serons offered, 150 sold at an advance of from 2*d.* to 3*d.* per lb. on good, and 4*d.* to 6*d.* per lb. on ordinary qualities. Common to good *Cortes* realised from 3*s.* 1*d.* to 4*s.*; common to ordinary *Sobres* from 3*s.* 3*d.* to 4*s.* 3*d.* per lb. *Flores* were not offered. Ordinary qualities were rather scarce. The market for *East Indian* indigo is very active, and business is reported to have taken place privately at an advance upon the last auction rates. The latest mail news from India (dated July 5) is contradictory, but upon the whole unfavourable. In the Behar district the crop will be at least three weeks late, and the prospects are very indifferent. In the North-West the crop outlook is exceedingly poor, and rain is badly needed. The produce which has been turned out in Bengal thus far is of indifferent quality. The statistical position of Indigo in London is said to be favourable, the stock now held here being the smallest on record. News with regard to the Madras crop is that it is going to be a very large one.

**ISINGLASS.**—At last Friday's public auctions a supply of 556 packages came up for sale. Although this quantity was barely half of that offered at the previous sales, it was still much in excess of the demand, and holders who wished to sell had mostly to accept lower prices, although Bombay cake was disposed of readily at 1*d.* per lb. advance. The following are the present values: *Para*—common dark to fair pale lump, 1*s.* 10*d.* to 2*s.* 8*d.*; low thin to good pale tongue, 1*s.* 2*d.* to 4*s.* 4*d.* per lb. *Maranham*—common to good ordinary red lump, 1*s.* 10*d.* to 2*s.* 5*d.*; ordinary to medium tongue, 1*s.* 11*d.* to 2*s.* 6*d.*; ordinary dark to fair yellow and red *West Indian*, 1*s.* 11*d.* to 2*s.* 3*d.* per lb. *Saigon*—good medium to fine stout yellowish leaf, 3*s.* 10*d.* to 4*s.* 4*d.* per lb. *Penang*—common small to fine stout leaf, 1*s.* 10*d.* to 4*s.* 4*d.*; ordinary red to good pale tongue, 1*s.* 9*d.* to 3*s.* 7*d.* per lb. *Bombay* and *Kurachee*—skinny to medium yellow tongue, 8*d.* to 2*s.* 3*d.*; ordinary red and dark to good stout leaf, 1*s.* 3*d.* to 3*s.*; ordinary to fine bright heavy bold cake, 6*d.* to 1*s.* 7*d.*; low to small *Manila* kind, 4*d.* to 7*d.* per lb.

**JALAP.**—For good sound Vera Cruz root offers of 1*s.* 4*d.* per lb. have been rejected. The owner will not sell under 1*s.* 6*d.* per lb.

**LIME-JUICE.**—The market is very firm. Fair quality Jamaica is held for 1*s.* 10½*d.* per gallon.

**MORPHIA.**—There is no alteration in the price of this article. Powder is at present held at 3*s.* 1*d.* per oz. for *hydrochlorate*.

**OILS (ESSENTIAL).**—It is stated (upon American authority) that the total output of HGH *Peppermint oil* has been 2,372 cases in 1890, 1,270 in 1891, and 1,150 cases in 1892. The average annual consumption of this oil is said to be about 1,500 cases. In London HGH oil is still obtainable at 13*s.* 4½*d.* per lb., but the tone of the market is decidedly firmer. *Menthol* is also dearer, and held for 9*s.* 9*d.* to 10*s.* per lb. for good to fine white crystals. Business has been done at 9*s.* 6*d.*, but it is doubtful whether that price would now be taken. The price of the new *Otto of rose* has not yet been fixed, but meanwhile the market remains exceedingly firm, and for any parcels now purchased an advance of from 5*s.* to 6*s.* per oz. from the lowest point must be paid. From the South of France we hear that oils of *Lavender*, *Thyme*, and *Spike* will be very scarce this season. It is feared, in fact, that some of the contractors will not be able to keep their engagements. Oil of *Bergamot* is slightly firmer in Italy. Oil of *Lemongrass* is dull of sale, at 1½*d.* per oz., and *Citronella* is also neglected at 11*d.* per lb., c.i.f. terms.

**OPIUM.**—London has exhibited a very much better tone this week. Limits are generally higher, and a number of parcels have been taken out of the market. This change has chiefly been brought about in consequence of the more favourable news from Persia and China. Both the Persian and the Turkish crops, it is said now, have been over-estimated. Our quotations are:—Good to fine Persian, 9*s.* 6*d.* to 10*s.*; for soft shipping (this has been least touched by the improved position), 8*s.* 6½*d.* to 9*s.*; fine druggists', 6*s.* 6*d.* to 7*s.*; second druggists', 6*s.* 3*d.* to 6*s.* 6*d.* per lb. The particular business this week has been

in ordinary qualities ranging between 6*s.* and 7*s.* per lb. Our correspondent writes from Smyrna, under date of July 16:—"Very little business has been done this month; the whole of it does not amount to more than forty cases tale quale at a reduction of about 2*d.* per lb. upon the June prices. The new opium is now beginning to arrive in quantity—the figures up to date being 567 baskets, against 634 last year. Notwithstanding the present very low opium prices, consumers are still refusing to touch the drug."

**PATCHOULY.**—Another arrival of fifteen bags West African patchouly-leaves has recently come to hand from Akassa per Angola.

**PEPPER.**—Dull and again lower for white. At auction today good *black* Singapore sold at 3*d.*; good to fine *white* ditto at 4½*d.* to 5*d.*; and fair white Penang at 3½*d.* per lb.

**POPPYHEADS.**—This year's crop has been rather small both on the Continent and here. Large Belgian poppyheads have been sold at 12*s.* 6*d.* to 13*s.*, and medium-sized ditto at 9*s.* per 1,000.

**POTASH SALTS.**—*Chlorate* is rather easier, and may be had at 6½*d.* per lb. f.o.b. Liverpool, for delivery from now till the end of the year, or at 6½*d.* per lb. for immediate delivery; *binorate* is held for 4½*d.* to 4¾*d.* per lb. for crystals, and 4¾*d.* to 5½*d.* per lb. for powder; neutral *oxalate*, 4½*d.* to 4¾*d.* per lb.; *permanganate* in small crystals at 62*s.* 6*d.* to 65*s.*, in large ditto at 67*s.* 6*d.* to 70*s.* per lb.; red *prussiate* may be had at 1*s.* 6*d.* per lb., and yellow English at 10½*d.* to 10¾*d.* per lb. Refined *saltpetre* is quoted at 20*s.* 9*d.* to 21*s.* 9*d.* for British, and 20*s.* 6*d.* to 21*s.* 3*d.* for German; *bichromate*, 4½*d.* per lb.

**QUASSIA-WOOD.**—Dull and stagnant market; 4*l.* 10*s.* to 4*l.* 15*s.* for new Jamaica logs.

**QUICKSILVER.**—The importers' price remains 7*l.* 2*s.* 6*d.*; while second-hand sellers are offering at 6*l.* 18*s.* per bottle.

**QUILLAIA** is still arriving in quantity, and prices continue to come down.

**QUININE.**—The last business reported consisted of about 15,000 oz. of second-hand German bulk quinine at 8½*d.* to 8¾*d.* per oz. The manufacturers now quote as follows:—Howards & Sons, 1*s.* 1*d.* to 1*s.* 2*d.* in bulk, 1*s.* 2*d.* to 1*s.* 3*d.* per oz. in vials; *Whiffen*, 1*s.* 0½*d.* in bulk, 1*s.* 2*d.* per oz. in vials; *Milan*, 11*d.* in bulk, 1*s.* 1*d.* in vials; *Zimmer & Jobst*, 11*d.*; and *Mannheim, Auerbach, and Bruuswick*, 10½*d.* in bulk. *Pelletier's quinine*, in 1 oz. vials is held for 1*s.* 7*d.* per oz.

**ROSE-FLOWERS.**—The crop both in Belgium and Holland is plentiful, but the quality is reported to be very indifferent. Sales have been made already, according to quality, at from 2*s.* 1*d.* to 3*s.* per lb.

**SAFFRON.**—There has recently been a very heavy fall in this article, and best *Valencia* came down as low as 20*s.* 10*d.* f.o.b.; since then, however, there has been a slight recovery, and we close at 22*s.*, f.o.b., for this quality.

**SARSAPARILLA.**—According to advices from New York Mexican sarsaparilla is very firmly held there. A small parcel of 10 bales arrived recently, but was almost immediately sold. There are orders for over 100 bales in the market, which could not be filled for want of supply. *Honduras* sarsaparilla is lower in London, having sold privately recently at 1*s.* 4*d.* per lb. for "Crown" brand.

**SEEDLAC.**—Thirteen packages clean bold red *Madras* sold at auction at 87*s.* 6*d.* per cwt.

**SHELLAC.**—The market, both on the spot and for speculation, opened quietly, but with a steady feeling, this week. Eight hundred and ninety-six cases were offered at auction on Tuesday. The market was languid, and, with some difficulty, 581 cases sold at irregular rates, *Second orange* being about 1*s.* per cwt. below the highest private rates of the week, while *Garnet lac* showed no change. The following prices were paid:—*Second orange*: Unworked, good to fine pale, slightly out of condition, 83*s.* to 85*s.*; ditto, cakey and livery to good bright flat, 75*s.* to 79*s.*; shivered livery, worked, 77*s.* to 78*s.* per cwt. *Garnet*: Rather curly and cakey unworked AC, 72*s.* per cwt. *Button lac*: Resinous block, third to first, unworked, 52*s.* to 76*s.* per cwt.

**SODA SALTS.**—*Nitrate* keeps fairly steady at 8*s.* 7½*d.* to 9*s.* per cwt., according to quality. *Soda Crystals* are worth 70*s.*

per ton landed here, or 67s. 6d. ex ship. The London makers ask from 67s. 6d., less 2½ per cent., and on the Tyne the price is 60s. f.o.b. For *Salicylate* in powder from 4s. 11d. to 3d., and in crystals from 6s. 9d. to 7s. 1d. per lb. is 5s. asked. *Bicarbonate* in kegs is worth 7l. 5s. per ton ex warehouse, or from 6l. 5s. to 6l. 15s. f.o.b. Liverpool, according to packing. *Bichromate of Soda* is held for 3¼d. per lb. *Caustic Soda*, 70-per-cent. is dull at 10l. 10s. on the spot, and 10l. 5s. f.o.b. Liverpool or Tyne; 60-per-cent. is quoted 9l. 2s. 6d. in Liverpool, and 76-77-per-cent., 11l. 10s. f.o.b. on the Tyne.

**SPERMACEIN.**—The market is reported rather better, with a fair amount of business among the candle-makers; 1s. 5d. per lb. is now asked for good refined.

**SULPHUR.**—Foreign flowers are worth 8s., roll 7s. per cwt., best thirds being offered at 93s. to 94s. c.i.f. terms. On the Tyne the quotation is 97s. 6d., f.o.b.

**TAMARINDS.**—There has been a further advance in new Barbadoes tamarinds, which were sold privately this week at 10s. 6d. per cwt. against 10s. per cwt. last week.

**TONQUIN BEANS.**—There has been something like a run upon this article during the last few days. It set in in Liverpool about a week ago, when speculators commenced buying up all the cheap *Pará* beans they could find. About 50 cases changed hands within a few days at rising prices—viz., from 1s. 4d. to 1s. 8d. for common foxy, and 1s. 9d. to 2s. 6d. for fair black to good frosted. The market closes with much higher prices, all the available lots in importers' hands having been cleared. New York also quotes higher rates; foxy *Pará* beans are held there at 1s. 10d. to 2s.; fair black and good frosted at 2s. 6d. to 3s. 6d.; while for fine genuine *Angostura* beans, 8s. c.i.f., and for mixed qualities 7s. is asked. Reports have been received to the effect that the new crop of Tonquin beans will not exceed 60,000 lbs., which is very much below the average. Of this quantity 15,000 lbs. have arrived in New York, and are held there at \$2.50 per lb. for *Angostura*. The remainder is reported to have been lost in the recent disturbances in Venezuela.

**TURMERIC.**—Sales of *Bengal* root are reported for arrival at 18s. per cwt., while the spot price is now 19s. 6d. to 20s. For fair to bright *Madras* finger, 30s. to 32s. is wanted, and in *China* turmeric sales are reported at 18s. per cwt. The market is firm and higher. At auction on Tuesday these rates were well maintained, and of 297 bags offered, 41 good split *Cochin* bnls sold at 8s. 6d. per cwt. Most of the *Bengal* root is held by one firm.

**WAX (CARNAUBA).**—Quiet and dull of sale, common grey and dark to good bright yellow being quoted at 45s. to 65s. per cwt.

**WAX (JAPAN)** keeps exceedingly dull. Sales of good pale squares are reported at 38s. 6d. per cwt. At auction on Tuesday a parcel was bought in at a nominal price.

### THE LIVERPOOL MARKET.

**BALSAM (COPAIBA).**—There is a further arrival of *Maranam*; it is firmly held.

**CANARY-SEED.**—Large sales have been made at prices ranging from 50s. to 55s. There are now no more sellers at the latter price.

**GINGER.**—*African* is held firmly at 31s. to 34s. per cwt.

**HONEY.**—Some holders of *Chilian* are asking rather better prices.

**IRISH MOSS.**—The new crop is arriving, and selling freely at 8l. 10s. to 13l., according to quality.

**OIL (CASTOR).**—Further arrivals have taken place. The market is depressed at 2¾d. to 2½d. per lb. for fine Calcutta seconds.

**QUILATA.**—Sales are reported at 16l. 10s. per ton.

### THE SMYRNA OPIUM MARKET.

(Telegram from our Correspondent.)

SMYRNA, July 27.

The position of the market is uncertain. Sales have been made this week of 15 cases of old crop current tale quale at 6s. 3d. per lb. f.o.b. The new Turkey crop is now expected to yield 8,000 cases.

### BRITISH AND FOREIGN CONSULS' REPORTS.

#### BRAZIL.

*A British Drug Company.*

Two manufactories (says our Consul at Rio Grande do Sul) are in course of construction in this city, one for the conversion of the fat produced in the country into soap, candles, oils, &c., and the other for using up the horns and bones of cattle in making combs, brushbacks, knife handles, &c.

The large and old-established English house of Hallawell & Company, wholesale and retail chemists and druggists, of Rio Grande and Porto Alegre, was turned into a Brazilian limited liability company in 1891 with a company of 500,000 milreis (about 25,000l. actual, or 58,000l. nominal, value). New branches are to be opened in Pelotas and other towns in the State, and factories of chemicals, &c., are to be erected.

#### JAPAN.

*The Drug Business.*

Yokohama imported 137,524l. worth of "Western" medicines and drugs in 1891, and 143,235l. worth in 1890. Among the chemicals and drugs imported the principal are bicarbonate of soda, caustic soda, soda ash, paraffin wax, bichromate of potash, chlorate of potash, carbolic acid, antifebrin, cocaine, bismuth, iodoform, iodide of potassium, quinine, &c.

*Demand likely to continue.*

Chemicals are likely to continue in demand. It is true that trials have been made to manufacture various chemicals, such as bicarbonate of soda, caustic soda, paraffin wax, &c., in Japan, but in most of these cases the cost of production has been too great to render the trials successful.

Soda crystals and bleaching powder only can be manufactured at a cost which is prohibitive of competition by the imported articles; but there are not many other articles at present imported in which competition from Japanese manufacture is likely to be felt—at least, in the near future.

The importation of chemicals is, for the most part, a venture of the foreign import merchant, Japanese dealers preferring to purchase from stock rather than run the risk of making purchases on contract.

*Want of Care!*

Carbolic acid is now imported mostly in tins or large zinc bottles, and it is found preferable to import quinine also in bulk, instead of bottles, owing to the saving effected in freight.

The greater part of the drugs imported now come from Germany. The loss of much of this trade to the British manufacturer can undoubtedly be traced to a want of care in packing, from which loss by breakage results, and to the fact that his get-up of the goods, in the matter of bottles and labels used, is neither so good nor so attractive as the Continental.

Some difficulty has been experienced, occasionally, in getting medicines passed by the Government analyst, on the ground that these are not chemically pure, although perfectly suitable for medicinal use, and such as would be passed in Europe. It may be hoped that longer experience may lead to more common-sense views in these matters.

#### MEXICO.

*Chemicals.* The industry of chemical products is not yet a large one in Mexico, considering that products like muriatic acid are so necessary. In the whole of Mexico there are not more than two factories of chemicals. One kilogram of native sulphuric acid sells at 14 cents, and it costs the Mexican manufacturer not more than 5 to 6 cents. The raw material is found in great abundance in the vicinity of the volcanoes.

### Memoranda for Correspondents.

*Always send your proper name and address: we do not publish them unless you wish: if you do not, please use a distinctive nom-de-plume.*

*Write on one side of the paper only; and devote a separate piece of paper to each query if you ask more than one, or if you are writing about other matters at the same time.*

*If you send us newspapers, please mark what you wish us to read.*

*Ask us anything of pharmaceutical interest: we shall do our best to reply.*

*Before writing for formulæ consult the last volume, if you have it.*

*Letters, queries &c., will be attended to in the order received.*

### Principals and Assistants.

SIR,—On account of the lengthy correspondence and discussion in your columns on this subject, we have arranged for one of the meetings of this Association to be devoted to it during the coming session. A friendly discussion, to which all principals and assistants interested are invited, will be opened on Thursday, October 27.

We are, Sir, yours truly,

E. F. HARRISON,

E. J. PARRY,

Hon. Secs. Chemists' Assistants' Association.

### A Trade Society.

SIR,—Well done, "gallant little Wales"! It is time, indeed, something was attempted, something done.

If I am not much mistaken, you some time since gave it as your opinion that "it was too late in the day to talk about protection." I do not agree with you, Sir, and I believe with "Wales" that, if a circular, setting forth our just claims, was submitted to every M.P., we should succeed in obtaining the sole right to vend drugs and chemicals—a right to which we are certainly entitled.

We are strong enough to carry such a measure through the House if we are but united, &c. I thank another of your correspondents for his suggestion that we should form a trade society which could easily and effectively bring about the above and other reforms. As matters stand, the Pharmaceutical Society is mainly representative of the "profession," and scarcely at all of the rank-and-file of the trade, as is proved by the said rank-and-file for the most part (about two-thirds of the whole, I think) boycotting the Society which, when appealed to on "early closing," distinctly stated "it did not take up trade questions."

As a unit I shall be glad to join and subscribe to such a movement, which may not be antagonistic to, but rather a help to, the Pharmaceutical Society, which by such means would be brought into touch with the bulk of the trade that at present feels itself unrepresented by the magnates of Bloomsbury Square.

I shall be glad to see these practical suggestions taken up, and to observe that a preliminary meeting is called to discuss them on an early date.

I am, Sir, your obedient servant,  
2 Malvern Road, Kilburn, W. M. BELL.  
July 26.

### Lead in Tartaric Acid.

SIR,—Referring to the admirable report in your last number of the proceedings that took place at the Woolwich Police Court with regard to tartaric acid, and to your editorial remarks under the heading of "Lessons from the Law Courts," I would venture to point out that you are inaccurate in using the terms "adulterated," or "adulteration." This is altogether apart from the merits of the case (which, as it is *sub judice*, I refrain from discussing); but it is quite certain that the presence of an ingredient, clearly

shown and admitted to be brought about in the recognised course of manufacture, cannot be called an "adulteration," and I would ask you to kindly correct this in your next issue, as the term is likely to give rise to misapprehension.

Yours truly,

1 Fenchurch Avenue,  
London, E.C.,  
July 26.

CHARLES WIGHTMAN,  
Chairman of Chemical Section,  
London Chamber of Commerce.

### Reduction in Patent-fees.

SIR,—Those of your readers who are interested in patents for inventions will be glad to know that, by virtue of a recent order of the Board of Trade, on and after October 1 next the following reduced fees will be payable in connection with the renewal of patents:—

#### On certificate of renewal:

| Before expiration of | 4th year   | 5th  | 6th  | 7th  | 8th  | 9th  | 10th | 11th | 12th | 13th |
|----------------------|------------|------|------|------|------|------|------|------|------|------|
|                      | 5l.        | 6l.  | 7l.  | 8l.  | 9l.  | 10l. | 11l. | 12l. | 13l. | 14l. |
|                      | instead of | 10l. | 10l. | 10l. | 15l. | 16l. | 20l. | 20l. | 20l. | 20l. |

#### On enlargement of time for payment of renewal fees:

| Not exceeding | 1 month | 1l. | instead of | 3l.  |
|---------------|---------|-----|------------|------|
| "             | "       | 2   | "          | 7l.  |
| "             | "       | 3   | "          | 10l. |

Yours faithfully,

MORNING CHAMBERS, REGINALD W. BARKER, R.P.A.  
King William Street, E.C.,  
July 27.

### English Assistants in Switzerland.

SIR,—Mr. Cave, in your last issue, informs your readers that the hours of English assistants in Switzerland are from 7 A.M. to 9 P.M., but out of that there is half an hour for breakfast, one hour for dinner, and the same for supper, to be subtracted from that time, which is not even mentioned in Mr. Cave's letter. Nor does he mention the usual weekly half-holiday. With regard to salaries he is about correct. But of what use is an English assistant in Switzerland for the first nine months if he cannot speak either French or German? Can he expect to take the same salary as in England?

Why do German assistants work for board and lodging only? Simply because it is a cheap and comfortable way of acquiring a language, and when they speak it fluently they leave the country in most cases, and do the same thing in England, if they are fortunate enough to find a situation.

In answer to the latter part of Mr. Cave's letter, concerning the average weekly hours, I refer him to Mr. Wilkie's letter from his neighbouring town, and which is nearer the mark; but ninety hours weekly is too absurd to criticise. Having been in daily contact with Swiss assistants for the past four years, I am in a position to bear out what I have said in this letter.

I am, Sir, yours truly.

PORC-ÉPIC.

81/15. *S. Harris*.—The action of ferrous sulphate on Sewage is to precipitate the matter held in suspension. It is also a feeble antiseptic, but it is its power as a precipitant which has made it valuable.

110/13. *Boom-de-Ay*.—(1) The mixture is the better for filtration, as the sediment does not contain any active ingredient. But the fact that it has been filtered should be noted in the prescription. (2) The vermin-killer does contain strychnine, but how much we do not know.

## LEGAL QUERIES.

Consult Alpe's "Handy-book of Medicine-stamp Duty" in regard to patent medicine questions.

General information regarding the laws affecting chemists and druggists is printed in THE CHEMISTS' AND DRUGGISTS' DIARY, 1892, pp. 161-5. For stamp duties, licences, Customs regulations, &c., see the DIARY pp. 151-9.

75/34 *Rhei*.—There is nothing illegal in your having a set of troy weights on your premises, if they are stamped. If not, the inspector may seize them, and summon you. If found in a shop, the law assumes that they are there for trade purposes, though it might be possible for you to satisfy a Court that this was not so.

75/28. *Nobo*.—If you form the partnership you propose, your unqualified partner will be liable to a penalty. Limited companies must be registered, and fees paid at Somerset House. The forms are obtainable from law-stationers. Effingham, Wilson & Co., Royal Exchange, London, publish a handbook on joint-stock companies law at 1s. 6d.

76/27. *Memo*.—The holder of the apothecary's qualification is entitled to sell scheduled poisons. This does not apply to the holder of the assistant's certificate, granted by the Society of Apothecaries.

77/71. *Thormin*.—A beverage containing over 2 per cent. of proof spirit becomes liable to Excise duty. There is no formula for the cordial on the page you refer us to.

77/61. *J. M.*—We do not know the rat poison you name. If it contains a scheduled poison it is illegal for unregistered persons to sell it. The same answer applies to the patent medicine named. But it is only the Pharmaceutical Council which can take action in regard to any such infringement of the Act.

77/59. *Opposition asks*:—"Can a physician and surgeon (American diploma) keep open shop in England for the sale of laudanum and other poisons?" The exemption of medical men from the restricting provisions of the Pharmacy Act applies only to those who have been registered as legally qualified practitioners. We presume the intention was to refer to registration in the United Kingdom. The American practitioner might claim that he had been registered as a legally qualified practitioner, and the Court might admit such a claim.

79/71. *W. H.*—You are liable to a penalty of 5*l.* under the Patents, &c., Act, if you represent that any article sold by you is a patented article when no patent has been granted for the same. (46 & 47 Vict. c. 57, s. 105)

79/66. *Palmerston* asks whether his cough-mixture, which contains a small quantity of aq. laurocerasi, but no other poisonous ingredient, needs to be labelled "Poison." Our correspondent points out that the water can scarcely be called a preparation of prussic acid, and that it is not so regarded legally is to some extent confirmed by the circumstance that essential oil of almonds containing prussic acid is specifically named. We think it could not be held that aq. laurocerasi is a preparation of prussic acid, though the case of ol. amygd. ess. is not conclusive, because that and "prussic acid" were named in the original schedule, while "preparations of prussic acid" were only added afterwards. But though aq. laurocerasi may not be a preparation of prussic acid, it is possible that the cough-mixture containing it is. The case is so doubtful, however, that "Palmerston" might reasonably take his chances if he is sure that his mixture is a fairly safe ore.

## MISCELLANEOUS INQUIRIES.

Inquirers will please read the "Memoranda for Correspondents."

A list of "Books for Chemists" is given in THE CHEMISTS' AND DRUGGISTS' DIARY, p. 317.

For all particulars regarding Educational and Examination matters refer to our issue of September 19, 1891.

Replies to queries are inserted according to the space open in any week, and insertion on any specific date cannot be guaranteed.

Back numbers of our weekly issue, containing formulae, &c., occasionally referred to in answers, can be obtained from the Publisher at 4d. each.

69/7. *Subscriber*.—(1) Animal charcoal will Decolorise Perfumes, and it is quite possible that it may remove or change the odour as well as the colour. (2) Lilac Perfume:—

|                                        |                 |
|----------------------------------------|-----------------|
| Vanillin .. ..                         | 4 grains        |
| Essential oil of violets .. ..         | 1 minim         |
| Extrait of orange flowers .. ..        | 8 oz.           |
| "  jasmine .. ..                       | 8 "             |
| "  tuberose .. ..                      | 4 "             |
| "  cassie .. ..                        | 2 "             |
| Tincture of storax .. ..               | $\frac{1}{2}$ " |
| Oil of citron .. ..                    | 10 minims       |
| "  bergamot .. ..                      | 10 "            |
| Essence of bitter almonds (1 in 23) .. | 4 "             |

Mix.

73/17. *Thorium*.—To Clean Dirty Castor-oil and Turpentine Bottles add 1 lb. of washing-soda to 10 gallons or so of boiling water, and soak the bottles in it for several hours, keeping the water warm. Use the brush well in cleaning. Make the second water warm, and add a few ounces of washing soda to 10 gallons, and finish off with cold water. The secret is to soak well in the first instance.

70/3. *Nemo*.—Try the Cement of litharge and glycerine for the stoneware jar-taps. Rub the litharge to fine powder, make into a paste with the glycerine, and use at once. It sets in a few hours.

72/64. *Antipyrin*.—The Use of Cocaine hypodermically in dental operations is sometimes followed by collapse of the patient. Nitrite of amyl to inhale and brandy to drink are the stimulants employed when this unhappy result ensues, and it is the wise men who are always ready for anything of the kind. The amount of cocaine hydrochlorate used is  $\frac{1}{2}$  grain dissolved in 8 minims of water. See THE CHEMISTS' AND DRUGGISTS' DIARY, 1890, under "Dentistry for Druggists," for particulars as to how it should be used.

72/68. *Bunsen*.—Essence of Herbs.—We presume that you mean by this an extract for making Herb Beer. The following formula has previously been published:—

|                         |         |
|-------------------------|---------|
| (1)                     |         |
| Fresh orange-peel .. .. | 6 oz.   |
| Ginger .. ..            | 1 "     |
| Boiling water .. ..     | 4 pints |

Infuse for an hour, and strain.

|                                  |           |
|----------------------------------|-----------|
| (2)                              |           |
| Treacle .. ..                    | 4 lbs.    |
| Burnt sugar .. ..                | 1 "       |
| Conc. infusion of chiretta .. .. | 12 c. z.  |
| Salicylic acid .. ..             | 2 drachms |
| Oil of bergamot .. ..            | 10 drops  |
| Rectified spirit .. ..           | 1 oz.     |

Mix the first three ingredients and the last three separately, add the latter to the former, make up to the gallon with the infusion, and set aside for a week to clear.

74/71. *F. A.*—The best Evanescent Ink is solution of iodine used on well-glazed paper.

74/28. *Iolo*.—We have published similar recipes to yours, which is good.

75/72. *J. P. R.*—Tincture of cudbear is a good and harmless colouring for medicated wine.

75/71. *R. A. M.*—See the list of hooks in the DIARY.

75/17. *Chlorine.*—You will find particulars in back volumes. Prices are sometimes peculiar.

75/5. *Pet (Ontario).*—(1) A Sachet-powder such as the following is good for use in gentlemen's wardrobes:—

|                            |         |
|----------------------------|---------|
| Powdered orris .. .. .     | 3viij.  |
| " cassia .. .. .           | 3i.     |
| " musk .. .. .             | gr. ij. |
| Oil of lavender .. .. .    | 5i.     |
| Otto of rose .. .. .       | gtt. x. |
| Oil of ylang-ylang .. .. . | gtt. v. |

Mix well.

We have published many others of a similar nature. (2) The best way to hide the bad smell of old bank-notes would be to sprinkle blotting-paper with the following mixture, put the notes between the sheets of paper, and keep there overnight:—

|                        |      |
|------------------------|------|
| Camphor .. .. .        | 5j.  |
| Thymol .. .. .         | 5i.  |
| Lavender-water .. .. . | 5ij. |

M.

75/13. *Jason.*—An ounce of coca-leaves to the pint of Malaga is the proportion generally followed in making Coca Wine. Keep for a month at least before filtering.

76/36. *M. R.*—Silver is Recovered from Sensitised Paper by incinerating the paper and heating the ash strongly, adding a little carbonate of potash to ensure that the silver compound is completely oxidised. Wash the residue with water when cold, and dissolve the silver residue in nitric acid, and crystallise. Your customer (an amateur photographer) should first consider whether his scraps of paper are worth working up. He must have a few bushels of the scraps before he begins.

76/33. *Carbon Bisulph.*—If you follow the B P. process for spt. ether. nit. up to the point of collecting the 14 oz. of distillate, it is obvious that you will get a sol. ether. nit. 1 3. But why "for veterinary purposes"? You may not mix the sol. ether. nit. with methylated spirit

76/25. *Rusticus.*—What have the stains in the black marble been caused by, and what do they look like?

76/16. *Spirits.*—Spiritus Odratus is eau de Cologne or anything like it.

72/43. *J. S.*—Your Musk Sachet perfume is simply ground rice perfumed with an alcoholic solution of artificial musk (musc Baur). The simplest way to make Penny Sachets of any perfume (heliotrope, white rose, &c.) is to make ground rice or bran the basis, and add a sufficiency of the respective essences. See our DIARY for 1891 for a collection of perfume formulæ.

73/20. *Voltas.*—Get Hargreaves' book on diseases of the generative organs (Kimpton, 5s.). See also DIARY for 1892, page 326.

73/38. *G. D. Coy.*—(1) Very full directions for Making Homœopathic Medicines are given in the British Homœopathic Pharmacopœia (Gould). This, or "Keene & Ashwell's Companion," you will find generally useful in homœopathic matters. (2) See December 20, 1890, page 863. New formulæ are always welcome, and we should be glad to have yours.

73/47. *Chlorine* would like to have the opinion of our readers regarding the making of Acet. Scillæ. The B.P. gives no direction as to whether, after filtering, you should make up to a pint or not, in the absence of directions. He has not altered the quantity after filtering, but as he finds the quantity of filtrate varies he would like to know what is generally done. Attention has already been called to this point. See THE CHEMIST AND DRUGGIST, January 26, 1889, page 105. We shall be glad, however, if a number of our subscribers who are making acetum scillæ during the next fortnight would each send us a postcard with the following particulars:—

Quantity of acetum made.  
Volume of the filtered acetum.

Also, if possible—

Specific gravity of the acid. acetic. dil. employed.  
" " of the filtered acetum scillæ.

This will give nice practice to senior apprentices, and if their masters are good enough to overlook them and check the results the postcard inquiry should prove very interesting.

(2) For 2 drachms of magnesium citrate take 110 grains of citric acid and 76 grains of light carbonate of magnesia. (3) The action of the excess of alkali in the liq. sodæ chlorinat. on the organic matter of the filter may have caused the yellowish coloration, or it may be due to a trace of iron. It is better to decant.

197/92. *G. Y.*—Coca Wine.—The Excise authorities have stated that they do not regard a wine containing less than 1 grain of cocaine per oz. to be medicinal, but it is probable that a wine which is distinctly unpalatable would be passed if made from the leaves, although it contained less than 1 grain of cocaine per oz. The authorities apparently put cocaine and quinine on the same footing. We presume that by vin. cinchon. Malaga you mean a wine made from cinchona. If such a wine contained 1 grain of alkaloids per oz it would probably be passed by the Excise as one which can be sold without a licence, but this is a point upon which you should communicate with Somerset House.

81/66. *Patent.*—The most commonly sold soothing-powder is one composed of—

|                              |        |
|------------------------------|--------|
| Hydrarg. subchlorid. .. .. . | gr. j. |
| Sacch. alb. .. .. .          | gr. j. |

M.

This for a child of twelve months, and a half for one between three months and nine months. This powder is an aperient; for simply cooling the best powder is—

|                               |          |
|-------------------------------|----------|
| Pulv. potas. chlorat. .. .. . | gr. iss. |
| " sacch. alb. .. .. .         | gr. iss. |
| " glycyrrhiz. .. .. .         | gr. ss.  |

M.

81/8. *Pacific.*—(1) Bismuthous oxide, Bi<sub>2</sub>O<sub>3</sub>, is a yellowish powder; bismuthic oxide, Bi<sub>2</sub>O<sub>5</sub>, a red. Salts of the higher oxide are unstable and rare. (2 and 3) Read the paper on volumetric analysis in our issue of September 26, 1891, page 479. All the information which you want is given there.

80/66. *Gingerine.*—Yes; the British Pharmacopœia directs syrup of ginger to be made up to a pint. But why not refer to the book itself for questions of that nature? It is a pity to waste your stamps and our time.

#### Information Wanted.

## MEMORANDUM.

"ESSENTIAL

LONDON."

From

SAM<sup>L</sup>. LAMBERT & CO.,

132 FENCHURCH STREET,

LONDON, E.C.

To

The Publisher, "C. &amp; D.,"

42 Cannon Street, E.C.

30th July, 1892.

Your repeated applications to us—re advertising—need a reply. In the first place we do business, either directly or indirectly, with all the largest Drug firms, and therefore we should only be "gilding refined gold" to advertise for their business; but if by chance we have missed a few good houses, we may say for their benefit that we represent Schoellkopf, Hartford & MacLagan, Ltd., of New York (who hold the leading position in American Drugs, &c.); Fratelli de Pasquale & Co., of Messina, whose Essences are favourably known (we have held their agency for 18 years); the W. A. D. Co.'s Sandal Wood Oil (which, by-the-bye, we cannot offer for prompt delivery just now); and lastly, that we can do Drugs, Oils, and Chemicals in market quantities and original packages against any fair-trader of whatever nationality in this City.

# THIOCAMF

## PATENT DISINFECTANT

By **PROFESSOR EMERSON REYNOLDS, M.D., F.R.S.**

And recommended by the Disinfecting Committee of the House of Commons.

# THIOCAMF

Is a liquid combination of Sulphur [*thion*] Dioxide, Camphor, and several other powerful Aromatic Disinfectants. It is easily preserved in bottles without pressure at ordinary temperature; but it possesses the remarkable property of giving off large volumes of the most effective germicides, in the form of gas and vapour, by mere exposure to the air of a room, or, more rapidly, when warmed. Hence Thiocamf is a true Atmospheric Disinfectant.

But its use does not end here, as the fragrant whitish residue, rich in camphor, which is left after the evolution of all gas from Thiocamf, is an effective mixture of strong but non-poisonous disinfectants. This residue from a bottle of Thiocamf, rubbed to powder, and well stirred with two gallons of warm water containing a little "washing soda," is used with soap for washing floors, woodwork, clothes, &c.

The basis of this novel disinfectant is the bineau liquid which results when sulphur-dioxide gas is brought in contact with camphor. At ordinary temperatures the gas alone requires a pressure of more than two atmospheres to liquefy it; but camphor, owing to chemical attraction, can liquefy the sulphur-dioxide gas without any pressure whatever. In this liquid are dissolved several known bactericides; therefore Thiocamf is *all* disinfectant; but I am not free to enter into further particulars, as the patent specification has not yet been published.

PROFESSOR REYNOLDS says:—"There is no other material that I know of save Thiocamf which can give off so large a relative volume of sulphur-dioxide gas (the contents of a small six-ounce bottle can afford over 20,000 cubic centimetres) without any special treatment, save exposure in a very thin layer on an old tray or dish to the air of a room to be disinfected. Further, one ounce of Thiocamf shaken up with a quart of water forms a powerful disinfectant for ordinary purposes, such as sprinkling over various matters, purifying drains, &c.; while a still more dilute solution (one ounce to a gallon) can be used for soaking clothes which have been in contact with infected persons."

# SCHERING'S PIPERAZINUM PURUM

(PATENT).

**NON-TOXIC AND NON-IRRITANT.**

Readily soluble in water. It dissolves Uric Acid concretions twelve times more freely than Lithia Carbonate.

**Is indicated in all cases of Gouty Affections, and in Stone or Gravel of the Bladder and Kidneys.**

For literature see "The Therapist," Vols. I. and II., published by Aug. Siegle, 30 Lime St., London, E.C.

PIPERAZINE may be obtained in Crystals wholesale at **17/6** per oz. net, or in 1-GRAMME COMPRESSED TABLETS, pure, without any admixture, Schering's own manufacture, at **7/6** per dozen gramme Tablets.

**Minimum Dose—1 Gramme or 15 Grains per day in a Pint of Water.**

This may be divided into two or three portions during the day.

# PHENOCOLL HYDROCHLORIDE

(PATENT).

**NON-TOXIC, AND HAS NO EFFECT ON THE HEART.**

This is a preferable analgesic having no toxic effects, nor does it interfere with the circulation of the blood, nor the heart, nor does it reduce the temperature below normal.

**Is indicated in all cases accompanied by feverish symptoms, particularly in Rheumatism, Neuralgia, and similar ailments.**

**MALARIAL FEVER YIELDS TO NO OTHER REMEDY SO WELL.**

For literature refer to "The Therapist," Vols. I. and II., published by Aug. Siegle, 30 Lime St., London, E.C.

To be obtained Wholesale at **3/6** per oz. net.

# THE SALICYLIC ACID

RECENTLY INTRODUCED BY

**DR. HENRY BYK, BERLIN.**

EVER since Salicylic Acid has been prepared by synthetical methods the question has been raised at different times as to the quality of the product, especially as compared with the compound that is obtained from natural sources. All this has done so much to throw into prominence the importance of purity in the acid that this point need not be further emphasised here.

## The solution of the question

as to whether a certain brand of Salicylic Acid be pure—whether considered by itself or compared with the acid distinguished as “natural”—may be reached from two different directions, namely, from its physiological and its chemical sides.

As regards the former it has been already shown that Salicylic Acid can be prepared by the synthetical process, which in its physiological action is undistinguishable from the natural product.

Again, the problem has been recently approached from the purely chemical point of view in a research upon

## Dr. Byk's Salicylic Acid and preparations,

carried out by H. Helbing and Dr. F. W. Passmore, and described in a number of “Helbing's Pharmacological Record.” The work of the authors is the more interesting as it has thrown fresh light upon what has been called The Salicylic Acid Question, and furnished additional proof not only that the chemist can imitate the processes of Nature in the laboratory, but also that products can be turned out on the large scale equal in purity to those elaborated in the vegetable world.

It is well known that the impurities most likely to be present in Salicylic Acid prepared synthetically are the bodies classed together under the name cresotic acids—bodies closely allied to salicylic acid itself but differing from it in various chemical and other properties.

The authors of the research referred to examined Dr. Byk's Salicylic Acid and preparations especially for these commonly associated substances and found them

## Perfectly free from allied foreign acids,

and capable of standing all the most stringent tests of the Pharmacopœias. It was shown indeed by the melting-point to be superior to the acid described as the standard in the British Pharmacopœia, the range within which the acids melted—both those examined as such and that isolated from the preparations—amounting to merely some fractions of a degree.

Since the presence of the cresotic acids referred to has a marked influence in depressing the melting-point, this factor alone indicated the great purity of Dr. Byk's Salicylic Acid.

A number of other tests were applied to the preparations, which corroborated the indications obtained from the observations alluded to above and established the freedom of the preparations from inorganic as well as organic impurities. The conclusion is stated in summing up that Dr. Byk's Salicylic Acid is perfectly pure and

## Identical in chemical composition with the best specimens of Natural Acid

prepared from oil of wintergreen, thus reaching, as already intimated, from a chemical point of view, the same result as had been already arrived at from the physiological.

## SPECIALITIES FOR INDIA.

# SOUTHALLS' MOSQUITO CONES

**EACH BOX GIVES TWENTY-FOUR QUIET NIGHTS' REST.**

*The only Remedy which has been found effectual in securing immunity from the attacks of Mosquitos and other venomous insects.*

By burning one of SOUTHALLS' MOSQUITO CONES in the room before going to bed,  
**PERFECT REST AND UNDISTURBED SLEEP ARE INSURED,**  
 as the fumes from the Cones drive away, stupefy, or kill all insect life, thus rendering  
**MOSQUITO CURTAINS QUITE UNNECESSARY.**

*EVERYONE should use these fragrant Pastilles, and thus escape the persistent attacks of these merciless torments, the painful and distressing bites of which so often disfigure the face and hands, and destroy the complexion.*

These Cones are composed entirely of Aromatic Plants, carefully selected for their insecticidal properties and although destructive to insects, they are quite harmless to men and animals. The odour when burning is very agreeable, and hence they may be used to fumigate sick-rooms, as the most delicate invalid can support the fragrance. They can be used, also, in Greenhouses, where they are an excellent preventive of blight, or a cure for plants which have already become affected.

### A LARGE CONE EXPRESSLY PREPARED FOR STABLES, &c.

For clearing stables, outhouses, kennels, &c., from Mosquitos, Flies, Lice, and all insect pests. Composed entirely of aromatic ingredients, and harmless to animals, though fatal to insect life.

The Cones should be kept in a dry place, and when required for use one should be placed upon its base on a small dish or saucer and lighted at the tip. Once well lighted it will burn continuously. On account of its readily combustible nature, care should be taken that the dish is placed where it is not liable to be upset by the inmates of the stable.

**ABSOLUTE FREEDOM FROM INSECT LIFE IS INSURED BY THE USE OF THESE CONES.**

Price per dozen Boxes of the Cones, **7/6**; for Stable use, **9/-** doz.

## SOUTHALLS' DEPILATORY SOAP.

A NEW INVENTION, SPECIALLY PREPARED FOR THE INDIAN MARKET.

**For Removing Superfluous Hairs, without Pain, from any part of the Body.**

### SOUTHALLS' DEPILATORY SOAP

is perfectly harmless, clean in its effects, and is not irritating even to the most delicate skin; ladies, therefore, need have no fear of using it.

### SOUTHALLS' DEPILATORY SOAP

is of a soft consistence, smooth, very easy to apply, and perfectly free from any of the disagreeable odours which render the ordinary depilatories so objectionable.

### SOUTHALLS' DEPILATORY SOAP

does not cause painful eruptions and sore places, and thus differs from other depilatories, which are quite unfit for the special purpose for which they are intended.

*Sold in Stoppered Glass Jars, with full directions for use, price **12s.** per dozen.*

MANUFACTURED ONLY BY

## CHLOROFORM

(DUNCAN'S).

PREPARED FROM PURE AND METHYLATED SPIRIT.

Also CHLOROFORM (BLUE LABEL).

Put up in all sizes of bottles. A strap with Name and Trade Mark of the Firm is placed over the stopper of each bottle. For Export, in stoppered bottles, securely luted, and in hermetically sealed flasks when required.

N.B.—We guarantee all the above CHLOROFORMS to be PURE CHLOROFORM, answering all the tests of the British Pharmacopœia.

## FLEXIBLE GELATINE CAPSULES.

### CASCARA SAGRADA CAPSULES.

Each Capsule equal to  $\frac{1}{2}$ ,  $\frac{1}{4}$ , or 1 teaspoonful of Fluid Extract of Cascara Sagrada. They can also be had in combination with  $\frac{1}{2}$  or 1 grain of EUPONYMIS. In Boxes at 1/6 and 2/6; 14/- and 24/- per dozen. (Also in Bulk.)

### BLAUD'S PILL CAPSULES.

In 3 sizes, equivalent respectively to 1, 2, or 3 Bland's Pills.

These Capsules differ from all others, and have advantages which no others possess. They are made from Pure Unoxidised Carbonate of Iron by a special process. They are so prepared that, while they retain indefinitely the full efficacy of fresh Bland's Pills, they have no tendency to become hard and insoluble by keeping, as the pills often do. They are small in size. Owing to the special process adopted by D. F. & Co., the 3-pill Capsule is hardly larger than a single Bland's Pill. They are soft and flexible, and much more easily swallowed than pills.

They can be had in combination with Arsenic, Nux Vomica, &c. In Boxes at 1/-, 1/9, and 2/6; 8/-, 15/-, and 22/- per dozen. (Also in Bulk.)

"The administration of nauseous as well as unstable drugs in the form of Flexible and Soluble Gelatine Capsules has found favour with many, and a well-known firm like Messrs. DUNCAN, FLOCKHART & Co. are sure to devote great care to the preparation of medicaments of this kind. An illustration of this is afforded in the case of the Bland's Pill Capsules, which of course should contain as far as is possible the Iron in the proto or ferrous condition. On examining a Capsule made by this firm, and said to contain the equivalent of three pills, we found that of the total amount of Iron present 92 per cent. was in the form of proto-carbonate."—*Lancet*, 23rd May, 1891.

"We have received from Messrs. DUNCAN, FLOCKHART & Co., EDINBURGH, a number of samples of Capsules containing various pharmaceutical preparations. They are very soft and flexible, and can be easily swallowed. The Capsules containing 1, 2, and 3 Bland's Pills respectively are not much larger than ordinary pills. A chemical examination of their contents shows that the Iron is in the ferrous condition, and therefore that these Capsules retain the full efficacy of fresh Bland's Pills."—*British Medical Journal*, 11th April, 1891.

### EASTON'S SYRUP CAPSULES.

Each Capsule equivalent to 20, 30, or 60 minims of Easton's Syrup.

In Boxes at 1/-, 1/9, and 2/6; 10/-, 17/-, and 24/- per dozen. (Also in Bulk.)

## SYRUP. HYPOPHOS. COMP. (Duncan's.)

Some time since we had several samples of well-known SYRUP. HYPOPHOS. COMP. analysed by Mr. D. B. DOTT, F.R.S.E., F.I.C., Ph.C., and in no one case did he find so large a proportion of the active constituents as is found in our preparation by a precisely similar analysis—which analysis is an absolute proof that the proportions of the different ingredients which we state are in our Syrup ARE ACTUALLY PRESENT. We, therefore, submit that from the use of our Syrup the best results may be confidently anticipated.

In proof of our statements we enjoin the report of Analysis referred to.

NOTE.—Our Syrup will darken in colour by lengthened keeping; and so must every Syrup which contains a similar proportion of FERROUS Hypophosphite.

"Analysis of SYRUP. HYPOPHOS. COMP. (grains per drachm)."

# WYETH'S BEEF JUICE.

A Liquid Preparation of the CHOICEST BEEF, containing the Nutritious Albuminous Principles in an unaltered and soluble form.

## READ THE FOLLOWING

*From*

## THE LANCET.

LONDON: SATURDAY, APRIL 30, 1892.

### Analytical Records.

#### WYETH'S BEEF JUICE.

(JOHN WYETH AND BROTHER, PHILADELPHIA.)

"The following analytical notes and results testify unmistakably to the excellence of this preparation. It is a dark reddish-brown liquid of pleasant beef-like flavour, and free from objectionable preservatives. It contains not only the albuminous principles of beef in an active and soluble form, but in the condition in which they occur in the freshly expressed juice of beef itself. Viewed with the spectroscope a dilute solution is seen to give two absorption bands, characteristic of fresh blood or hæmoglobin. The liquid loses this property, however, as soon as it is boiled; while the coagulated albuminous principles assume a blood-red tint. According to our experiments no less than fourteen grains of solid albuminous principles in every fluid ounce are thus precipitated. The following figures gained in analysis will convey some idea of the eminent degree of concentration through which this preparation has been carried. Notwithstanding this, the vital elements of beef juice it contains have been preserved unchanged. Moisture, 44.87 per cent.; organic matter, 38.01 per cent.; mineral matter, 17.12 per cent. The organic materials contain 4.57 parts of nitrogen, and the mineral matter consists largely of common salt and, of course, soluble phosphate. Results like these make it safe to assert that as an example of preparations of this class Wyeth's beef juice is little short of perfection."

MANUFACTURED BY

## JOHN WYETH & BROTHER

PHILADELPHIA, U.S.

LONDON—30 SNOW HILL, E.C.

A Two-ounce Bottle  
of Pure  
Juice of Meat.

Actual test will show

# NOTTINGHAM.

THE age in which we live has truly been said to surpass all others in Progress and Reform, and on the occasion of an anniversary such as the meeting of the British Medical Association it is both interesting and instructive to note the amount of improvement since the last meeting.

During the past few years, and especially since last year's Congress at Bournemouth, very great strides have been made in the Science of Therapeutics, both in Drugs and Dietetics. In the former we see the greater tendency to simplicity, and the nearer approach of that era foretold twenty-four years ago by Dr. B. W. RICHARDSON when we shall manufacture in our laboratories drugs which will produce any effect we may desire. We note also that prescriptions, which some years ago comprised a small "*materia medica*" in each, now often contain only one remedy, modified, if necessary, by the addition merely of a flavouring agent.

In Dietetics the advance is even greater, and we are now looking forward to the time when, as suggested by the late Dr. MILNER FOTHERGILL, there will be a Chair of Dietetics attached to every medical school. We see signs of progress in the excellent additions to the literature of this subject in the recent works of Drs. YEO and ZIEMSEN, and also in the great number of attempts which are evident in all directions to produce a perfect food. From the COURT CIRCULAR (London) of April 9th last we clip the subjoined extract:—

"It is related that during the illness of H.R.H. the late Prince LEOPOLD the usual question arose with regard to supplying a maximum amount of supporting food-stuff with the minimum digestive strain. To meet this the renowned physician the late SIR WILLIAM GULL ordered the following:—A fresh leg of mutton was to be plunged into boiling water for a short time, which, whilst coagulating the albuminous substances of the exterior, so changed the fibres of the internal portions that when the joint was scored deeply to the bone the muscle-juice freely escaped and was collected. This being carefully carried out, a good supply of highly nutritious and easily assimilable meat essence was obtained, and from which

HIS ROYAL HIGHNESS

derived considerable support. The value of such an extract to an invalid is obvious, but it is not within the reach of those whose means are moderate; it therefore occurred to someone that similar juice might be obtainable from beef-steak by an ordinary lemon-squeezer, which, whilst coming within the reach of ordinary pockets, would still have all the nutritive properties of the leg of mutton, but also the additional valuable hæmatin or blood-forming substance present in such abundance in beef-muscle. Upon putting it to test it

was found that each pound of fresh steak yielded about half a fluid ounce of muscle-juice, but this varied greatly with the quality of the meat, and the care taken during the expression. Apart from the uncertainty of the results, the somewhat tediousness of the process, the very limited 'keeping' property of the juice, led to a search for a more economical substitute. Hearing of Caffyn's Liquor Carnis we, through the kindness and courtesy of Mr. Shepperson, the company's managing director, were enabled to see a perfection of the principles advocated by

SIR WILLIAM GULL

in the laboratories of the Liquor Carnis Company, which are close to Smithfield Market, E.C., but with additional advantage—viz., that the beef-juice, after collection, is so dealt with by the addition of a perfectly harmless food substance that it will keep for an almost unlimited time. By means of powerful hydraulic pressure, up to 400 tons, juice is produced with a far greater economy than any domestic appliance can ever attain. As the rich red fluid escaped from the presses, without any unnecessary exposure to the air, it was quickly dealt with in accordance with Caffyn's patent, and transferred into bottles. On tasting this clear crimson extract as it escaped we were immediately impressed with its characteristic 'raw-meat' flavour, so different from cooked meat, and which only those who have the trouble to judge for themselves can appreciate. It was, in fact, *raw meat in a fluid state*, for on emptying the press only some masses of friable, pale, fibrous substance remained to represent the hundredweight of choice fresh beef which was introduced in the first instance. Such is the meat-juice, or Caffyn's Liquor Carnis, prepared by a process as simple as its principles are sound, and of which a small bottle represents the available nourishment of several pounds of

ENGLISH BEEFSTEAK,

and at about one-third the cost. By this means we get the nourishment from beef without the indigestible fibre, gelatine, &c."

Of all the Beef extracts which have been produced one has succeeded in winning approbation from all who have given it a fair trial, and that one is Caffyn's Liquor Carnis. This preparation, containing pure cold-drawn Beef-juice, is one obviously well adapted for all the various diseases in which a small quantity of highly nutritious food is required, and it has been made up in some most useful and agreeable forms:—Malto-Carnis (cold Beef-juice combined with Extract of Malt) and a Jelly of Pure Beef-juice (Jelly Carnis); while within the year Suppositories of raw Beef-juice (Carnis Suppositories—Caffyn) also have been prepared, which are invaluable for Rectal Alimentation.

In conclusion, we might add that Caffyn's cold-drawn Beef-juice Foods are prepared from home-killed beef only, at the Company's Laboratories, which are quite near to Smithfield Market, London.

# ARMOUR'S FORMULARY

FOR

## Digestive and Pepsinated MEDICINAL PREPARATIONS.

THE OBJECTS OF THIS FORMULARY ARE:—

- (1) To provide English Pharmacists with a series of proved, and therefore reliable, formulæ for the preparation of the Digestive Ferments.
- (2) To show how Armour's Digestive Ferments may be utilised to the greatest advantage in the preparation of elegant compounds such as have hitherto been mainly specialised.

Containing formulæ for the preparation of Pepsin of Official B.P. strength, Essentia Pepsin, Vinum Pepsin, Liqueur Pepsin, &c., &c.

COPIES of this interesting little work mailed free to Chemists on application.

# PURE ESSENTIAL OILS

**W**E desire to draw the especial attention of the trade to the numerous additions of Essential Oils of exceptional quality recently made in our Price List.

For some time past we have endeavoured to produce qualities of Essential Oils greatly superior in character to anything previously placed upon the market, in order to supply the natural want of those consumers whose sole object is to obtain articles of exceptional fine quality irrespective of price. To obtain our desire we have thoroughly studied the methods of cultivation and production with the result that we are now offering Essential Oils excelling in all the necessary qualities—pungency, strength, and aroma. We append a List of the Oils above alluded to:—

## Drawn at our Works at HACKNEY.

### OIL ANISEED.

- " CARAWAY, from selected English Cultivated Seeds. (The quality usually sold as English drawn is from Dutch Seed.)
- " CARDAMOMS.
- " CEDAR WOOD.
- " CINNAMON, from the Finest Selected Bark.
- " CLOVES, AMBOYNA, from Amboyne Cloves.
- " COPAIBA, from Para Balsam.
- " CORIANDER, from selected English Cultivated Seed. (The quality usually sold as English drawn is from the German Seed.)
- " CUBEBS, from selected Cubebs freed from Stalks.

### OIL GINGER, from finest Cochin Ginger.

- " HOPS, from Kentish Hops.
- " JUNIPER, from selected Berries.
- " NUTMEGS, from sound selected Nutmegs.
- " LAUREL LEAVES. We are the only drawers of this Oil.
- " PATCHOULI, from selected leaves only, freed from stems.
- " SANDAL WOOD, from specially selected Mysore Logs, of direct importation.
- " SASSAFRAS, from selected logs.
- " VERTIVERT (Cus Cus). We are the only drawers of this Oil.

## Drawn at our Works at MITCHAM.

*(From Plants cultivated in the neighbourhood.)*

POTTER & MOORE, ESTABLISHED 1749.

### OIL CAMOMILES.

- " LAVENDER.
- " PEPPERMINT, from White and Black Plants.

### OIL SPEARMINT.

- " VERBENA.

## Drawn at our Works at GRASSE.

### OIL LAVENDER, from cultivated Plants and doubly rectified.

- " NEROLI.
- " PETIT GRAIN.

### OIL ROSEMARY, from cultivated Plants.

- " THYME, from cultivated Plants.

## Manufactured at our Works at SICILY.

OILS LEMON AND ORANGE, absolutely pure, and from selected Fruit.

OIL BERGAMOT, from sound and selected fruit, absolutely genuine produced at our New Works, San Ferdinando, Calabria.

# HEWLETT'S MIST. PEPSINÆ CO. C. BISMUTHO.

Highly recommended in various forms of dyspepsia, having a direct action upon the mucous membrane of the stomach and intestines as a sedative. It can be administered with marked and almost instantaneous effect in the irritative form of dyspepsia, more especially when *pyrosis* is a conspicuous symptom, and pain occurs an hour or more after food. In simple neuralgic gastric pain following eating, occurring in feeble subjects, it is especially indicated, and even in *carcinoma* it has been used with great success in alleviating pain and vomiting.

In the dyspepsia of patients dependent upon some organic disease, and where there is a decided loss of nerve power, it is of singular service. Thus, for instance, a person after a meal complains of a peculiar gnawing and emptiness, with slight pain at the epigastrium, evident signs of general relaxation and loss of nerve power, clinical experience has shown that it is of great service as a tonic and stomachic. A portion of its value arises, it may be, from its action upon the spinal motor nerve centres. Be these things as they may, experience has abundantly demonstrated the value of the compound as a stomachic, anti-dyspeptic, and tonic, in general functional atony and relaxation, and in the various forms of dyspepsia, constipation, or diarrhoea, connected with atony of the visceral muscular coat, the Mist. Pepsinæ Co. c. Bismutho is a very valuable remedy. In the *exhausting purging of Phthisis*, accompanied with night sweats and restlessness, Dr. MATHEWS, of Nantwich, has used it with marked and appreciable effect.

Price (in England) 10s. 6d. per pound.

Physicians will oblige, when ordering Mist. Pepsinæ Co. c. Bismutho, by writing, "Mist. Pepsinæ Co. (Hewlett's)."

Packed (for Dispensing only) in 10-oz., 22-oz., 40-oz., and 90-oz. Bottles.

LONDON MEDICAL RECORD REPORT.  
MISTURA PEPSINÆ COMPOSITA CUM BISMUTHO.

"This combination of Messrs. HEWLETT'S is one which has been extensively tested, and with good results. It is justly popular in the profession as a very valuable and effective combination. It serves not only to improve *aspepsia*, but to lessen the gastric pain and to facilitate difficult and painful digestion, without setting up any evils of its own. It is a very good crutch for persons of weak stomach to lean on."—January 15th, 1881.

# TRADE OPINIONS.

"Electric Avenue, Brixton, S.W.

"July 25, 1892.

"DEAR SIR,—You will be pleased to learn that the sale of your Specialities has greatly exceeded my anticipations, and your own estimate, already (within twelve months) I am returning at my two shops over

"£280 per week.

"Dispensing is most satisfactory, but the popularity of your own goods, those you supply to run against Patents, and the energetic manner in which you have advertised them, have made my business. Being protected from competition in all your lines, I get good all-round profits, and think your Co-operative Agency system only requires to be known in order to be adopted by one of the best Chemists in every locality.

"Faithfully yours,

"W. PARKE.

"Messrs. Lorimer & Co."

"90 Western Road, Brighton.

"January 14, 1888.

"Messrs. Lorimer & Co.

"GENTLEMEN,—We have pleasure in informing you that, having tried the Citrate of Magnesia, of all the makes that have been offered to us, taking Bishop's as a standard, we find yours to be the only one comparing favourably with the same, and that it quite equals, if not surpasses, it.

"Yours truly,

"HEADLAND & CO., Chemists."

From "Trade," of January 21, 1888.

"To begin with, it is now admitted throughout the trade that everything coming from the well-known house in Britannia Row may be relied on as absolutely pure and the best of its kind. It will be delivered, too, where possible, in an attractive form, all the latest improvements in this respect having been adopted by the firm. An experienced F.C.S. superintends the laboratory work. The firm prepare all their essences and extracts in vacuo, and have a special staff and room for pill-making. From their scaling-room they can turn out 1 000 ounces of citrate of iron and quinine a day, while the granulating-rooms are fitted with white glazed tiles to ensure cleanness, and will work up to 1 ton per day, the average output of the firm during the summer."

From "The Chemist and Druggist," January 28, 1888.

"For some years Messrs. Lorimer & Co. have been building up a business in the manufacture and elegant presentation of put-up articles more or less closely allied to pharmacy. They seem to have hit the mark when such things were particularly wanted, and it must, no doubt, be admitted that they have met the want with skill and judgment, for their products, which were at first turned out on a small scale, are now manufactured by the ton, and packed and sold in such bewildering quantities that they have been compelled to exchange their old premises in the Hargrave Park Road for much more spacious ones in Britannia Row, Islington.

"The centre is occupied by a series of vacuum pans and a hydraulic tincture press. Essence of Vanilla is manufactured and kept there in quite astonishing bulk, several hundreds of gallons being always retained in stock in order to ensure a well-matured essence. Pepsine Wine and Quinine Wine also hulk very largely in this department. Coca Wine is a newer interloper, but is advancing in popularity, we are told, very satisfactorily. In this room the compound syrup of hypophosphites is also manufactured. The tincture-room opens into a laboratory devoted to the manufacture of extracts, infusions, sal volatile, spirit of nitre, decoction of sarsaparilla, and Parrish's Chemical Food.

"On the upper floor of the building, in different sections, girls are at work bottling and packing popular drugs, medicines, flavouring essences, sauces, and other specialities of the firm. In one department the packing of various powders is carried on, and elsewhere pills are being manufactured and coated under the direction of a qualified pharmacist.

"Obviously the stock of drugs and chemicals for all these preparations has to be a very extensive one, while the variety and the number of bottles and other enclosures is immense. We left the establishment with a considerably enhanced respect for the trade in put-up articles."

From "The British and Colonial Druggist," May 26, 1888.

"We found in several rooms a number of the staff engaged in bottling various galenicals and drugs in everyday use for retail. This is another special line of the house, and it is believed that the system of hnying goods bottled in the sizes for which there is most demand will eventually supersede in a large measure the old plan of purchasing in bulk and doing the bottling in the pharmacy. The firm do an immense trade in these goods, and showed us some orders in their books that would amaze those who have but a slight idea of the extent to which they are consumed."

The "Home and Colonial Mail," December 12, 1884.

"These preparations, which are worthy the reputation of the firm, seem specially suited to the requirements of the Export Trade. They are strongly packed, and, although meant to bear the strain of up-country journey, are most artistically wrapped and labelled.

The "British Trade Journal," January 1, 1885.

"All of these we have carefully examined and find to be of the highest excellence of quality; besides this, there are additional advantages which make their sale a matter of comparative ease. They are very neatly done up, the bottles being covered with artistic labels, the general design and finish of which are superior style."

"The Chemist and Druggist," January, 1885.

"The style of the get-up is very handsome, and the quality of the ingredients seems to be unexceptionable."

From the "Supplies' Journal," August 15, 1884.

"Specialities possessing distinguished characteristics that have met with the most cordial acknowledgements of their merits from competent judges and from all who have given them a trial. The firm make it their principal object to produce the very highest class of articles at the lowest prices consistent with the preservation of quality. The constituent elements of their productions are plainly and explicitly stated, the purely 'quack' element of secrecy being rigorously avoided."

"Alexandra Palace,

"September 21, 1882.

"J. LORIMER, Esq.

"DEAR SIR,—I have used your Syrups and Essences in my 400 public lectures this year, and in my Classes and Schools for Cookery for the past twelve months, and can therefore confidently recommend them for household and general use. The bouquet of each is perfect. They are economical in use, and a perfect treasure alike to chef and housewife.

"I am, Dear Sir, yours truly,

"BARBARA WALLACE GOTHARD,

"LADY SUPERINTENDENT."

Protected by  
Her Majesty's

Royal  
Letters Patent.

# IODISED OIL.

Syn. (Ol. Iodi "Lorimer.")

## FOR OUTWARD APPLICATION ONLY.

*Each fluid ounce of this Oil represents ten grains of pure Iodine. It is highly active, and a perfectly bland, neutral, non-irritant preparation of uniform consistence, and remains free from deposit.*

## ADVANTAGES.

It is readily absorbed.

It obtains the therapeutic effects of Iodine without staining the skin.

The strength may be increased (by the addition of Lin. Iodi) or diminished (by the addition of water).

It does not irritate the skin.

It has been successfully used in several cases where all other preparations of Iodine have failed.

### MODE OF APPLICATION:—

The affected part is to be washed with tepid water (the washing to be repeated before each application), and the Iodised Oil to be briskly rubbed in with the palm of the hand until it disappears.

*In many cases of CHRONIC RHEUMATISM, BRONCHITIS, ENLARGED CERVICAL GLANDS, SPORADIC BRONCHOCELE and SPRAIN, it has proved highly successful.*

Supplied in lb. bottles unstamped, for dispensing, at 6s. each; 2s. 9d. size stamped, at 24s. doz.; 4s. 6d. size stamped, at 42s. doz.

# **LORIMER'S** (REGISTERED) **PEPSINE SAUCE.**

**THE MOST DELICIOUS SAUCE OBTAINABLE.**

**Warranted made from Carefully Selected and Wholesome Ingredients.**

**FOR USE WITH CHOPS, STEAKS, FISH, CUTLETS, AND GRAVIES.**

**In Bottles, 6d. & 1s. each; 4/6 & 8/6 dozen.**

In addition to the usual ingredients of a first-class Sauce, this one contains pure Pepsine, Nature's remedy for indigestion; hence it is invaluable to all sufferers from that most distressing complaint, by whom it should be taken freely with every meal.

The delicacy of flavour, and the richness and refined zest combined in this justly celebrated Sauce, universally recommend it to the palate of the most fastidious epicure; while its judicious combination of selected aromatics proves a most grateful stimulus to the important functions of the stomach, its affluent piquancy lends a peculiar and exquisite enjoyment to the pleasures of the table. All persons wishing to enjoy good digestion should partake of it freely with their meals.

## **IMPORTANT TEST.**

TAKE A HARD-BOILED EGG, separate the white from the yolk, break up the white as if masticated, add it to two tablespoonfuls of LORIMER'S PEPSINE SAUCE diluted with an equal quantity of water, mix well, and allow the mixture to stand at a temperature of 130 degrees Fah. for a few hours, when it will be found that most, if not all, of the egg has disappeared—has actually been digested as in the living stomach; a similar result will occur if shreds of beef finely minced are used instead of white of egg. A sauce which does not answer this test is useless, and the only one in the world which will is

## **LORIMER'S PEPSINE SAUCE.**

The following, out of many that might be quoted, are opinions that have been given of it:—

**From "CHEMIST AND DRUGGIST," November 15th, 1873.**

"MR. LORIMER has conceived the happy thought of introducing a 'Pepsine Sauce'; the idea seems to be excellent. There is no doubt that the Pepsine does possess great virtue, and we have satisfied ourselves that LORIMER'S SAUCE contains a fair proportion of this product. Nothing could be easier or more natural than to take Pepsine in this form, and we may add that the Sauce is of an agreeable and piquant flavour."

Dr. SCHACHT, President of the "Apotheker Verein," in a paper read before that scientific body at Berlin, in 1873, referred to Lorimer's Sauce in terms of the highest praise, and recommended it in preference to any other form of Pepsine, wines, essences, &c.

**MANUFACTURED ONLY BY**

 **JULY 1892.**

---

DEPOTS

**LONDON**

4 — Cullum Street E. C.

**NEW-YORK**

281 — Pearl Street — 281

**PARIS :** 39, Rue Etienne Marcel, 39.

**CASSIE** (*Acacia Farnesiana*). The predictions of our 1891 report have been fully realised and the abundance of flowers, as well as the large stocks of last year's pomade still on hand, have contributed to keep prices relatively low. This has enabled us to manufacture a highly concentrated **Cassie Pomade** at a reasonable price.

We have also remarked, for several years past, an appreciable diminution in the use of this product; for, on account of the preference of the public for colourless extracts, perfumers have largely abandoned the employment of Cassie in the preparation of their articles.

**TUBEROSE**. — The satisfactory crop of this flower has enabled us to considerably increase our production of **Tuberose Pomade** of which the use is constantly augmenting.

The country round Grasse is very suitable to the cultivation of Tuberose, which is now grown in a large scale, particularly since the construction of the new canal, has rendered irrigation everywhere possible. We expect therefore, shortly to have to report a large production of this flower, so useful to perfumers.

**JONQUIL**. — Our market has been flooded with Jonquil flowers, the more so on account of the limited use, during late years, of **Jonquil Pomade**. We have profited by this fact to manufacture a pomade at the highest possible degree of concentration, which will give most satisfactory results to such perfumers as favour us with their orders.

**RESEDA** (*Mignonette*). — The use of **Reseda Pomade** is on the increase, as perfumers and the public alike commence to appreciate the sweetness of this perfume.

The crop this year will not be abundant, but we hope to manufacture a sufficient quantity to meet the requirements of our friends.

---

## ESSENTIAL OILS

As we have already stated at the commencement of this annual summary, we feel the consequences of the general uneasiness and of the stagnation of trade.

In consequence of the increasing difficulty in disposing of the products of our industry, prices in general remain very low, although the crops of flowers and aromatic plants cannot be considered of extraordinary abundance. Beyond this, the over production of certain exotic plants, such as Geranium, Patchouly, Sandalwood, Cloves, etc., has so reduced the prices of the essential oils therefrom produced, that neither the growers nor the distillers can obtain any margin of profit.

Under these circumstances, we are convinced that a serious re-action cannot fail to set in and that a large increase in prices will shortly take place. It is impossible to suppose that, with this serious fall in prices, growers, will continue to extend their plantations. On the contrary, it is certain that they will be abandoned or replaced by more remunerative crops.

---

Sole Agents—

Frederick BOEHM, 4, Cullum Street, LONDON E.C.  
LIEBMAN & BUTLER, 281, Pearl Street, NEW-YORK, U.S.A.

**NEROLY.** — The present low prices should encourage buyers to lay in large stocks, for it is more than probable that next year we shall have to report a considerable advance in the prices of this article.

**PETIT GRAIN OIL.** — The rise and fall of prices for this article, always corresponds with those of Neroly. We have this year in consequence Petit Grain Oil at low prices and we advise buyers to profit thereby.

**LAVENDER OIL.** — The last crop has furnished a very superior Lavender oil at comparatively low prices. The next crop (August-September) promises badly, as the unusual drought, which we have experienced during the last three months, is very prejudicial to the Lavender plantations. We believe, in consequence, that prices will shortly go up, and for this reason advise our friends to make extensive purchases before this advance take place.

**ASPIC OIL.** — A good crop, but prices rule very high, on account of the numerous uses to which this Oil has been applied in different manufactures. The stocks here are almost exhausted, and we expect a marked rise in prices next season, for the same reason as in the case of Lavender, above alluded to.

**THYME OIL.** — We are busy distilling this plant, which produces an excellent article, although the yield is below the average, on account of the drought. We think, however, that prices will not be greatly altered, and that this oil will be obtainable on the same terms as in previous years.

**GERANIUM OIL.** — During the last twelvemonths, great fluctuations have taken place in the price of this oil, and the large quantities produced in the Isle of Bourbon have reduced prices to a level hitherto unprecedented. It is, however, beyond all doubt that these low prices will not be of long duration, as the growers of Reunion have commenced to give up this culture and to replace the same by more remunerative crops.

In addition to this, the Isle of Bourbon, at the beginning of this year, was visited by two or three cyclones which did great damage to the Geranium plantations.

On account of the competition of Reunion, the African growers have also largely neglected their plantations, so that an advance of prices in this direction, also, is more than probable.

The **Geranium Oil** distilled at Grasse is always sought after by connoisseurs, and our **Geranium Oil rectified on Rose Flowers** is specially appreciated by the perfumers and soapmakers to whom the high quality of articles is more important than a low price.

We particularly recommend to our friends **this speciality of our firm**, the excellent quality of which is universally acknowledged.

**PEPPERMINT OIL.** -- The extension of the peppermint plantations in the neighbourhood of our town still continues, and prices consequently remain low. Our Peppermint Oil meets with increasing favor, as first class perfumers and distillers of fine liqueurs alike, prefer Grasse Peppermint Oil to all other kinds elsewhere produced. We guarantee the **absolute purity** of our Rectified Peppermint Oil, which bears our seal, and of which the mark is well known and of high standing.

# Extension of the Premises

OF

# EVANS, LESCHER & WEBB,

## LONDON.

Portraits of the Members.

*Yrs sincerely*  
J. S. Lescher.

*Yours faithfully*  
E. W. Evans

W. H. R. D. 1892. Evans, Lester & Webb's Enlarged Premises shewing extension on the right by the addition of No 57 Bartholomew Close.

## History of the firm.

THE present firm of EVANS LESCHER & WEBB was founded about 1820 by Mr. JOHN EVANS, who had previously been a partner with KEMPSON, YATES & Co.; he was joined by DANIEL STABLE, trading as STABLE & EVANS, and on the former's retirement, as JOHN EVANS & Co. In 1828, Mr. J. SIDNEY LESCHER joined Mr. EVANS (the partners becoming subsequently connected by marriage), at 62, Wood Street, Cheapside; the firm then became EVANS & LESCHER, and they removed in a few years to 4, Cripplegate Buildings.

In 1845 they established themselves at 60, Bartholomew Close, incorporating Nos. 58 and 59, part of which had been the residence of Mr. EVANS, and the firm became EVANS, LESCHER & EVANS, Mr. J. HILDITCH EVANS, a son of the senior, having come up from the Liverpool firm to share in the management.

Mr. JOHN EVANS died at Leamington in 1865. He had been well known for many years as a regular attendant on 'Change, and at the Drug Sales at Garraway's Coffee House, and he enjoyed a reputation of the highest integrity in the wholesale drug trade.

Mr. J. HILDITCH EVANS retired in 1870. Mr. H. SUGDEN EVANS, his brother, then took his place; he was a juror at the 1873 Vienna Exhibition, and held other important positions both here and in Canada.

Mr. LESCHER retired from work in 1872, but still remains the senior partner in London. He was one of the founders of the Pharmaceutical Society, and on the Council in its early days with Jacob Bell, Squire, Morson, and other pioneers, who worked so actively for the general good of the trade. Mr. LESCHER is now in his eighty-ninth year, and his unimpaired mind and warm sympathies are with us still.

Mr. EDWARD EVANS, the head of Evans, Sons & Co., of Liverpool, is a partner in the London house; he is a magistrate for the County of Denbighshire, where he has a seat, and he has secured the respect and esteem of all who know him.

Mr. F. HARWOOD LESCHER, F.C.S., eldest son of Mr. J. S. LESCHER, joined the firm in 1868. He was Pereira Medallist in 1868, and is the author of "Elements of Pharmacy" and "Recent Materia Medica."

[Continued on page 4.]

*Faithfully yours  
J. Harwood Lescher*

*Yours faithfully  
F. Harwood Lescher*

HISTORY OF THE FIRM—Continued.

In 1872 Mr. E. ALFRED WEBB, a grandson of the founder, was admitted a partner, and in 1879 the firm assumed its present style of EVANS, LESCHER & WEBB. Mr. WEBB has taken several of the medals of the Pharmaceutical Society and is a Fellow of the Linnean Society.

At the present time, Mr. F. H. LESCHER and Mr. WEBB, both Pharmaceutical Chemists by examination, manage the London business.

Mr. H. SUGDEN EVANS, in 1880, took the management of the Montreal House, which from Evans, Mercer & Co., became H. Sugden Evans & Co. After his death, this firm assumed the style of Evans and Sons, Limited.

In 1833, Mr. JOHN EVANS and Mr. J. S. LESCHER established a house in Liverpool, from which the latter retired two years later. The late Mr. T. BICKERTON EVANS, the eldest son of the senior, took his place, and the style of the firm became Evans, Sons & Co., which has remained unaltered for nearly sixty years. Mr. EDWARD EVANS is now the senior partner, and it is being managed by the third generation.

Mr. EDWARD EVANS and Mr. J. S. LESCHER have been elected Honorary Members of the recently formed Drug Club.

FURTHER EXTENSION OF PREMISES.

The old buildings, 58-60 Bartholomew Close, erected in 1767, were pulled down in 1879, and a very artistic building was erected for the firm by Mr. Aston Webb, the now eminent architect.

But this being inadequate for the great increase in the business of the firm in 1892, the premises have now been enlarged by the acquisition of No. 57, Bartholomew Close, which has been entirely rebuilt.

Great additional accommodation has been hereby secured, including a very large Export packing floor, a new and lofty set of rooms for "Counter Adjuncts," increased cellarage, considerable augmentation of the Counting House, and more space in every department.

Simultaneously with this increased accommodation, additional facilities are offered for the shipment of every spirituous preparation in Bond, besides Tinctures (see August price list), at greatly reduced rates.

Whether more buildings in the old Close of the Priory (founded by Rahere simultaneously with the hospital of St. Bartholomew, in 1123) will be devoted to drugs in days to come, the future alone will show.

"Pioneers in the Pill Trade."

CHEMISTS AND MANUFACTURERS OF

Soluble-Coated Pills, Bromo-Soda, Bromo-Potash, Ingluvin,  
Parvules, Compressed Lentiforms, &c., &c.

FOURTEEN "WORLD'S FAIR" MEDALS AWARDED.

(British Dépôt—F. NEWBERY & SONS, London. Estab. 1746).

WARNER HALL, the New Building of Messrs. W. R. Warner & Co.

## Specialties for Druggists and Shippers :

Counter Vases of Pills and Granules, with Elegant Hand-painted Labels. Vases containing 1,000 SALEABLE and SOLUBLE Coated Pills, from 5/6 each upwards, according to formula. Quinine Pills from 6/6 per single thousand. Little Rhubarb Granules, a new and effective Aperient, or "Little Dinner Pill," per single thousand, 4/-, subject to special reduction for large quantities.

See following pages for fuller details.

# SUGAR-COATED PILLS

GRANULES, AND PARVULES,

PREPARED BY

W. R. WARNER & CO.

## What others have said of them:

"They are of excellent quality."—*Lancet*.

"Are extremely well made."—*British Medical Journal*.

"These Granules (Calcii Sulph.) are very well made."—*Medical Times and Gazette*.

"In point of Solubility, they are certainly a great improvement on certain forms of Coated Pills largely used in this Country."—*Ibid*.

"Very beautifully turned out. Phosphorus Pills are especially worthy of notice on account of the perfect manner in which the Phosphorus is protected from oxidation."—*Chemist and Druggist*.

"To some of these Pills we have given a fair trial, and we have found them to answer every purpose for which they are intended."—*Medical Press and Circular*.

Photographic Wood Cut of an assorted "Stand" of Counter Vases of Pharmacopœial Pills or Granules (W. R. Warner & Co.). "Globe Stoppered" or Square Shouldered. These Vases are fitted with hand-painted, gold-bordered Labels. Height of smaller Vase to top of Stopper, about 11 inches. Design Registered.

## COUNTER (GLOBE-STOPPERED) VASES OF 1,000 OR MORE PILLS.

The numbers refer to Warner's List (free on application to any part of the World), in which the formulae will be found.

The purchaser should when ordering, state explicitly the FORMULÆ and VASE-LABELS required, as for example "Three Vases, No. 120," labelled "Aperient," "Liver," and "Compound Podophyllin" Pills.

See Warner's Catalogue for prices and descriptions of the various sizes and patterns of Vases.

SPECIAL FIGURES FOR PILLS IN BULK BOTTLES OF 5,000, ETC.

# Druggists

doing a "Little Pill" Trade (*i.e.*, a Trade in Little Pills), and desirous to increase their returns, may profitably add to stock the following lines of effective, and generally appreciated Sugar-coated "Little Liver, etc., Pills," viz.

List No. 142.—"LITTLE CATHARTIC GRANULES."

per 1,000, 4/-. Aloin, 1-10 gr. Podophyllin, 1-5 gr. Ext Hyoscy, 1-20 gr.  
Jalapin, 1-10 gr. Ext. Nuc. Vom., 1-20 gr. Ol. Res Capsici, 1-20 gr. Dose 1 to 4.

List No. 180.—LITTLE CATH. GRANULES with EUONYMIN.

" 184.—"LITTLE RHUBARB GRANULES."

Ext. Rbei, Aloin aa  $\frac{1}{4}$  gr. Ext. Hyos. 1-10 gr.

The word "Little" properly indicates the small bulk of these really elegant "Pilletes," which are popular, profitable, and therefore (in steadiness of demand) permanent.

Per "Globe-stoppered"  
Vase of 1,000 ... 5/6  
Ditto of 3,000 ... 13/-  
Ditto of 5,000 ... 21/-

No. 142, No. 180, or  
No. 184.

Per "Pedestal" Cut-  
stem, &c. Vase of  
1,000 ... 7/-  
Ditto of 3,000 ... 14/6  
(A Supply of Labels, free)

No. 142, No. 180, or  
No. 184.

SUPERIORITY AND RELIABILITY OF SUGAR-COATED

## QUININE PILLS,

Prepared by **W. R. WARNER & CO.**

QUININE PILLS of our make are prepared from Sulphate of Quinia noted for its purity and excellence. Each Pill contains the full complement of material as expressed on the label, without the necessity of adding any excess to compensate for impurities. They are perfectly soluble, and physicians can depend upon obtaining the full benefit of this valuable remedy in a pleasant form. Always specify "W. R. WARNER & CO.," and avoid the substitution of cheaper and inferior brands.

**SUGAR-COATED QUININE PILLS.**

"I take the pleasure in testifying that W. R. Warner & Co.'s Quinine Pills are practically just what they claim to be, whether judged by analytical tests or by the therapeutic effect obtained from their use."  
*Detroit, Mich.* A. B. LYONS, M.D., Analytical Chemist.

Special Rates for Bottles of 1,000 Pills.

"PENNY QUININE."—By purchasing the Quinine Pills of W. R. Warner & Co.'s manufacture, Penny doses of Quinine in card boxes, may be sold so as to leave a handsome margin. The use of Pill Tubes is suggested for a 4d. or 6d. article, the number and dosage of the Pills being varied according to circumstances.

# Pre=eminent

## and WHY?

In the case of **Armour & Company's Digestive Ferments** evolution has performed its perfect work. The manufacture of Pepsin and Pancreatin logically belongs to, and must inevitably remain in the hands of, a firm which slaughters annually 1,750,000 hogs, 750,000 cattle, and has the enterprise and capital necessary to equip a perfectly appointed laboratory, and engage the best chemical talent to manipulate the choicest portion of such stupendous stores of raw material.

---

THE CHEMIST AND DRUGGIST, November 28th, 1891:—

“Messrs. ARMOUR & Co. have peculiar advantages . . . they can work up the raw material whilst the peptic juices are in the natural condition.”

THE LANCET, November 14th, 1891:—

“The digestive ferments of Messrs. ARMOUR & Co.'s manufacture are to be assigned a place high up in the category of valuable alimentary products. EVERY ONE OF THEM FURNISHED EXCELLENT RESULTS.”

Acknowledged by the Press as

“RESULTS WORTHY OF ‘FIN DE SIÈCLE’ PHARMACY.”

### TESTIMONIALS.

DEAR SIR,

I have much pleasure in expressing my complete satisfaction with the **Reagents** supplied by you. We now use them in preference to any others in the College Laboratory.

Messrs. HARRINGTON BROS., Cork.

(Signed),

F. H. NEVILLE, Lecturer in Natural Science,  
Sidney College, Cambridge.

SIDNEY COLLEGE, CAMBRIDGE.  
November 26th, 1890.

ROYAL UNIVERSITY OF IRELAND, DUBLIN,  
August 29th, 1890.

It gives me much pleasure to state that I use **EXCLUSIVELY** for the *Examinations*, and other purposes of the *University*, the **Chemicals**, manufactured by Messrs. HARRINGTON BROS., Shandon Chemical Works, Cork, and have found them exceptionally satisfactory.

(Signed),

W. E. ADENEY, F.I.C., F.C.S.,  
Curator and Examiner in Chemistry in the  
Royal University in Ireland.

QUEEN'S COLLEGE, CORK,  
October, 1890.

It gives me great pleasure to bear testimony to the excellence of the **Chemicals** manufactured by the Messrs. HARRINGTON. For many years I have been supplied by them with **Chemicals**, and everything I got from them *invariably* gave me *perfect satisfaction*.

(Signed),

MAXWELL SIMPSON, LL.D., D.SC., M.D., F.R.S., F.R.U.I.,  
Professor of Chemistry, Queen's College, Cork.

CITY ANALYST'S OFFICE, CORK,  
October 29th, 1890.

GENTLEMEN,

I have now used almost exclusively for the past five years your **Chemicals**, and after that long experience it is but justice for me to say that I invariably found your goods to be of the *very best quality*; and it is a satisfaction to feel, more particularly when one gets pressed for time, that *thorough reliance* can be placed on everything which the SHANDON CHEMICAL WORKS undertake to send forth.

I am, Gentlemen,

Yours faithfully,

(Signed),

D. J. O'MAHONY, F.C.S.,  
City Analyst, Cork.

## PRICE LIST OF PEPSINS $\frac{c}{c}$ PEPTONES $\frac{c}{c}$ PANCREATINS $\frac{c}{c}$

### LATEST AWARDS.

CALCUTTA, 1883.—1st Class Certificate and Gold Medal.

LIVERPOOL, 1886.—H.C., Member of Jury.

SYDNEY, 1883.—Gold Medal.

LOUISVILLE, 1888.—Diploma of Honour.

MELBOURNE, 1888-89.—1st Class Certificate.

PARIS UNIVERSAL EXHIBITION, 1889.—Gold Medal.

We would draw the attention of Chemists and Druggists to the fact that a good Pepsin must not only dissolve, but digest—i.e., Peptonise. Our Pepsins answer entirely to the requirements of the French Pharmacopœia, which requires from

Pepsin the complete PEPTONISATION of the albuminous substance (fibrine).

### OUR PRODUCTS $\frac{c}{c}$ ARE QUOTED AS FOLLOWS:—

|                                                                |             |                     |
|----------------------------------------------------------------|-------------|---------------------|
| Extract—Pepsin $\frac{c}{c}$ ( <i>French Pharmacopœia</i> )    | standard 50 | 26/6 per lb. net.   |

## COCKING'S JAPAN OIL OF PEPPERMINT.

Our Extra Steam Refined Oil is treble distilled and twice rectified by steam, by an entirely new process and in apparatus of our own invention, by which all those polymeric products of a tarry and resinous nature which are objected to by some consumers are extracted. It is of water-white colour retaining its full aroma, pungency, and strength, and guaranteed absolutely pure and soluble in spirits of wine.

## COCKING'S JAPAN MENTHOL CRYSTALS.

Our Extra Steam Refined quality is in firm, hard, dry, and snowy-white crystals, entirely free from oily contamination, and therefore of the highest melting-point. As the original and largest manufacturers in the world of the true Japan Menthol, we guarantee our brand to be absolutely pure. Beware of substitutes. For full particulars, therapeutic uses, &c., see special circulars, to be had on application.

**Sole Agents—JOHN BATT & CO., 39 OLD BROAD ST., E.C.**

## Heinrich Haensel's TERPENELESS CONCENTRATED Non-Clouding OIL OF LEMON

*Oleum Limonis sine terpeno* (Heinrich Haensel).

Spec. gravity 0.9003 (vide Professor Dr. Geiseler's report in 1881). Boiling point between  $225^{\circ}$  and  $235^{\circ}$  C. Absolutely soluble in diluted spirit. Purest and most powerful Aroma and Taste. Pre-eminently suitable for making Soluble Essence of Lemon, for which **EVEN PROOF SPIRIT** may be used.  $\frac{1}{4}$  drachm of Heinrich Haensel's Terpeneless Concentrated Non-Clouding Oil of Lemon (dissolved in same quantity  $\frac{1}{4}$  drachm, alcohol 60 o.p.) is more than sufficient to 1 gallon of Syrup of extra-superfine quality for making Lemonade of a remarkably pure and sweet Lemon bouquet.

**CAUTION.**—Beware of useless imitations which are being offered under similar names but are not completely free from terpene, and therefore of much less solubility and less value.

FOR FURTHER PARTICULARS APPLY TO

**WILLIAM POPPELREUTER, 54 PORTLAND STREET, MANCHESTER.**

# COMPRESSED DRUGS

## WAND (Pearl-Coated Pill Factory), LEICESTER.

## FREEMAN'S CHLORODYNE. THE ORIGINAL AND ONLY TRUE.

Discovered and Invented by Richard Freeman in 1844. In its composition and effect it bears no resemblance to any of the many formulas published, but has curative and chemical properties peculiarly its own, nor is there any analytical test for it. It has been found by the profession and large numbers of the public to succeed after all imitations had failed, and maintains its unaltered position as the only reliable CHLORODYNE. It is extensively used by Medical Men in their official and private practice, at home and abroad, who have given numerous written testimonials of its wonderful efficacy.

**IMPORTANT CAUTION.**—Four Chancery Suits terminated in favour of FREEMAN'S ORIGINAL CHLORODYNE and against Collis Browne and Davenport. Lord Chancellor Selborne, Lord Justice James, and Lord Justice Mellish condemned their proceedings, and decreed them to pay all costs. Reports of the suits in "Times," January 12 and July 13, 1884, and April 29 and July 24, 1873; and "British Medical Journal," May 3, 1873. Sold by Chemists Everywhere

**Sole Manufacturer: R. FREEMAN, Pharmacist, 70 Kennington Park Road, LONDON, S.E.**

## Chemists will find HENSON'S FLUIDE-COCA AND CUCA-CHOCOLATE

For Cyclists, Travellers, Invalids, &c., very taking accessories; they interfere with no other lives. FLUIDE-COCA is miscible with wine or water, and enables patients to make a better Coca Wine than is usually sold, and Chemists to supply without a licence.

The *British Medical Journal's* Report of Analysis of Henson's Fluide-Coca and Cucca-Chocolate, April 9th, 1892, says:—"It is a highly concentrated preparation, convenient for making Coca Wine." "It is very palatable, and can be relied upon to possess the full medicinal properties of the drug."

The *Editor Chemist and Druggist* writes:—"Just the very thing people want for travelling, to ward off the headache which invariably accompanies hunger, as well as to prevent inordinate muscular waste—a thing which Coca undoubtedly does."

To be obtained from Messrs. S. Maw, Son & Thompson, Edwards & Sons, J. Sanger & Sons, Barclay & Co. (Lim.), & Co.

Fluide-Coca, in oval flasks, 2s., 3s. 6d., and 10s. 6d. Cucca-Chocolate in boxes, 1s., 2s. 6d., and 10s. 6d.

Imported and Standardised by **HENSON & CO., BEULAH HILL, S.E.**

# THE NEW LAXATIVE.

# MALTO-RICINOL

(KINGSFORD).

Possessing the well-known aperient properties of the finest Italian Castor Oil, combined with the Tonic and Digestive characteristics of Pure Malt Extract, in an exceedingly palatable form. Children and delicate females take it readily, and easily digest it. Its action is mild but reliable. The taste of the oil is quite indiscernible.

**CONTAINS 50 PER CENT. OF CASTOR OIL.**

**DOSE**—*Children: Half to Two Teaspoonfuls. Adults: One to Two Tablespoonfuls.*  
In Bottles, 1s. and 2s. 6d. 8s. and 18s. per doz.

**KINGSFORD & CO.,** Pharmaceutical Chemists, **54 PICCADILLY, W.**  
**Schacht's Preparations.**

## SCHACHT'S LIQUOR BISMUTHI.

Absolutely pure. The original preparation, invented and introduced to medicine by Mr. Schacht in 1855. Its distinct superiority is universally admitted. In  $\frac{1}{2}$  lb., 1 lb., 2 lb., and 5 lb. bottles. Dose: 1 drachm diluted. When ordering, please to specify "SCHACHT'S."

## SCHACHT'S LIQ. BISMUTHI SEDATIVUS.

Contains pure Bismuth and *Pepsina Liquida* in combination with sedatives. A formula most serviceable in the treatment of gastric pain. In 4 oz.,  $\frac{1}{2}$  lb., and 1 lb. bottles.

## SCHACHT'S SYR. CINCHONÆ ALCOHOLICUS.

A standard preparation, of definite alkaloidal strength, containing the entire medicinal properties of the finest Cinchona Bark. It is, in fact, *Bark minus the woody fibre*, and its efficiency has been proved by careful medical enquiry. Dose: Ten to sixty drops.

## SCHACHT'S PEPSINA LIQUIDA (REGISTERED TITLE).

Fluid pepsine of extraordinary activity—tasteless, odourless, attractive to patients, and reasonable in price. Every teaspoonful when tested by the official B.P. process is guaranteed to effect the solution of 1,000 grains of albumen. Peptic power is the only test of value. Most of the foetid and repulsive dry Pepsines have proved worthless. In 4 oz. bottles, 2s. 6d. each; and larger sizes for dispensing at a cheaper rate.

## SCHACHT'S PEPSINA LIQUIDA C. BISMUTHO.

Each drachm contains in a concentrated form, besides the fluid pepsine a full dose of Schacht's Liquor Bismuthi. Dose: One drachm. In  $\frac{1}{2}$  lb. and 1 lb. bottles.

*N.B.*—*Peps. Liq. c. Bismutho Co.* contains, in addition, one gr. soluble Euonymin in each drachm.

## SCHACHT'S PEPSINA LIQUIDA C. EUONYMIN.

Each drachm contains one grain of soluble Euonymin. Dose: One drachm. For dispensing  $\frac{1}{2}$  lb. and 1 lb. bottles.

## SCHACHT'S LIQ. PODOPHYLLI C. BISMUTHO.

A perfect solution of Podophyllin, containing  $\frac{1}{2}$  gr. in each drachm.

## SCHACHT'S LIQUOR CASCARÆ DULCIS.

A pleasant and active form of Cascara Sagrada. Dose: One to three teaspoonfuls diluted. In 4 oz.,  $\frac{1}{2}$  lb. and 1 lb. bottles.

## SCHACHT'S INFALLIBLE RENNET.

An entirely new Essence, perfectly reliable, for the coagulation of Milk, and the production of Junkets and Curds and Whey. It is a preparation of the most wholesome nature, that contains no salt, and has no special taste, smell, or colour. In large bottles at 1s. of any Chemists. This Essence keeps well in any climate.

*The above Preparations can be procured from Messrs. Barclay & Sons, W. Edwards & Son, and the Wholesale Druggists, or direct by post from*

**GILES, SCHACHT & Co., Clifton, Bristol.**

# PURE CHLOROFORM

A definite Chemical Compound, answering B.P. and all Official Tests.  
Has obtained the confidence of the most eminent Surgeons, has been used successfully in the Edinburgh Royal Infirmary, in the Edinburgh Royal Maternity and Simpson Memorial Hospital, and in the most important Institutions both at home and abroad.

## Macfarlan's CHLOROFORM Macfarlan's SPECIALLY PURIFIED.

This preparation is purer than any which has hitherto been placed on the Market.

# Dr. J. COLLIS BROWNE'S CHLORODYNE.

THE ORIGINAL AND ONLY GENUINE.

## IMPORTANT CAUTIONS.

From Lord Chancellor SELBORNE, Vice-Chancellor Sir W. PAGE WOOD and the LORDS JUSTICES OF APPEAL.

VICE-CHANCELLOR SIR W. PAGE WOOD, by whom the suit in Chancery was first heard, stated in his judgment that "Dr. J. Collis Browne was undoubtedly the Inventor of Chlorodyne, that the whole story of the Defendant Freeman was as deliberately untrue as the falsehood he had deposed to with reference to the use of his Chlorodyne in the Hospital."

The VICE-CHANCELLOR also stated, "that Chlorodyne was a fanciful name, and had application been made sooner, the Court would have given Dr. Browne protection."

LORD CHANCELLOR SELBORNE coincided with the judgment of the Vice-Chancellor upon this point, and stated, "that had application been made at a proper time and place, the Court would have found means to restrain the Defendant from misrepresenting the decision of the Vice-Chancellor."

LORD JUSTICE JAMES, on appeal, stated in his judgment, "that the Defendant Freeman had made a deliberate misrepresentation of the decision of Vice-Chancellor Wood."

It was proved in Court, on affidavit by Mrs. Forbes, of Paris, that the testimonial published in the *Times*, November 14th, 1865, speaking of the great efficacy of Chlorodyne in Cholera, referred to Dr. J. Collis Browne's Chlorodyne, and that she never used any other, that she had written to the Defendant Freeman to that effect; notwithstanding which notice the Defendant publishes the said testimonial as referring to his medicine.

The Editor of the *Medical Times*, in his report on Chlorodyne, January 13th, 1866, gives information that the Chlorodyne referred to was the medicine introduced by a retired Army Medical Officer, which was Dr. J. Collis Browne; still this is published by the Defendant as testimony to his medicine.

Numerous affidavits from eminent Physicians and others were produced in Court, stating that Dr. J. Collis Browne was the inventor of Chlorodyne, and that when prescribing they mean no other.

The Defendant himself publishes that his compound is in effect and composition quite different to any other preparation; nevertheless he assumes the name, testimonials, &c., of Chlorodyne.

Technicalities in law prevent that protection which the public should justly have against such a course of conduct. It is now incumbent on all who purchase Chlorodyne to see that the name, Dr. J. Collis Browne's Chlorodyne, is engraved on the Government Stamp, as it is not sold otherwise. All other compounds under the name of Chlorodyne are spurious. All attempts at analysis have failed; hence the statement that the constituents of Chlorodyne are known is a misrepresentation.

ORIGINAL AND

ONLY GENUINE

## FURTHER IMPORTANT NOTICE.

The subjoined list of eminent Firms concur with Vice-Chancellor Sir W. Page Wood's statement in Court, that Dr. Collis Browne was undoubtedly the Inventor of Chlorodyne; and that when Chlorodyne, or the Original Chlorodyne, is ordered, they invariably supply Dr. J. Collis Browne's:—

|                             |            |                            |               |                             |            |

After these public statements in a Court of Equity, and subsequent confirmation by the Trade at large, no Chemist can conscientiously use or sell any other compound for Chlorodyne without committing a breach of faith, unjust to patient and physician. The value of the remedy alone creates the great demand.

Sold in Bottles—1s. 1½d., 2s. 9d., 4s. 6d., and 11s. Usual Discount to the Profession.

# PAPAIN

(DR. FINKLER & CO.)

A purely vegetable ferment from the juice of the Carica Papaya. It is obtained by a special process, and is not merely the dried juice. It is superior to best Pepsine and Pancreatine, as it combines the digestive action of both.

Numerous reports by the leading English and Foreign Medical Authorities, Hospitals, and Institutions testify to its

### Absolute Therapeutic Efficacy, Purity, and Uniformity.

**The Lancet.**—"A trustworthy product, reliable for uniformity of digestive power."

**Medical Press and Circular.**—"As a remedy in Indigestion it has unquestionable advantage over similar bodies of animal origin."

**Edinburgh Med. Journal.**—"It is a vegetable ferment of great power; is sure to become a valuable medicine."

**Medical Annual.**—"It has the advantage over Pepsin and Pancreatine as it continues its digestive action throughout the whole alimentary canal."

**Prov. Med. Journal.**—"A most reliable preparation; it is superior to many Pepsin preparations."

**Indian Medical Record.**—"In the form of tablets, pills, lozenges, powder, &c., it offers to the physician a most elegant, simple, and efficient preparation of Papaya, in which the active principles are represented in the best pharmaceutical type of concentration."

### CAUTION TO BUYERS.

# CACHETS

AND CLOSING APPARATUS (MORSTADT).

The Apparatus will close one dozen Cachets at once, of six different sizes, in an extremely simple, quick, and neat manner, without any adjustment of the apparatus to suit the different sizes. It prevents the powder from getting between the edges of the Cachets, and ensures their being firmly and accurately closed by simply passing the damping roller over all the lids of the Cachets, closing the apparatus, and pushing out the twelve closed Cachets.

| Net Prices of Apparatus Complete, including Case:— |                            |                             |     | NICKEL. | ZINC. | No. | CACHETS                          | Per 100 <sup>0</sup> |

Complete, with Damping Roller, Funnels, Thimbles, &c.

Embossing Cachets with name, 6d. per 1,000 extra. Die for same, 2/6.

## PALMA CHRISTI

(Dr. STANDKE).

Is a high-class quality Castor Oil treated in a special manner so that it is entirely changed both in appearance and taste. It is more like a syrup than an oil, and is readily taken by children and other persons to whom the ordinary oil is so repugnant. Palma Christi is not Tasteless but eminently Tasty. It possesses the full cathartic properties of ordinary Castor Oil. Its objectionable taste is entirely removed by the method of treatment, and the addition of innocuous aromatic ingredients is so minute that the purity of the oil is in no way affected. Experts here, who had the oil presented to them, entirely failed to recognise it as Castor Oil.

*The British Medical Journal*, May 21st, 1892, says:—"There can be no doubt that the manufacturers of the castor oil have succeeded in not only extracting from the oil its disagreeable flavour, but also in obtaining a product which, judging from its taste, it would be impossible to say is castor oil. It is a transparent, colourless liquid, very much like glycerine in appearance, with an agreeable odour of cinnamon and pleasant aromatic taste."

*The Medical Press and Circular*, May 25th, 1892, says:—"This preparation of castor oil is the result of a special process which entirely obviates the objectionable qualities of the crude oil without impairing in the slightest degree its cathartic properties. So much is this the case, that were it not for the label one would have some difficulty in identifying the nature of the sample. In appearance it is bright and clear, and in fact it is undistinguishable by the eye from ordinary castor oil. It will, in future, be inexcusable to subject patients to the nausea inseparable from the ingestion of the crude oil, the only drawback to the use of which has now been overcome."

In 1-lb. Bottles, 2s. 4d. per lb.; in Winchesters, 2s. 2d. lb.

With every bulk order a supply of nicely lithographed labels, without name, are sent to enable Chemists to effectively and inexpensively re-bottle for Retail sale.

## CUSHMAN'S PATENT MENTHOL INHALER

This is the most effective Pocket Inhaler in existence, and is recommended by Mr. Lennox Browne, F.R.C.S. Edin., for Colds, Coughs, Sore Throats, and all Bronchial affections.

It is neat and compact; most durable and cleanly, not liable to get out of order, and does not require renewing; no liquid to drop or spill, and can be carried on the person convenient for use at any time. Its medicinal virtues remain as long as the menthol is retained in the Inhaler. Used very successfully during the past two years as a Specific against the Influenza Epidemic.

Retail at 1s. 6d.; Trade 15s. per dozen.

THOMAS CHRISTY & CO., 25 LIME STREET, LONDON, E.C.

# PAPAIN

(DR. FINKLER & CO.).

A purely Vegetable ferment from the juice of the Carica Papaya. It is obtained by a special process, and is not merely the dried juice. It is superior to best Pepsine and Pancreatine, as it combines the digestive action of both.

## THE "STIPENDUM" STOPPER CO., LIM.

47 LAMB'S CONDUIT STREET, LONDON, W.C.,

Manufacture the following Specialities—

- "STIPENDUM" CORK STOPPERS, in all sizes.
- "STIPENDUM" CORK-LINED CAPS, for Pomade Bottles.
- "STIPENDUM" SCREW CAPS, for Pomade Bottles.
- "STIPENDUM" OPENERS, for Stoppered Aërated Water Bottles.

### "STIPENDUM" GREASE-PROOF COVERED POTS

IN TERRA COTTA, CHOCOLATE, AND BLACK.

The Grease-Proof Covered Pots have perfectly fitting lids, are practically unbreakable, and the only article really answering the purpose intended.

The following Analytical Report should be noted by the trade:—

London, January 5, 1891.

"We have examined the two covered pots marked November 21, 1890, one containing strong nitrate of mercury ointment, and the other iodine ointment, the object being to discover—(1) Whether the ingredients of which the pots are composed have in any way affected the ointments; (2) Whether the pots have been deteriorated by the action of the ointments.

We hereby certify that no trace of any of the ingredients of the pot can be discovered in either of the ointments, and further that the pots themselves were found not to have been acted on at all; and we further consider 'Stipendum' admirably adapted for such pharmaceutical preparations.

### W. CAUDERY & CO., 1 FENCHURCH AVENUE, E.C.

THE

# MOST ABSORBENT DRESSING

EVER INTRODUCED.

This Dressing is unlike any other in the Market, being prepared from a pure Vegetable Fibre, and besides being a very rapid absorbent it will take up  
**FIFTEEN TIMES ITS WEIGHT OF LIQUID.**

## SEDUX

Is supplied impregnated with any Antiseptic Solution required, and guaranteed that every particle is equally impregnated.

## SEDUX

Is admitted by some of the most eminent Medical Men to be the Cleanest, most Absorbent, and most Efficacious Dressing known.

## SEDUX

Can be obtained in almost every form in which Absorbents and Antiseptics are used.

### SEDUX SANITARY SHEETS,

For Accouchement, Bed Sores, &c., are the best and most comfortable. Sold in three Sizes, No. 1, 24 in. by 18 in.; No. 2, 28 in. by 20 in.; No. 3, 34 in. by 34 in.

### SEDUX DIAPERS,

Exquisitely Soft and Cool, are worn with perfect comfort without any of the inconveniences experienced with those generally in use.

### SEDUX FOR DOCTORS' DAILY USE,

Put up into Rolls, 12 in. and 6 in. wide, from which any quantity required is easily detached without opening out the packet, or in small tin boxes.

### THE SEDUX ANTISEPTIC RESPIRATOR (Protected by Letters Patent)

These are the most perfect, simple, and healthy respirators ever introduced, and are the cheapest. They supply a long-felt want, coming in at a price within the reach of everyone, at the same time insuring that perfection and efficiency which no other respirator can claim, nearly all the present respirators being faulty in some way or other; those perforated allowing the cold, fog, and noisome gases to be breathed into the lungs, whereas the *Sedux Respirators*, being made from the pure fibre, either plain or impregnated with corrosive sublimate in a weak solution, or with  $\delta$ l Eucalypti, and covered with Sedux gauze, the air which is inhaled must pass through the layer of Sedux, which, acting like a filter, purifies the thickest London fog, or any other impurities which we are daily breathing. For Asthma or Throat diseases, slightly impregnated with a suitable antiseptic, they prove invaluable. They are sold in three sizes, at prices so that they can be replaced when necessary, thus avoiding the common fault of using a respirator too long, which is most injurious.

### SEDUX CHEST PROTECTORS.

These are supplied either plain or impregnated  $\delta$ l Eucalypti, or any other solution good for Asthmatical or Bronchial diseases. Being very absorbent and porous, they allow of free ventilation, and do not get cold or sticky, consequently they are perfectly healthful and clean. Sold in three sizes.

**THE SEDUX MANUFACTURING CO., 12 Oat Lane, LONDON, E.C.**

# "VINCENT WOOD,

YOU ARE THE RIGHT MAN FOR

## SURGICAL APPLIANCES"

IS THE UNANIMOUS REMARK APPLIED TO MY HOUSE.

This I think correct, as my business the last few years has made gigantic strides. I employ only British labour, who use the most modern and approved machinery.

I will shortly introduce a new Chest and Lung Protector that will astonish the trade.

One of my latest inventions is a genuine

### **GALVANO-ELECTRIC BELT AND SUSPENDER COMBINED,**

and which is having a Large Sale; it is for Assisting Impaired Systems, and for Restoring the Vitality, the absence of which is so prevalent in the present rising generation, either from overwork or illness.

A NEW CORSET, BELT, AND  
BRACE COMBINED.

I also Manufacture every kind of

**GALVANO-ELECTRIC  
CORSETS,  
LADIES' & GENTLEMEN'S  
BELTS,  
LUNG INVIGORATORS,  
MAGNETIC APPLIANCES,  
PORTABLE MEDICAL  
BATTERIES,  
GALVANOMETERS, ETC.**

Also every description of Trusses, Chest and Lung Protectors, Abdominal and Supporting Belts, Suspensory Bandages, Obstetric Binders, Elastic Hosiery, Eyeshades, Chest Expanding Braces, The Patented "Eureka" Ear Cap for Children, &c., &c.

**A SMALL SAMPLE ORDER WILL CONVINCE YOU FOR PRICE AND QUALITY NO OTHER  
MAKER CAN COMPETE WITH ME.**

I SUPPLY, FREE OF CHARGE, TO THOSE STOCKING MY GOODS—

TERRA-COTTA STATUETTES UNDER GLASS CASE, ELECTROS, SHOW-CARDS, CIRCULARS, & SELF-MEASUREMENT FORMS.

The Appliances are well known, as I Advertise them in all parts of the world.

**PLEASE NOTE.**—Owing to my Articles being copied in inferior qualities, I am compelled, for the protection of the Trade, to stamp them V.W. L. "EUREKA." Customers may have their own Patterns Embossed by me with their own Names thereon.

## ROTARY PILL MACHINES

Fig. A.

Fig. A.—This invention consists in a novel and improved arrangement of Machinery, whereby any description of Pill Mass can be converted into Pills, at the rate of from 15 lbs. to 40 lbs. per hour, according to the size of the Machine used.

Fig. A.—No. 1 .. £12 12s.  
No. 2 .. £15 15s.  
No. 3 .. £20 0s.

Fig. B.

Fig. B.—A small useful Machine capable of making 10 lbs. of Pills per hour, particularly adapted for persons making small quantities, at £7 15s.

Press suitable for same, £2 15s.

Any of the above can be made to cut two or three different size Pills at an additional cost for extra Rollers and Plates.

## PIPING PRESSES

Fig. C.

Fig. C. is the Improved Press for Piping, by means of which a great quantity of Mass can be Piped in a few minutes, truer than by the old method of rolling.

No. 1 .. .. £3 0s.  
Fig. C.—No. 2 .. £5 10s.  
No. 3 .. £8 10s.

## J. W. PINDAR'S NEW ROTARY PILL MACHINES

As used to this date by Messrs. Holloway, Cockle, Cox, and all the principal Pill Makers in Europe, Asia, Africa, America, and Australia.

29 Murray St., New York,  
and Farringdon Rd.,  
London, Nov. 9th, 1880.

Mr. J. W. PINDAR,

Dear Sir,—Your letter of inquiry came duly to hand. As I always told you, the Pill Machine in operation at my London warehouse has given entire satisfaction. So have those we are using in this country. We can make smooth, round Pills of uniform size at a very small expense. I can safely say that your Pill Machine is all that you claim it to be—a perfect Machine.

Yours truly,

A. J. WHITE.

224 Strand, 13th March, 1888.  
Mr. J. W. PINDAR,

Sir,—I have much pleasure in stating that the Pill Machine which you made for me answers remarkably well, as the Pills are far better made than those by hand-machines, and with much less waste. I can, therefore, confidently recommend it as a very excellent one, a great saving of labour and, consequently, expense.

I remain, yours faithfully,

THOMAS HOLLOWAY.

3 Crane Court, Fleet Street, Feb. 14th, 1871.

To Mr. J. W. PINDAR.

Dear Sir,—We have now used your Rotary Pill Machine about six years, and find it answers better than any we had previously used, and makes the Pills of a very regular size.—Yours truly,

T. WHELPTON.

338 Oxford St., opposite Great Portland St.,  
Feb. 11th, 1871.

Mr. J. W. PINDAR,

Sir,—The Rotary Pill Machine and Press which we had from you (for a special order) answered very satisfactorily.—We are, Sir, yours respectfully,

JOHN BELL & CO.

J. W. PINDAR'S

Improved Double-Action

## TINGTURE PRESSES

(As approved of by Wholesale Chemists.)

Superior to Hydraulic,

On account of holding the pressure.

Prices for One Gallon,  
£3 10s.

For each additional  
Gallon, £1 10s. extras.

Directions for use  
forwarded with each  
article.

## NEW PATENT "ECCENTRIC" PILL COATER.

Invented and made by J. W. PINDAR, Patentee.

By an entirely new arrangement of mechanism this machine is constructed in a manner which supersedes all others, as, owing to its "Eccentric" motion, the Pills—which may be coated with Pearl, Silver, Gold, or Sugar, &c., &c.—are thoroughly separated from each other during the process, and retain their original spherical form, whilst being thrown round the receptacle with remarkable velocity.

These machines are equally adapted for coating large or small quantities; thus, a machine constructed for and suitable for coating 20 lbs. will coat 1 lb. only with equal efficacy, and in the most satisfactory manner.

Each machine is supplied with a Drug or Powder Sifter, to be attached if required, and which, fitting to top of Pill Receptacle, is subject to the same "Eccentric" motion as above mentioned.

This addition will be found of great advantage in the Laboratory, being both efficient and compact.

### PRICES.

No. 1.—For 2 lbs., £3 5s.;  
sifter for same, 7s. 6d.  
No. 2.—For 5 lbs., £4 15s.;  
sifter for same, 15s.  
No. 3.—For 10 lbs., £6 15s.;  
sifter for same, £1 5s.  
No. 4.—For 20 lbs., on Iron  
Standards, for Steam, Gas,  
or other power, £15 15s.;  
sifter for same, £2 5s.

The smallest Machines can be worked by Steam Power at a small additional cost.

Testimonials from all parts of the World may be seen on application to

J. W. PINDAR, 75 New Church Rd., Camberwell, LONDON.

## SURGICAL ELASTIC STOCKINGS AND APPLIANCES.

Merchandise Marks Act, 1887. 50 and 51 Vict., ch. 28.

*This Act is passed to enable the public to know when they have a genuine article offered to them.*

J. H. HAYWOOD, Nottingham, manufactures appliances which he guarantees as being made from the best materials that can be purchased and of the best workmanship. His make of Surgical Stockings, &c., may be known by the letter H, woven in the top of the articles, and his Trusses, Belts, Suspenders, &c., by his monogram, as in margin, stamped on them, to imitate which renders the imitator liable to imprisonment with hard labour for a term up to two years, and the article to be forfeited. Particular attention is called to the following, most of which are Patented or Registered, and cannot be obtained from any other house.

### PATENT VENTILATING UNDERCLOTHING FOR LADIES AND GENTLEMEN.

Chest Protectors, Vests, Knee-Caps, Sleeping Socks, Blankets, Skirts, Bodices, Respirators, Gout Gloves, &c., made from Pure Natural Wools, Pine Wool, and Scarlet Wool in its natural state, not woven, but enclosed in a Reticulated or Net-shaped Tissue, COMBINING WARMTH, PURITY, LIGHTNESS, and VENTILATION.

### Seamless Spiral Elastic Surgical Stockings.

Patent, made from Patent Machinery, and are on an entirely different principle from those generally in use.

The advantages are:—1. The Indiarubber Thread being run into the Fabric in one CONTINUOUS PIECE, and no hindring used, adapts itself to the shape of any leg, &c., and gives EQUAL PRESSURE throughout. 2. There are NO SEAMS to irritate the skin at the back of the leg, the HEEL, or the foot, and therefore no Binding to wear off. 3. The Indiarubber Thread being embedded in the Fabric, the surface is PERFECTLY SMOOTH on both sides, and does not mark the skin in ridges. 4. The Stockings have HEELS and TOES, if wished, so that the Appliance is kept firmly in its place. 5. They are perfectly porous, and allow the perspiration to evaporate. 6. They can be worn to take the place of ordinary Stockings, and being made from specially prepared indiarubber CAN BE WASHED, if care is used not to have the water too hot.

They are made in different sizes to correspond with the old make, and in different materials, THREAD, CASHMERE WOOL, and SILK.

### EXCELSIOR TRUSS.

Registered 20384.

This TRUSS is an improved form of Moc Main. It has a Spring inside the Pad, and from its peculiar form it fits firmly on the Rupture. The Band is shaped wide and fits firmly and comfortably into the back, and will not slip down.

### PATENT PILE SURGICAL STOCKINGS, &c.

This Invention consists in raising a Pile or Fleece of a Velvety character upon the inside of Surgical Appliances, as Stockings, Knee Caps, Belts, Elbow and Shoulder Pieces, &c., which, lying over the Cords of Indiarubber, effectually prevents them indenting the Limb, and produces an equal and more comfortable pressure upon the swollen veins, without affecting the elasticity. In Knee Caps and other Appliances for Rheumatism, Sciatica, &c., warmth, as well as Support is obtained; the Pile or Fleece being made from Pure Natural, Scarlet, or Pine Wool. In Belts it is a great improvement, as, besides securing warmth, if required it forms a soft surface which clings to the body and prevents rucking up and getting out of place, and does away, in most cases, with the necessity for understraps.

Chest Protectors, Anti-Rheumatic Knee-caps, Shin Guards, Trusses and Belts for Bathing. Athletic Supports for Wrists, Elbows, Knees, and Ankles. Stocking Suspenders. Trusses for Ruptures of all kinds, equal to any supplied in London, Paris, or New York. Ladies' and Gentlemen's Supporting Belts and Bandages. Poro Plastic Jackets and Steel Instruments for Curvature of the Spine moulded to the Patient as in London. Splints and Instruments for Deformed Feet and Legs. Chest Expanding Braces for Stooping Shoulders and Contracted Chests. Indiarubber Appliances, Invalid Furniture, Bath Chairs, Carriages, Crutches, Ear Trumpets, Throat, Ear, and Nose Instruments, &c. Artificial Arms, Legs, &c. Strong cheap articles for working men.

EXCELSIOR TRUSS.  
Registered.

Patent Ladies' Brace—New Style—  
Does not Cut under Arms.

Ladies' Brace—Old Style—Cuts  
under the Arms.

Ladies' Belt.

## MAGNETIC APPLIANCES

FOR

RHEUMATISM, SCIATICA, WEAKNESS, LUMBAGO, &c.

APPLIANCES TO FIT ANY PART OF THE BODY.

Bathing Caps, Sponge Bags, Suspensory Bandages, Chest Protectors, Medical Glass, Waterproof Sheeting, Bandages, Air Cushions, Crutches, Enema Apparatus, Instruments, Indiarubber, Dress Preservers, Nursing Aprons, Spinal Supports, Leg Irons, Infants' Belts, Bathing Gloves, Elastic Webs, Urinals, Druggists' Sundries.

Departmental Lists are printed of Bandages, Belts, Braces, Magnetic Appliances, Surgical Elastic Stockings, &c., Suspensory Bandages, Trusses, Chamols Leather Articles, as Hostery, &c., Surgical Indiarubber Sundries, Druggists' Sundries, Invalids' Winter Appliances, all or any of which will be forwarded on application, free by post.

PATENT.  
Showing the Pile lying over the indiarubber cords protecting them & forming a smooth soft surface to the limb.

SAMPLES AND PRICES ON APPLICATION.

## SOUTH LONDON INDUSTRIES (*Reprinted from the "South London Press."*), MESSRS. POWELL & BARSTOW'S NEW PREMISES:—

Messrs. Powell & Barstow, the well-known manufacturers of surgical instruments and appliances, some time ago evidently came to the conclusion that their business had overgrown the accommodation afforded by their premises at the foot of Blackfriars Bridge. It therefore became necessary to look out for a site whereon could be erected a building having sufficient superficial area to enable the firm to bring all the departments of their business under one roof. Of course, the advantages of this must be obvious to anyone who has the least knowledge of business matters, as much valuable time is wasted in communicating from office to manufactory, and thence, perhaps, to warehouse or some branch establishment where a particular article is being constructed. After casting about for some time, Messrs. Powell & Barstow fixed upon the site of the old Britannia Music Hall—a second or third rate hall which flourished, or, rather, existed, near the railway-bridge, 58 Blackfriars Road. The place for years had a very chequered career, and ultimately fell into the hands of one Harry Wallace, an American, who, failing to make music attractive, turned the hall into a billiard-room. He did little better at this, however, and in course of time the place was closed, no one seeming to have pluck enough to seek a renewal of the licence. The site runs back some 75 feet from the front of the building, and hence the large area required by Messrs. Powell & Barstow was obtainable. A gang of "house-breakers"—not of the burglar class—was set to work, and in a short time all that was left of the Britannia Music Hall was a heap of bricks. Messrs. Powell & Barstow then accepted a design prepared by Mr. A. W. Osborn, the freeholder's architect, with one or two internal modifications suggested by their surveyors, Messrs. Rutley & Sons. The architect's plans have been efficiently carried out by Messrs. Hoare & Sons builders, of Blackfriars Road, and the result is an edifice which externally is an ornament to the thoroughfare, and internally—even in the matter of the smallest detail—is admirably adapted for the purpose for which it was designed.

The front elevation is of red brick, with terra-cotta ornaments, and the building consists of five floors of 75 feet in depth by 18 feet in width. On the lower floor will be erected the necessary machinery for lighting the building by electricity and providing the motive-power for the various machines used in the trade. Above this are the warehouse and offices, while the upper floors are occupied by busy workers of both sexes, who are engaged in the production of the various appliances known to medical science for which Messrs. Powell & Barstow have established a world-wide reputation. It is mainly in what are technically called elastic-gum or rubber goods that the firm deals, and though a description of their manufacture might be interesting, it would be disclosing trade secrets to go too much into detail.

Strange as it may seem, Messrs. Powell & Barstow claim to be the only makers of elastic stockings in London, the trade having been up to a recent date entirely in the hands of the manufacturers of Notts and Derby. This branch of the business is carried on on the second floor, and employs a number of skilled workers. There is ample accommodation for over 150 hands, male and female, and the sanitary arrangements—a very important matter in all cases, but especially where both sexes are employed—are as perfect as the latest discoveries in sanitary science can make them. Messrs. Powell & Barstow are to be congratulated on the step they have taken, and in their new quarters will probably largely increase the already extensive business carried on by them in a less pretentious building.

KNEE, OR FRACTURE.

## INSTRUCTIONS FOR MEASUREMENT, &c.

### JACKET.

(In cases of slight deformity).—  
Circumference at axilla.

" waist.

" hips.

Length from axilla to great trochanter.

In severe angular cases circumference over apex of curve, position of same, and contour should be given; in lateral cases a description of the case.

In all cases it must be stated if for male or female.

### CERVICAL JACKETS.

Same measurements and circumference at neck, and length from centre of neck to axilla.

Any part of the Jacket can, in the process of manufacture, be left soft.

These Splints can be fitted perfectly to the Patient if softened either by hot water or in a Heater made for the purpose. The material becomes quite hard again in two or three minutes.

### LEG SPLINT.

Circumference at top of thigh.

" above knee.

" at knee.

" below knee.

" calf.

" ankle.

Length of splint as required.

State if for right or left leg.

When the foot part is required, also circumference at heel and instep, and length from centre of knee to ground.

If the limb is contracted, the contour should be given.

Made with soft front or with hinge at back, and with foot part, if required.

**I. ISAACS & CO.,** Glass Bottle Manufacturers,  
25 Francis St., Tottenham Court Rd., LONDON, W.C.

Established 50 Years. Bankers—London and Westminster Bank.

PROVISIONAL PATENT, No. 1111.

# A1 "ROLLER" MENTHOL.

The most sensible pattern yet brought out, as it won't break! 3/6 dozen carded.

*The Chemist and Druggist* says:—"Messrs. Shirley claim that it is so strong that if accidentally dropped it does not break—an assertion of which we have proved the correctness by repeatedly dropping the cone upon the floor from a height of 6 or 7 feet. The cone shape, in which Menthol is generally made, easily breaks, and much of it is therefore wasted, whereas the rolling-pin shape may be used right up to centre."

*Above evidence is sufficient to show this is the best shape yet brought out.*

**Guy's Tonic.**

We think it advisable to inform the Trade that the medicines sold by us do not contain any poisonous ingredient, and can be sold with perfect confidence by Chemists to their own profit and their customers' safety and benefit. Our preparations are now in brisk demand in all parts of the United Kingdom, and our advertising policy will be steadily enlarged.

**Guy's Fruit Pills.**

Guy's Fruit Pills are usually required in association with Guy's Tonic to secure the best results, and instructions to this effect accompany each bottle of Guy's Tonic. It is quite evident, therefore, that wherever Guy's Tonic is in demand Guy's Fruit Pills will be asked for.

We will send 1 dozen of the 1s. 1½d. size post free to any Chemist on receipt of remittance for 10/6.

Depot and Agency—BARLIN & FIELD, 16 MARK LANE, LONDON, E.C.

## "THE LEADING HOUSE."

We make for the Trade the best milled and superfatted Soaps, toilet as well as medicinal. Instead of making "Bronnley's Soaps" we manufacture "Private Brands," and have the satisfaction to find that our friends give steadily increasing orders in our lines.

Can this be otherwise?

Our goods give credit to those who handle them.

### H. BRONNLEY & CO.,

35 Danbury Street, Islington,

LONDON, ENGLAND.

CHEMIST AND DRUGGIST:

BRITISH AND COLONIAL DRUGGIST:

H. Bronnley & Co. have struck out a line which is useful to the trade, and ought, consequently, to be profitable to themselves. They are manufacturing private brands of toilet soap. The samples they showed us were variously entitled, and bore the names of well known and highly-reputable pharmaceutical firms. Their soaps are superfatted, and the samples we were shown were, in respect of emolence, fragrance, and moulding, of a very high quality.

. . . Messrs. H. Bronnley & Co., who make it their specialty to manufacture private brands of de-hydrated and superfatted toilet and tooth soaps. We understand that this firm is patronised by the best buyers, and we believe that profitable business may be done with their attractive and genuine goods.

## SUPERFATTED MEDICINAL SOAPS

PREPARED FROM PRESCRIPTIONS AND UNDER THE CONSTANT CONTROL OF

Dr. MED. J. EICHHOFF, Senior Physician to the Wards for Skin and Venereal Diseases of the Elberfeld Hospital.

### FIRST SERIES.

A PURE AND PERFECT ARTICLE FOR

Teeth, Gums, and Breath.

Will purify and beautify the Teeth with a pearly whiteness; polish the enamel; prevent tartar; destroy all living germs, and keep the mouth in a delicious condition of comfort, health, purity, and fragrance. Non-gritty, and absolutely pure and harmless to use. Price One Shilling, in handsome Enamel Box.

The POPULAR DENTIFRICE, which Sells at Sight,

Handsomely put up in Show-cases, as here shown. Printed in Twelve Colours. An ornament to any window.

Price 7/6 per dozen, of all Wholesale Houses.

The COURT CIRCULAR says:—"Puriline' emanates from the laboratory of 'Bunter's Nervine' fame. Bunter's previous preparations for the teeth have received such high encomiums from medical men that it is not surprising that this latest production should have received the recognition and approval of those best qualified to pronounce on its merits."

H. M. STANLEY, D.C.L., LL.D., the great African explorer, says:—"I use 'Puriline' Tooth Polish and Wash'; am much pleased with both."

The Countess of ROSSLYN writes:—"Have been recommended to use your Dentifrice, called 'Puriline.' It is extremely nice; please send me six more."

Show-cards and Handbills supplied by

**A. WILSON, 422 Clapham Road, LONDON, S.W.**

# MATHER'S

## CHEMICAL FLY PAPERS

DYER STREET, HULME, MANCHESTER.

Gentlemen,—At this season of the year I would call your special attention to my **CHEMICAL FLY PAPERS**, which are being sold very extensively by the London Oilmen, Grocers, &c. (many of whom, during the Summer Season, order from 150,000 to 250,000), and I feel sure there remains a large business to be done throughout the Provincial towns.

These Fly Papers have gained in a few years a reputation unprecedented in the sale of articles of this class, having always given full satisfaction. The method of their manufacture is entirely novel, and by it the difficulty heretofore experienced in making every sheet equal in strength is entirely obviated; thus, what is so often found in connection with other fly-destroyers—viz., Sheets which *may* be effectual being mixed with others entirely worthless in the same packet—is completely provided against. Particular attention is directed to this fact, that **ALL MATHER'S CHEMICAL FLY PAPERS** are, by Special Machinery, treated exactly alike, every square inch of each sheet being guaranteed to contain sufficient and equal amount of destructive ingredients. The Papers retail at One Halfpenny each; are put up in Packets of 100 and 250 each, and in Boxes of 500.

### TERMS.

|                                                                            |                                          |
|----------------------------------------------------------------------------|------------------------------------------|
| For quantities of <b>1,000, 20/-</b> per <b>1,000, less 20 % discount.</b> | Special quotations for large quantities. |
| “ “ <b>5,000, 20/-</b> “ “ <b>25 %</b> “                                   |                                          |

I will in all cases protect the Trade by adhering strictly to above terms. Posters and Advertising matter with each order.

Yours respectfully,

Address—DYER STREET, HULME, MANCHESTER.

## Accidents will happen

AND SMALL WORRIES  
WILL CONSTANTLY  
CROPUPEVEN IN THE  
BEST REGULATED  
HOUSEHOLDS

For

instance:—

Your Boots may require softening.

Your Window Sashes or Drawers may “stick.”

Your Carriage or Perambulator Wheels may want greasing.

You would like to go like “greased lightning” on your Bicycle.

You would like to see your Golfing “cleeks” and “irons” shine like silver, and kept free from Rust.

You would like to see your Waxcloth in the hall or lobby look as good as new.

Your Baby might most unfortunately tumble into the fire, or get itself scalded accidentally, and so on.

WELL,

You would be glad to know what is the very best thing to do in any of the above circumstances.

Kindly allow us to point out a certain and sure way of overcoming any of the little difficulties.

Puzzle out the words in the Double Acrostic appended, and the initials and finals these will tell you what to do and **DON'T YOU FORGET IT!**

## THE DOUBLE ACROSTIC.

1. No State Ceremonial or Court of Justice complete without them.
2. What Fleming's Oil is as regards both *the mark* and *date*.
3. A gay and festive scene.
4. The year when Fleming's Business was first established.
5. What you often do to an acquaintance in the street.
6. A group of Islands, belonging to Britain, in the Pacific Ocean.
7. What we are all *saying*, we will turn over a new, but alas! seldom do.
8. A feeling of lassitude, easily overcome by working out this Acrostic.
9. A measured distance.
10. How most people like to have their drinks in very hot weather.
11. The result of trying to *fry fish* in Fleming's Oil.
12. A celebrated Italian Patriot.
13. What Fleming's Oil will do freely everywhere.

# THE PHOENIX

## IMPROVED PATENT

# ALARM CASH TILL.

No Key to be Lost. Susceptible of 32 Changes.

A Perfect Day Safe,  
and certain  
preventative against  
petty thefts.

The act of closing  
locks the Till.

Important  
Press Extracts  
on other side.

**500,000 NOW IN USE**  
**IN THE UNITED STATES.**

**A** REQUIREMENT long felt by tradesmen and others, especially those who have at times to leave their shop or office unattended. It dispenses with the inconvenience, loss of time, unbusiness-like appearance of locking and unlocking, being perfectly secure directly it is closed, and giving an alarm should any but an authorised person attempt to open it. It is a perfect **terror** to cash-till thieves.

The lock has five strong bolts, giving 32 changes, which are instantly made. For example—a person knowing how to open it would not be able to do so directly after a change had been made, unless informed which check was on, thus **affording perfect security to employers.** The specie drawer is turned in a solid block. It has six solid bowls, one each for sovereigns, half-sovereigns, half-crowns, florins, shillings, and sixpences, and two large spaces for coppers, rendering the giving of change very easy. Below the cash receptacle is a compartment for notes, invoices, stamps, &c., &c. The whole as a piece of cabinet work is perfect, and without its special advantages well worth its cost. Fixed by four screws in as many minutes by any person.

These Cash Tills can be obtained from all Shop Fitters, Ironmongers, Merchants, Shippers, etc.,  
at 12/6 each.

Trade Prices on application to the Manufacturers.

## EXTRACTS FROM THE PRESS.

Sent to jail for one month for attempting  
to open A Phœnix Alarm Cash Till.

### EXTRACT FROM

*The Liverpool Mercury*, April 19th, 1892.

#### BIRKENHEAD POLICE COURT.

MONDAY, APRIL 18th.

BEFORE MR. PRESTON.

IMPUDENT ATTEMPTED ROBBERY.—Thomas Burchall, a young man, was charged with attempting to steal money from the shop of Mr. W. P. Pritchard, Baker, 251, Borough Road. An assistant stated that about one o'clock on Saturday afternoon, whilst engaged at the telephone, he heard the till bell ring, and on looking round saw the prisoner making off from the counter. He chased him and succeeded in catching him about 50 yards from the shop. There was between £4 and £5 in the till, and had the bell not rung he might have easily made off with the money. The prisoner, who now pleaded guilty, was sent to jail for one month with hard labour.

### EXTRACT FROM

*The Manchester Evening News*, Monday, February  
1st, 1892.

#### DARING TILL ROBBERIES FROM MANCHESTER HOTELS.

At the City Police Court to-day, before Mr. Headlam and Alderman Mark, two young men named George Livesey and William Percival were charged with robbing the tills of several public-houses in the City. Three cases were heard by the Magistrates. In the first, Livesey went into the Stonemason's Arms, Lower Cambridge Street, and tendered half a sovereign in payment for some brandy. The barman got the change from the sideboard in the bar within sight of the prisoner, who shortly afterwards left. Subsequently Percival and another man entered the bar parlour and kept the waiter in conversation for some time. In the meantime, it was alleged Livesey re-entered the place and took a parcel of money amounting to £2 15s. from behind the bar. On another day the prisoner Percival and another man not in custody went into the Blue Ball public-house, Chester Road, and after being served with drink they asked the wife of the manager, Arthur Longson, who had served them, for one of the local papers. She went into the kitchen to get the paper, and her husband, who entered the room in which the bar was immediately after she had left, was just in time to catch Livesey, who joined the other two men, with his hand in the till. Catching sight of Mr. Longson, the prisoner remarked, "I was just showing my friends how easily you could get robbed." (Laughter). Longson announced his attention of getting a policeman, whereupon Livesey made off, followed directly afterwards by the other two. In the third case Percival, accompanied by a friend, went into the St. Peter's Hotel, Peter Street, kept by Mr. Mottram,

and ordered some beer. They were drinking this when Livesey joined them and also ordered a drink. The barmaid left the room to fulfil the order, and on returning found the three men had disappeared with the contents of the till. A description of the prisoners was given to the police, and the two were subsequently apprehended by Detectives Standing and Bonney. Livesey, who had been previously convicted of a similar offence, was sent to gaol for three months, and Percival for six weeks.

#### THE ERRAND-BOY AND THE TILL.

If his own story is to be believed, William Edward Hardwicke, 15, not only stole £25, but managed to spend it all in little over a month. The boy, it was alleged at Marlborough Street Police Court on Wednesday, entered the service of Messrs. Hill & Co., Chemists, as an errand-boy on April 30, sleeping in the house. On the following Saturday night the day's takings, amounting to about £25, were collected, tied up in packets, and put in one till. At half-past ten o'clock both the money and the new errand-boy were missing. When Detective Faulkner arrested the boy he said he had spent the money. Mr. Hannay remanded him.

### EXTRACT FROM

*Manchester Evening News*, March 3rd, 1892.

#### DARING TILL ROBBERY.

At the City Police Court this morning, before Mr. S. Chesters-Thompson and Mr. R. Hall, a young man named William Harrison was charged with stealing a bowl containing £10 in silver from a till in the shop of Mr. E. Tucker, Baker, Oldham Road. Mrs. Tucker said that about a quarter to twelve o'clock on Saturday night her husband left the shop to get shaved, and she went into a back room for a brush. She was only absent for about a minute, and on re-entering the shop she found the prisoner in the act of taking a bowl containing £10 in silver from the till. Witness got hold of him just as he got outside the door. In the struggle he dropped the money on the ground, and the whole of it was snatched up by the crowd which had gathered round the spot. Mrs. Tucker was unable to prevent the money being taken, as she was obliged to run back into the shop to secure the gold which was also in the till. Information was given to the police, and from the description furnished by Mrs. Tucker, Inspector Johnson arrested the prisoner yesterday. On being placed among several other men he was at once picked out by Mrs. Tucker as the man who had stolen the money. The prisoner denied that he was guilty, and called evidence to prove that he was in bed at the time the robbery was committed. He was committed for trial at the Sessions.

## CHEMIST'S COUNTER SHOW - CASE

Stands unrivalled for style, convenience, and beauty; occupies but a small space on the counter; is made to open at the back or in the front to suit the convenience of the purchaser and the position it is intended to occupy. It is a splendid advertisement, attracting the notice of all customers—proves a great source of profit to all who possess it. Our Homœopathic Medicines are known all over the world, are in great demand everywhere. More than 2,500 Chemists in the United Kingdom alone stock them, besides having agencies in nearly all the British Colonies, in India, Africa, New Zealand, China, and other parts of the world.

Send for Indent Forms, Catalogues, and Price List with best Cash Terms before ordering elsewhere.

## BUSINESS OBSERVATIONS FOR THE TRADE.

**ORDERS.**—In giving your Orders, kindly make use of our Order Cards, or Order Sheets, which require a half-penny stamp. If this is omitted we not only have to pay double postage, but the Order is not put into our letter-box with the stamped Orders, but brought later on in the morning, and thus causes delay in sending off the Goods. Please write Name and Address, with Mode of Conveyance, distinctly on the Card; if to be enclosed, *Name and Address* of the House it is desired the parcel should be sent for enclosure—except, of course, the well-known houses.

**RETURNED BOXES.**—These will be credited at Invoice Price, if received back in good condition, carriage paid. To prevent mistakes, it is better always to advise when a box has been returned, and also by what conveyance.

**AGENTS' SHOW-CASES.**—Of these we have six sizes, viz.: £21, £10 10s., £6 6s., £4 4s., £3 3s., and £2 2s. The £4 4s. is most generally in demand among the Chemists and Druggists, and the £6 6s., £10 10s., and £21 among Patent Medicine Houses, Drug Stores, and Colonial buyers. The stock in these cases are selected with care, and only well-known and saleable Medicines are put into them.

All the Cases can be had fitted with 6d. and 1s. stock; 9d. and 1s. stock or all 1s. stock, as preferred.

In fitting up our various Agents' Counter-Cases, our aim has been, in each, to supply what was saleable only; to put the Medicines up securely and in good style, so that, externally, they might be attractive and presentable. Every care is taken in preparing the various Medicines; and being reliable, as well as neatly put up, we have succeeded in creating a large demand, and our brand has become well-known both at home and abroad. To facilitate the sale of Homœopathic Medicines, L. & R. supply, when requested, Handbills with Agent's Name; also Small Books for gratuitous distribution, giving Plain Directions for the treatment of Common Complaints; also Outlines of Treatment for the Horse, Cow, and Dog; with a List of the Homœopathic Medical Practitioners, and much other useful information. These Books tend greatly to increase sales, and will be found a most efficient method of advertising. Our clients are strongly recommended to make use of the Order Forms sent with each Price List, as it saves time in writing out the orders, and facilitates business.

**KEEPING UP STOCK.**—As many of our Agents are not aware what constitutes a saleable stock, they are referred to the list of most saleable Medicines on page 5; and they will do well to compare their stock in hand with this from time to time, to see what has been sold, and to guide them in ordering fresh stock.

**REPLACING SALES.**—Most Chemists are in frequent communication with some of the London houses, and small parcels can readily be sent for enclosure, either to the Drug Houses or Patent Medicine Warehouses. Orders by post can always be sent in, as a rule, on the same day they are received, or despatched by rail, parcel post, or small parcel delivery carriers.

**ACCOUNTS.**—These are rendered half-yearly, at June 30th and December 31st, and are due on the 15th of the following month. For special discount for cash, see page 4.

**REMITTANCES.**—Cheques to be made payable to us, and crossed "*Alliance Bank.*" Post-Office Orders should be made payable at the Vere Street District Office, or the General Post-Office, and crossed "*Alliance Bank.*"

**EXPORT TRADE.**—Special Order Forms have been prepared for the Export Trade, one of which will be found in this Price List. Copies can be forwarded on application to the firm.

**RETURNED GOODS.**—Goods when returned from error in giving the order must be sent carriage paid, and not as a returned empty.

**DESPATCH.**—All Orders are despatched the same day as received, except where any special preparation has to be made.

# LEATH & ROSS'S

## £10 10s. AGENTS' SHOW CASE.

Contents realize £22 2s. 6d.

DIMENSIONS.—Length 22 inches.  
Breadth 15     "

SIZE. Subject to Discount for Cash. PER DOZ.

THE general demand which there now is for Homœopathic Medicines, renders it incumbent upon the Chemist and Medicine Vendor who is solicitous to meet the wants and requirements of his numerous clients, that he should be in a position to supply, not only the many Patent or Proprietary Articles, which form such an important part of every Chemist's business, but also Homœopathic Medicines, prepared by some well-known Homœopathic Pharmaceutist: and having for many years past enjoyed the confidence of Chemists and others who are in the habit of supplying the Public with Homœopathic Medicines, L. & R. can confidently recommend their preparations. More than 2,500 Chemists and Patent Medicine Vendors in the United Kingdom alone have accepted an Agency for their Medicines; and besides sending them to nearly every part of the civilised world, they have Agents for their Preparations and Medicines in India, Africa, China, America, New Zealand, the Australian Colonies, France, Newfoundland, and Nova Scotia. Indeed, it might with truth be said that the sun never sets upon those regions where L. & R.'s Medicines may be obtained. The efficacy of Homœopathic Medicines in combating disease cannot now be denied: it is useless to attempt by ridicule or scorn to pooh-pooh them; they have stood the test of the severest persecution, and gained lustre in the ordeal. That there is healing virtue in them, both the intelligence and the common sense of the age have now proved; and Homœopathic Practice takes its place among men as an established fact, as a system the truth of which has been endorsed by thousands.

## WHOLESALE PRICE LIST OF MEDICINES.

PUT UP READY FOR SALE.

**TINCTURES**—Sixpenny Bottles, 3/- per doz.

## HOMŒOPATHIC MEDICINES,

### IN TINCTURES AND PILULES.

#### COMMON COMPLAINTS and the Medicines usually prescribed for them.

##### FOR THE USE OF AGENTS.

HOMŒOPATHIC MEDICINES are not only very useful, but so simple in their administration, so mild and gentle in their action that the youngest and most delicate may take them without sustaining any injury by so doing.

*The following is a list of some of the common complaints, together with the Homœopathic Medicines usually prescribed :*

|                                             |                                              |                                                |
|---------------------------------------------|----------------------------------------------|------------------------------------------------|
| Abscess - - - <i>Bell. Merc. S.</i>         | Faceache - - - <i>Spigelia, China</i>        | Sleeplessness - - <i>Bell. Coff. Puls.</i>     |
| Appetite, Loss of - <i>China</i>            | " - - - <i>Neuraline</i> , externally        | Sore Throat - - <i>Bell. Merc.</i>             |
| Aphthæ (Thrush) - <i>Merc. S.</i>           | Flatulence - - - <i>Nux. Puls. Carbo. V.</i> | Spasms in Stomach <i>Cocc. Nux.</i>            |
| Asthma - - - <i>Arsen. Ipec.</i>            | Fever, Simple - - <i>Acon.</i>               | Spots, Heat - - - <i>Acon Rhus.</i>            |

*Dose.*—One or two drops of Tinctures, two Pilules, or four Globules, every two hours, or three times a day. For Young Children half, and Infants one-fourth of the above quantity.

The above medicines may be taken in alternation or singly; if three medicines are prescribed, the first named should have the preference; if that fails after a few doses, try the second; or that not relieving, the third.

For the successful treatment of all Common Complaints see Laurie's Homœopathic Guide for Family use, re-edited and re-written by Dr. Gutteridge, price 1/-; to be had of Leath & Ross, London, and all Chemists and Patent Medicine Vendors.

#### List of the Principal Medicines which should always be kept in stock, being in constant demand, and the Complaints for which they are prescribed.

##### FOR THE USE OF AGENTS.

|                |                                                                                                                                        |

# LEATH & ROSS'S SPECIAL PREPARATIONS — AND — PROPRIETARY ARTICLES.

\*\*\*\*\*

**AMYLENE** (Liquid or Paste).—An elegant toilet preparation, imparts a beautiful softness and elasticity to the skin. May be applied to the hands, face, or neck. In bottles, 1/6 & 2/6. Trade price, 12/- & 20/- doz.

**ANTI-CATARRH** (Smelling Salts).—An excellent and convenient remedy for Colds, Catarrh, Influenza, and Hay Fever, preventing their development in the incipient stage, and rapidly checking and curing them in their more advanced stages. In bottles, 1/9 and 2/9. Trade price, 15/- and 22/- doz.

**ANTI-ECZEMA**.—Of great use in Scrofula, and skin affections, allaying irritation, cleansing the lymphatic and sanguineous systems, purifying the blood, and improving the general health. In bottles, 2/9 and 4/6. Trade price, 22/- and 36/- doz.

**ANTI-EMETICUS MARITIMUS**.—The best and safest specific for Sea-sickness. It not only prevents and cures this distressing malady, but keeps the system in perfect health. In boxes, 2/9 and 4/6. Trade price, 22/- and 36/- doz.

**ANTI-RHEUMATICUS**.—A new and remarkable remedy for Rheumatism (Acute or Chronic), Gout, Rheumatic Gout, Pains and Enlargements of the Joints, Lumbago, Sciatica, &c. In bottles, 1 1/3, 2/9, 4/6 and 10/6. Trade price, 9/6, 22/-, 36/-, and 84/- doz.

**ANTISEPTIC TOOTH TINCTURE**.—See Tooth Tincture.

**ANTISEPTIC EAU DE COLOGNE**.—An elegant and agreeable preparation for preventing infection, and for producing a healthy atmosphere in sick rooms and closed apartments. In bottles, 2/6 and 4/6. Trade price, 20/- and 36/- doz.

**ARBOR VITÆ**.—Eradicates Warts and Corns, without the slightest pain or inconvenience, and prevents a return of them. In bottles, 2/9 and 4/6. Trade price, 22/- and 36/- doz.

**ARNICA CERATE**.—Prescribed in Abrasions of the Skin, Bruises, Sprains, &c. In bottles, 1/- and 2/-. Trade price, 8/- and 16/- doz.

**ARNICATED OPODELDOC**.—Of great service in Rheumatism and Gout, quickly relieving the pain; also an excellent application for Sprains and Strains, &c. In bottles, 1 1/3 and 2/3. Trade price, 9/6 and 19/- doz.

**AUROSINE**.—The best remedy extant for Chapped Hands, and for keeping the Skin beautifully soft and white. In bottles, 1/-, 1/6 and 2/6. Trade price, 8/-, 12/- and 20/- doz.

**BELLADONNA LINIMENT**.—A useful application for Hoarseness with Loss of Voice, Sore Throat, hard, dry Cough, and Hooping Cough. In bottles, 1/9 and 2/9. Trade price, 15/- and 22/- doz.

**BERBERINE**.—The specific remedy for the Liver and its derangements. Cures Bilious Headache, Constipation, Nausea, Depression of spirits, Indigestion, &c., and is perfectly harmless. In bottles, 1 1/3, 2/9, and 4/6. Trade price, 9/6, 22/- and 36/- doz.

**BRYONIA LINIMENT**.—Is useful for Stiff Neck, Rheumatism, Lumbago, Gout, Stiffness of the Joints, and Pleurisy. In bottles, 1 1/3, 1/9 and 2/9. Trade price, 9/6, 15/- and 22/- doz.

**CALENDULA CERATE**.—Prescribed in Excoriations, Abraded Skin, Chapped Lips, Sore Nipples, &c. In bottles, 1/- and 2/-. Trade price, 8/- and 16/- doz.

**CAMPHORATED OIL**.—Useful in Sore Throat, Cold on the Chest, and as an external application where a stimulant is required. In bottles, 1 1/3 and 2/3. Trade price, 9/6 and 19/- doz.

**CAPSICINE EMBROCATION**.—Most useful as a local application in severe or flatulent colic; is an excellent substitute for mustard poultice, does not blister. In bottles, 1/9 and 2/9. Trade price, 15/- and 22/- doz.

**CHENOPodium WORM POWDERS**.—These powders have marvellous power in expelling Worms from both Children and Adults. They are tasteless and harmless, and give tone to the general health. In boxes, 1/9 and 2/9. Trade price, 15/- and 22/- doz.

**CHILBLAIN LINIMENT**.—This has been tried for many years and has proved one of the best applications for speedily removing the irritation and curing chilblains. In bottles, 1 1/3, 2/9 and 4/6. Trade price, 9/6, 22/- and 36/- doz.

**CORAL DENTIFRICE**.—Possessing remarkable cleansing and preservative properties, imparts a beautiful whiteness to the Teeth and is perfectly innocuous. In boxes, at 1/-, and bottles, 1/3 and 2/6. Trade price, 8/-, 10/- and 20/- doz.

**DORÉ TRANSPARENT GLYCERINE SOAP**.—This elegant Soap is unrivalled as a Toilette Requisite; it is singularly free from any irritating property, softens the water, is attractive in appearance, and pleasant to use. In boxes containing three cakes, 1/- and 1/6 each. Trade price, 8/- and 12/- doz., NET.

**GLYCERINE BALSAM**.—An excellent substitute for Lip Salve or Cold Cream, being more healing and softening. In glass jars, 1/-, 1/6, and 2/6. Trade price, 8/-, 12/-, and 20/- doz.

**GLYCERINE CREAM**.—An unctuous and agreeable Pomade for the Hair, nourishing and promoting its growth and giving it a beautiful gloss and smoothness. In bottles, 1/6 and 2/6. Trade price, 12/- and 20/- doz.

**GLYCERINE OPODELDOC**.—A painless but efficacious application for Corns, Bunions, and Callosities. In bottles, 1 1/3, 1/9, and 2/9. Trade price, 9/6, 15/- and 22/- doz.

**GLYCERINE PASTE**.—A convenient and admirable preparation for keeping the Hands and Lips free from Chaps. In pots, 1/-, 1/6, and 2/6. Trade price, 8/-, 12/-, and 20/- doz.

**GLYKALINE**.—The quickest and best remedy extant for Colds, Catarrhs, Influenzas, and Coughs arising from Colds, Asthma, Hay Fever, &c. In bottles, 1 1/3, 2/9, 4/6, and 10/6. Trade price, 9/6, 22/-, 36/-, and 84/- doz.

**HAIR WASH** (Vegetable).—A refreshing, cooling, and stimulating preparation, rapidly promoting the growth of the Hair, and being without oil can be used constantly with the utmost cleanliness. In bottles, 1/-, 2/-, and 3/6. Trade price, 8/-, 16/-, and 28/- doz.

**HAIR RESTORER**.—Strongly recommended for restoring the Hair to its natural colour when it is changing through sickness or ill-health and for preventing it falling off. Unlike most Hair Restorers, it is utterly devoid of all deleterious matter. In bottles, 1/6, 2/6, and 4/6. Trade price, 12/-, 20/-, and 36/- doz.

**HAMAMELIS OINTMENT** (Cerate).—Prescribed for Varicose Veins, Piles, Ulcers, &c. In pots, 1/- and 1/6. Trade price, 8/- and 12/- doz.

**NEURALINE**.—Pronounced by thousands to be the greatest boon ever invented for those who suffer from Neuralgia, Faceache, Toothache, Tie, Lumbago, Sciatica, and all Nerve Pains, one single application generally curing like magic. In bottles, 1 1/3, 2/9, 4/6, and 10/6. Trade price, 9/6, 22/-, 36/-, and 84/- doz.

**ODONTALGIC ESSENCE**.—A liquid stopping for Decayed Teeth, affords complete protection to Exposed Nerves, can be applied by anyone in an instant. In bottles, 1 1/3, and 2/9. Trade price, 9/6 and 22/- doz.

**OZONISED OIL**.—Possesses remarkable properties in Nourishing and Promoting the Growth of the Hair, Removing Scurf, and Preserving the Natural Colour. A most agreeable preparation to use. In bottles, 1/-, 1/6, 2/9, and 5/-. Trade price, 8/-, 12/-, 22/-, and 40/- doz.

**PHARMACODERMIS**, or Artificial Skin Producer.—This has remarkable healing properties in Slight Wounds and Abrasions of the Skin, affording at once protection to the part. In bottles, 1/9 and 2/9. Trade price, 15/- and 22/- doz.

**PHOSPHO-MURIATE OF QUININE**.—The specific for Debility, Exhaustion, Loss of Appetite, &c., an admirable Tonic in all cases of Weakness or Nervousness. In bottles, 1 1/3, 2/9, and 4/6. Trade price, 9/6, 22/-, and 36/- doz.

**PHOSPHORINE**.—For vitalizing the Blood, and restoring Nerve Power. In bottles, 1 1/3 and 2/9. Trade price, 9/6 and 22/- doz.

**RHUS LINIMENT**.—Preferred by some to the Opodeldoc. In bottles, 1/- and 1/6. Trade price, 8/- and 12/- doz.

**RHUS OPODELDOC**.—Most efficacious in relieving and curing Rheumatic Pains in the ligaments, tendons, and muscles. An excellent application for Old Strains and Sprains. In bottles, 1 1/3 and 2/3. Trade price, 9/6 and 19/- doz.

**SKIN SOAP**.—Recommended for Pimples and all kinds of Skin Irritation. In boxes, containing three cakes, 1/3. Trade price, 10/- doz., NET.

**TOOTH TINCTURE**.—The best preparation for the preservation of the Teeth and Gums, removes Tartar, sweetens the Breath, hardens the Gums, arrests decay, and refreshes and cools the Mouth. In bottles, 1/-, 1/6, 2/6, and 4/6. Trade price, 8/-, 12/-, 20/-, and 36/- doz.

**UNMEDICATED DENTIFRICE**.—Specially prepared for the use of those under Homeopathic Treatment; highly approved by the Medical Faculty as an excellent Dentifrice. In boxes, at 1/-, and bottles, 1/3 and 2/6. Trade price, 8/-, 10/-, and 20/- doz.

**WORM POWDERS**.—See Chenopodium Worm Powders.

## SWING FRONT ECLIPSE.

We are manufacturing the Eclipse to order, with a double swing front, enabling the operator to tilt the lens in any direction, and with side supports or wings of special construction to allow of focussing or of the use of lenses of different foci. This is specially designed to meet the requirements of those who use the Eclipse for general purposes, and only occasionally work it at fixed focus. The usual Eclipse apparatus is more suitable for those to whom simplicity of manipulation is a consideration.

## SHEW'S POCKET CAMERA CLIP.

For attaching the Eclipse or other small Camera to any support, such as a wall, gate, fence, etc., particularly useful to yachtsmen. Price 0/6.

THE CYCLE CLIP, for attaching to the handle-bar of tricycle, with ball and socket for levelling the camera. Price 10/6.

FAC-SIMILE SIZE OF QUARTER-PLATE LENS AND SHUTTER.

## SHEW'S ECLIPSE LENS AND INSTANTANEOUS SHUTTER PATENT.

We are now stocking the above in all sizes at the following prices, including Diaphragms and Instantaneous Shutter:—

| For Pictures. | Equiv. Focus. | Price.  | For Pictures. | Equiv. Focus. | Price.  |

## CASES FOR ECLIPSE CAMERAS.

The Field Glass Case, collapsible, of Leather, in which the Camera can be carried closed or open for use  
The Registered Case, for the same purpose as above, but containing three Double Backs, or Roll Holder or Changing Back ...

The Detective Case. A strongly made box covered in leather, with two sunk finders to carry the Camera extended for use ...

Solid Leather Carrying Cases, to contain Camera, Lens, and 3 backs, 4½ × 3½, 11/6; 6½ × 4½, 14/6.  
Waterproof Canvas Bags, 4½ × 3½, 5/6; 6½ × 4½, 7/6.

J. F. SHEW & CO., 87 & 88, NEWMAN STREET, LONDON, W.

# SHEW'S HAND CAMERAS (Continued).

## SHEW'S REPEATOGRAPH (Patent).

MAGAZINE HAND CAMERA.

The perfection of simplicity, no bags, no heavy metal sheaths, one movement only changes the plate and sets the shutter. Price £2 2s.

With Rectilinear Lens and Sunk Finders, covered in leather, £3 10s.

## SHEW'S UNIVERSAL HAND CAMERA,

As shown at the Convention of 1891.

This Camera has been constructed for the purpose of enabling the operator to use glass plates, cut films, or the continuous rolls of film, at will, the back being so arranged that double backs for glasses or for film or roll holders, are interchangeable in one fitting, it is equally suitable for time or for hand exposures; having a range of focus from  $2\frac{1}{2}$  to 7 inches, it can be used with various lenses. The front falls down with a spring action and forms the base on which the bellows extension is drawn; this is provided with a vertical and horizontal rising front and a rapid means of fixing at any point with a lever clamp, which also binds the travelling front to the base. The whole covered in morocco, quarter-plate measuring when closed,  $7\frac{1}{4} \times 5\frac{1}{2} \times 5\frac{1}{2}$ .

The Camera with one double back,  $4\frac{1}{4} \times 3\frac{1}{4}$  ... £2 17 6  
do. do.  $5 \times 4$  ... 3 3 0  
do. do.  $6\frac{1}{2} \times 4\frac{1}{4}$  ... 3 5 0

The Camera fitted complete with Eclipse Lens, and Instantaneous Shutter (patent), three double backs, focussing screen and finder, for plates  $4\frac{1}{4} \times 3\frac{1}{4}$  £6 10 0  
Other sizes in proportion see special circular.

## THE ANO (Patent).

Shew's New Collapsible Camera, which instantly springs into position for use, forming a very light rigid Camera weighing only seven ounces, fitted with Rapid Rectilinear Lens, and rotary shutter working behind the lens, three double backs and focussing screen.

Complete for plates,  $4\frac{1}{4} \times 3\frac{1}{4}$  ... £3 17 6  
For plates,  $5 \times 4$  ... 4 12 6  
Camera and three double backs without Lens,  $4\frac{1}{4} \times 3\frac{1}{4}$  ... £1 5 0  
Ditto, ditto,  $5 \times 4$  ... 1 10 0

## THE SHEWGRAPH

(Patent).

A Folding Pocket Camera similar in construction to our Guinea Camera, of mahogany polished, with three double backs and screen, but no lens.

For plates,  $4\frac{1}{4} \times 3\frac{1}{4}$  ... £1 2 0  
Do.  $5 \times 4$  ... 1 7 0

or complete with Rapid Rectilinear Lens and Shutter ... £2 15 0 and £3 15 0

## SHEW'S GUINEA POCKET CAMERA (Patent).

FOR HAND OR TIME EXPOSURES.

A Marvel of Portability and Cheapness, combined with thorough efficiency.

A Folding Camera (easily carried in the pocket), instantly adjustable for use, Instantaneous Lens of good quality, specially manufactured with patent instantaneous shutter for this camera, for taking Views, Groups, Portraits, etc., etc.,  $4\frac{1}{4} \times 3\frac{1}{4}$  inches, measuring only  $6\frac{1}{2} \times 4 \times 2$ , and weighing only fourteen ounces, complete with three strong well-made double backs £1 1 0

## SHEW'S ORIGINAL AUTOMATIC ROCKER, FOR DEVELOPING.

Introduced by us in 1887, and although now imitated by many, is still the only Rocker, at a moderate price, which rocks several dishes at a time, and takes also dishes of various sizes.

Price:  
With Table,  $14 \times 9$ , 17s. 6d.  
" "  $28 \times 9$ , 19s. 6d.

Special Circular, with full directions for fixing, post free on application.

This useful apparatus should form a part of every amateur or professional Photographer's developing room. It enables the operator to keep as many as six dishes in motion as long as required, thus avoiding the tedious operation of holding or shaking the dish, leaving the operator free whilst several dishes are under the action of the developer, and ensuring the necessarily prolonged development for instantaneous exposures so much in use.

By its use perfect freedom from stains is insured where long development

is necessary. It is perfectly smooth and silent in action, and will be found particularly valuable in developing large plates, which, without some such help, quickly tire the arms of the operator. Development proceeds easily and rapidly; any sized dish can be placed on the Rocker, and the plates safely left while mixing solutions, etc.

The Rocker consists of three fixed and two moving parts—the Table and the Pendulum. When not in use, the Table can be easily put away for convenience.

## The Alpenstock Tripod.

Folding when closed a round polished walnut stick or rod, without projections. Price 17s. 6d. and 21s. With ball and socket, giving universal movement to the camera, extra 7s. 6d.

## Shew's Patent Bamboo Walking Stick Tripod.

With universal top, moving in every direction; perfectly rigid; thoroughly unobtrusive, being finished as an ordinary walking cane, varying in length from 40-in. to 48-in. Price £1 5s. each.

## SHEW'S 1891 CAMERA.

Of first-class quality and workmanship, combining every latest improvement with the greatest portability and compactness, every part being so constructed as to be perfectly rigid, although so light. The back part of the Camera sliding up close to the front when required, it is equally suitable for the short-focus wide angle, and for the long-focus landscape lenses, with double extension vertical and horizontal swing-back, rising and falling front, instantly adjustable by a patent lever fixing attachment, thus avoiding any loose screws; rack-work focussing arrangement, and new patent turntable top, fitted in baseboard with patent lever fixing.

The above Camera for  $8\frac{1}{2} \times 6\frac{1}{2}$ , weighs  $4\frac{1}{2}$  lbs., and measures, when closed,  $11 \times 10\frac{1}{2} \times 2$ .

Price, with three double backs of best manufacture, with new patent hinges and springs to shutters, and three-fold sliding Tripod Stand fitting in the turntable top, complete:—

## SHEW'S PATENT CAMERA ADAPTER.

This invention has for its object the means of enabling the operator to work a plate of one or two sizes larger than that for which his Camera is constructed, thus by employing the Adapter with  $\frac{1}{2}$ -plate Camera it is at once converted into a 1-1 plate, or  $9 \times 7$ , a  $1 \times 1$  plate into a  $10 \times 8$  or  $12 \times 10$ , and other sizes in proportion. Every modern Camera will take an Adapter that will work plates of the next two sizes larger.

The Adapter is of the simplest form, fitting, as shown above, in the place of the Camera reversing frame, it is available for pictures horizontal or vertical.

The above represents a  $10 \times 8$  Adapter on a Camera  $8\frac{1}{2} \times 6\frac{1}{2}$ .

The weight is only about half that of a Camera of an equivalent size, it remains perfectly rigid and steady when fixed, and enables the photographer by using the single Combination only of his Rectilinear or doublet lens (as well as with short focus lenses) to take pictures the next one or two sizes larger, at a very small outlay, with the extra advantage of being able to take away and dispense with the Adapter and use his Camera as usual when desirable, the Camera being in no way altered.

Price, with one double back, and hinged focussing screen: For plates,  $6\frac{1}{2} \times 4\frac{1}{2}$  £1 7 6

For plates,  $8\frac{1}{2} \times 6\frac{1}{2}$  1 9 6  
 $10 \times 8$  1 13 0  
 $12 \times 10$  2 10 0

Extra double backs, each,—  
 For plates,  $6\frac{1}{2} \times 4\frac{1}{2}$  £0 11 6  
 $8\frac{1}{2} \times 6\frac{1}{2}$  0 13 6  
 $10 \times 8$  0 17 6  
 $12 \times 10$  1 5 0

A small charge for fitting to Camera from 1/6.

## SHEW'S NEW EXTENSION FRONT, OR LENGTHENING BODY.

Bellows body, perfectly rigid when extended. Fitted on any Camera at a slight charge, from 1s.

|                                                                       |      |
|-----------------------------------------------------------------------|------|
| 7 in., for $7\frac{1}{2} \times 5$ or $\frac{1}{2}$ -plate Camera ... | 17/- |
| 9 " $8\frac{1}{2} \times 6\frac{1}{2}$ " " " " " " " "                | 21/- |

J. F. SHEW & CO., 87 & 88, NEWMAN STREET, LONDON, W.

### SHEW'S IRIS ECLIPSE SHUTTER.

A New Combination Shutter in which the sheaths form iris diaphragms to the lens. It works between the lenses and forms a very light and compact shutter, the larger sizes being made in Aluminium, smaller than any made to uncover large aperture lenses, the  $\frac{1}{2}$ -plate uncovers a 1-inch lens and measures  $5\frac{1}{2}$  in circumference.

|            |                     |     |      |
|------------|---------------------|-----|------|
| To uncover | 1-in.               | ... | 50/- |
|            | $1\frac{1}{2}$ -in. | ... | 70/- |
|            | 2-in.               | ... | 75/- |

With Indicator for various exposures from  $\frac{1}{100}$  of a second to 3 seconds.

### SHEW'S UNIVERSAL CAMERA CLIP.

This instrument is particularly recommended to Travellers and Yachtsmen, as it can be instantly attached to any part of the vessel where the Tripod Stand is not available.

No. 1. For Cameras  $8\frac{1}{2} \times 6\frac{1}{2}$  and under, 25/-

No. 2. For Cameras  $12 \times 10$  and under, 37/6.

Extra deep cheeks sometimes required for gripping on large rail of Yachts, extra, 4/6.

Circular Motion to Nos. 1 and 2, enabling hinge B to be turned at right angles to A, extra, 12/-

Gimbal Pendant for suspending Cameras in a level position from any projecting part of a vessel, 25/-

FACSIMILE SIZE OF THE LAMP.

### THE LIGHTNING FUSEE. Repeating or Continuous.

The most perfect Flash Lamp yet introduced; contains sufficient magnesium for twelve exposures, and measures only  $1\frac{1}{2} \times 1\frac{1}{2} \times \frac{1}{2}$  in.

No spirit required, and no danger incurred in use. Perfect cleanliness and the utmost economy ensured.

THE LIGHTNING FUSEE consists of a small lamp as above, easily carried in the pocket. The flame is obtained with an ordinary wax fusee placed in the tube in front. The wax fusee is used in preference to any other flame as it contains chlorate of potash, which gives intense heat and, therefore, consumes the whole charge of powder given, which no other lamp at present made does.

Price, with Ball and Tube complete, 6/6.  
Two Lamps, with connexion, 12/6.

### SHEW'S 1891 SHUTTER.

A compact form of Shutter, for time or instantaneous.

Adjustable for exposures from  $\frac{1}{100}$  of a second to 3 seconds.

No. 1, with aperture  $1\frac{1}{2}$ -inches, 32/6.

No. 2, with aperture  $1\frac{1}{4}$ -inches, 35/-

No. 3, with aperture  $1\frac{1}{2}$ -inches, 45/-

### THE DAISY METAL PRINTING FRAME, LIGHT, COMPACT, AND INDESTRUCTIBLE.

This new make of Printing Frame presents the following advantages over all other yet manufactured.

1. It takes up considerably less room, a frame for plates  $6\frac{1}{2}$  by  $4\frac{1}{2}$  measuring only  $7\frac{1}{2}$  by  $5\frac{1}{2}$ , the usual make of wood measuring  $8\frac{1}{2}$  by 7. A great advantage to the Professional and Amateur alike.
2. The face of the frame does not project shadows when exposed to strong light, thereby reducing the printing surface of the negative, a fault so often found in the present form of frames.
3. It does not spoil from exposure to the variable weather, as the wood glue-jointed frames do, and this alone should recommend it to the professional printer as a great saving of expense.
4. It is exactly half the weight of the commercial printing frame of wood, a frame for  $6\frac{1}{2}$  by  $4\frac{1}{2}$  weighing only 8 ounces, and the same size in wood weighing 16 ounces.
5. It is provided with a well-made clamped back, with hinge let in all along at a distance of two-thirds from the end, enabling the printer to see nearly the whole of the print when necessary.

### CHEMISTS AND DEALERS LIBERALLY DEALT WITH.

We would call the special attention of intending purchasers at home and abroad to the selection of our Specialities, a few of which are mentioned in the preceding pages.

Foreign orders, whether direct or through Agents, have our prompt and careful attention. Any articles not in our List, supplied at advertised prices; careful attention being given to secure the best freight if no preference is given with the order.

Cheques should be crossed "Bank of England." Foreign orders should be accompanied by a banker's draft or the usual London references.

J. F. SHEW & CO., Established 1849, Manufacturers of Photographic Apparatus, and Dealers in every article required in the practice of Photography. Only address—  
87 & 88, NEWMAN STREET (Four doors from Oxford Street), LONDON, W.

July 30, 1892.

Gentlemen,

We call your special and careful attention to the matter in our four-page Illustrated Inset in same issue, as it specially refers to the Pharmaceutical Profession.

Yours faithfully,

**SPRATTS PATENT LIMITED.**

# A PROFITABLE ADDITION

## JEVONS' LINCOLNSHIRE DIPPER

Is the Best, Cheapest, and most convenient Sheep-dipping apparatus on wheels. It requires but few hands to work it, and will dip efficiently from twelve to fifteen hundred sheep in a day.

All Agricultural Chemists should have one of these machines, and thus add a profitable branch to their business, instead of leaving the trade in the hands of men who frequently have no knowledge of the materials they are using.

Full instructions will be given to purchasers of this machine, not only how to work it, but also how to make a safe and reliable Dip, and every information necessary to secure a good trade.

Speaking of this Dip, Professor Tuson, of the Royal Veterinary College, says :—

"From an examination of your Sheep Dip, and a careful consideration of the recipe from which you prepare it, I feel quite sure that for the destruction of Ticks and the Scab Insect, as well as of other external Parasites infesting Sheep and other animals, the said Dip is extremely efficacious.

"I am also of opinion that it possesses the additional and very valuable quality of preventing the attacks of Fly, and of improving rather than injuring the skin and wool."

Instances can be given of Chemists who, without any previous knowledge of the business, in less than three years from commencing have been making a clear profit of from £50 to £100 per annum.

# **A "STORES" CAUGHT!**

Mr. JUSTICE STIRLING.—October 30, 1891.

## **KEATING v. KIBBLE & CO.**

**T**HE Defendants are Proprietors of large Stores at Deptford, and when asked for "Keating's Powder," sold by their shopmen an article not made by me. The Defendants denied that this was done with their knowledge, and this may be conceded, but it cost them over £40, although in this instance I pressed my Solicitors to be as considerate to them as possible. The Court ordered the Defendants to pay the whole costs of the action, and issued an injunction restraining them from offering for sale any preparation other than that prepared by Thomas Keating under the name of "Keating's Insect Powder."

## **IMPORTANT NOTICE.**

12 BRIDE LANE, LONDON, E.C., *March 15, 1892.*

**W**HEREAS I have reason to believe that certain persons have sold to Customers Packets of what they represent to be KEATING'S INSECT POWDER, which Powder has not been manufactured by me, I HEREBY GIVE NOTICE that I shall institute Legal Proceedings against persons found to be improperly selling any but Keating's Insect Powder to customers asking for it, which action renders them liable to very heavy penalties.

THOMAS KEATING.

## **A CHEMIST.—HEAVY DAMAGES.**

In the High Court of Justice—Chancery Division. Mr. JUSTICE NORTH—October 26, 1886.

## **KEATING v. POLL.**

### **IT WAS ORDERED—**

That the Defendant be perpetually restrained from stating or causing to be stated that Keating's Persian Insect Destroying Powder contains **any substance poisonous to animals or human beings**, or from making any statement to the effect that such Powder is dangerous to animals or human beings.

### **IT WAS FURTHER ORDERED—**

That the Defendant, William Sheppard Poll, do pay to the Plaintiffs their costs of this action.

**PRIVATE FORMULÆ.**—WYLEYS (LIMITED) will be glad to prepare Patent Duraplastic Balls from private recipes or modifications of the Veterinary Pharmacopœia formulæ, also to model and coat any masses which may be entrusted to them. Arrangements can also be made to have the name of the Chemist upon each Ball if desired, upon orders of two gross of assorted Balls.

All Balls are packed in boxes of one dozen. Samples forwarded free on application.

PROPRIETORS AND SOLE MANUFACTURERS,

## WYLEYS LIMITED, COVENTRY.

Branch House—52 Moor Street, BIRMINGHAM.

### Grantham Veterinary Infirmary.

I have much pleasure in certifying that I have used Wyleys & Co.'s Patent Duraplastic Horse Balls for some considerable time. I have found them universally efficacious, pleasant to administer, quick in action, and in every way preferable to the old-fashioned paper-covered bolus of our forefathers.

BEN. H. RUSSELL, F.R.C.V.S.

### Stratford-on-Avon.

Sirs,—I can testify to the thorough therapeutic action of your patent Duraplastic Balls, and I prefer them to the old-fashioned balls on account of their easiness to deliver to the patient, and also of their remaining of the proper consistency, which I consider most beneficial.

I am, Sirs, yours truly,

JNO. JAS. CROWHURST, M.R.C.V.S.L.

### Hertford Street, Coventry.

Dear Sirs,—I think the Duraplastic Horse Balls a very good invention. They save no end of trouble, and are always clean, keep well, and act satisfactorily. The Physic Balls I find very reliable. You asked me some time ago about some Physio Balls, and as I have not had occasion to blame any I have used for non-acting, I thought I would just mention the fact.

Yours faithfully,

WM. DALE, M.R.C.V.S.

From T. Blakeway & Son,

Veterinary Surgeons, Stourbridge.

Dear Sirs,—We should be obliged if you would kindly forward us at your earliest convenience five gross of your Patent Duraplastic Physic Balls. The coating of these balls we consider a very elegant preparation, and from its smoothness, coupled with the shape in which the balls themselves are made up, we find them particularly easy of administration, and the chances of their being coughed back are reduced to a minimum.

Faithfully yours,

JAMES BLAKEWAY.

West Bromwich.

Gentlemen,—I have been using your Duraplastic Horse Balls for several months, and am very pleased with them. I find that to a single-handed practitioner they are invaluable.

Yours truly,

HARVEY COLLETT, M.R.C.V.S.

Pilules and Tinctures at **3s. 6d. doz.**

The undersigned call the attention of Medical Men and  
Pharmacists to the superior nature of their

**Pure Oil of Eucalyptus Globulus,**

distilled by them from leaves of Blue Gum trees cultivated  
in California. It should be noted that the reputation of  
Eucalyptus Oil is solely based upon the virtues of the  
Globulus variety; but very little of this now comes into the  
market from Australia, because it can only be produced  
there at from 15s. to 20s. per lb.

The DOWNIE B. I. P. CO. have extensive forests of Blue Gum  
trees in California, grown from Australian E. GLOBULUS  
seeds. The leaves of these trees are used for manufacturing  
an aqueous extract, as a boiler-incrustation preventive, and  
the company have lately perfected the means for collecting  
the Essential Oil. This Oil is of great purity, is unmixed  
with kindred bodies, and contains the full percentage of  
Eucalyptol. Since it is obtained as a by-product, the manu-  
facturers place it on the market at a price which in other  
circumstances would be impossible.

Please specify "DOWNIE'S" in ordering through any Wholesale House, as  
there are many adulterated and worthless varieties in the market.

**DOWNIE B. I. P. CO.**

ILLUSTRATED PRICE LIST ON APPLICATION.

### THOMPSON & CAPPER'S DENTIFRICE WATER.

Sells well everywhere, its beneficent qualities being attested to by physicians in all parts of the world. (See Testimonials.)

In 1s. 6d., 2s. 6d., 4s. 6d., and 8s. 6d. Bottles.

GENTLEMEN,—As we have received numerous complaints from all parts of the country from people who have been unable to get our “CARBOLINE” Disinfectants from Chemists, we have decided to send our goods out on Sale or Return, so that no Chemist will have an excuse for not stocking them.

No “Cutting” is allowed, and the profit is 60 per cent.

If the goods prove dead stock, we take them back at the end of Three Months, and pay the return carriage.

With each lot of Goods, a handsome **SHOW-CARD** is sent, along with a quantity of **BILLS**.

The Goods are put up in first-class style, and are of the very best quality.

### ANALYST'S REPORT:

2 Melbourne Place, Bradford, January 26, 1892.

Mr. HENRY ELLISON, Cleckheaton.

Dear Sir,—I have made a careful examination of the sample of Carboline received from you on the 17th ult., and have compared it with several well-known disinfectants in the market.

Series of Experiments were made upon Extract of Beef, Albumen, Infusion of Hay, Urine and Flour Paste, and in every case Carboline was found to possess a greater power of arresting the growth of Animalcules and Fungi than any of the other disinfectants examined.

Carboline is a most powerful disinfectant and antiseptic, and one which I can confidently recommend for all purposes of disinfection.

It possesses the useful property of readily mixing with water in all proportions, forming a perfect emulsion.

Yours truly,

C. RAWSON, F.I.C., F.C.S. (Head Master, Chemistry Department, Technical College).

SOLE MAKER—

# H. ELLISON, F.C.S.

The Disinfectants Chemical Works, Cleckheaton, YORKS.

Also Maker of Ammonia, Carbolic Acid, Liquid and Crystal, Carboline and Carbolic Soaps (Household and Toilet), Sheep Dips, Benzol, &c.

## HAS THE LARGEST SALE OF ANY SMELLING BOTTLE IN THE WORLD.

It is the most popular shilling article in the market, being well got up and largely advertised, commands a rapid sale, bears a large profit, and gives universal satisfaction.

Counter prescribers can recommend it with confidence for cold in the head, nervous headache, and faintness. Sent out in 1/3 dozen cases. Wholesale from all the Patent Medicine Depôts.

Show Cards and Handbills from MACKENZIE'S CURE DEPOT, READING, ENGLAND.  
Depot for United States and Canada—THE MACKENZIE DRUG COMPANY, Ltd., CHICAGO, ILL., U.S.A.

## FOREIGN SPECIALITIES & MEDICINES.

REVISED PRICE LIST.

# ROBERTS & CO.

## FOREIGN AND ENGLISH CHEMISTS,

# STICKY FLY PAPERS.

## WARNING.

MESSRS. TUNBRIDGE & WRIGHT, READING, desire to warn Chemists and Dealers against persons who may represent and offer to print and sell Sticky Fly Papers with names of purchasers to be spread by Tunbridge & Wright. £5 REWARD will be paid to any person giving information which will lead to the detection and punishment by process of law of such misrepresentations. Messrs. Tunbridge & Wright are the originators of the process and machinery, and are the sole vendors of the "FLY CEMETERY," duly protected by Letters Patent. All Infringers will be at once proceeded against. Buy only the "FLY CEMETERY."

Information as to Infringements may be given to

Messrs. MANN & TAYLOR, Solicitors,

109 New Oxford Street, London.

It is acknowledged by the Trade that  
**THE "FLY CEMETERY"**

Is the most saleable Fly Paper ever introduced. It is non-poisonous, and the enormous annual increase in the sale of it is positive proof of its popularity. Many Chemists sold more "Fly Cemeteries" last year than they ever did in their lives of all the other fly papers put together.

# VINACOCA.

**The Best & Cheapest on the Market.**

"THE CHEMIST AND DRUGGIST," March 14, 1892, page 378, says:—

"We have received from the French Hygienic Society, of Conduit Street, W., a sample of their Vinacoca, a COCA WINE made exclusively from the COCA-LEAVES with a fine Madeira. It is a perfectly satisfactory preparation, quite wholesome as a wine, "and invigorating as a medicine."

A small square-shaped Opal Tablet, with the word "Vinacoca" thereon, makes an effective Show Card. These can be fixed, free of expense, on Chemists' windows, doors, &c., who become agents for Vinacoca.

*A few Agents wanted in all Towns in Great Britain where not represented.*

The VINACOCA is carefully prepared from the best Coca Leaf only.  
(No addition of Cocaine.)

## VINACOCA

*is a direct stimulant of the most active kind, supporting life in a manner almost miraculous, without disturbance of the vital functions. For the voice, a wineglassful before any ordeal is sufficient. Its effect upon the vocal cords is surprising, and of great value to Public Speakers, Professional and other Singers, and Lecturers.*

*Sold in Bottles at 3s. 6d. each, or 40s. per dozen, Retail.*

**Usual Trade Discount.**

**PAMPHLETS for DISTRIBUTION, CARRIAGE PAID.**

COCA is prepared in various forms :  
COCA LOZENGES, COCA TABLETS, COCA ELIXIR, COCA TEA, COCA CHOCOLATE, STAMIN (Coca and Beef Extract), COCA TOBACCO, &c.

FULL PARTICULARS FROM

**THE FRENCH HYGIENIC SOCIETY,**  
6 Conduit Street, Regent Street, LONDON, W.

## TESTIMONIALS.

FOLKESTONE.

DEAR SIRs,—I am pleased to report most favourably on Hall's Coca Wine, notably in the case of a child suffering from *Tabs Mesenterica*, who retained it in her stomach when other foods were habitually rejected. I should like to try further experiments with the Wine, which to my mind is most admirable in what are called wasting diseases.

Yours truly,  
J. HALPIN, M.R.C.S., &c.

Messrs. Stephen Smith &amp; Co.

DOVER.

DEAR SIRs,—Having been recently suffering after Influenza, I tried Hall's Coca Wine, and found it to be an excellent nervine tonic.

Yours truly,  
CHARLES H. MAYHEW,  
M.R.C.P., L.R.C.S.

Messrs. Stephen Smith &amp; Co.

MANCHESTER.

DEAR SIRs,—The sample of Hall's Coca Wine you sent me I appreciate very much for its rapidly-stimulating action on muscle and nerve, in cases of physical or mental exhaustion, as the case may be. I can speak thus confidently from experience and testify to its worth after exertions of any kind.

Yours faithfully,  
C. BARRIE TAYLOR, M.B., L.R.C.P.,  
Messrs. Stephen Smith & Co. &c., &c.

WOOLWICH.

DEAR SIRs,—I received the bottle of Hall's Coca Wine, and am at present giving it in a case of Insomnia, and may say that the effects up to now are very good. I shall be pleased to prescribe it in any suitable case under my care.

Yours truly,  
G. HENDERSON BAIRD, L.S.A.  
Messrs. Stephen Smith & Co.

# HALL'S COCA WINE

A HIGH-CLASS MEDICATED WINE AT A REASONABLE PRICE

## 42½ PER CENT. PROFIT!

STEPHEN SMITH & CO., BOW, LONDON.

A high-class preparation of real merit. It is highly esteemed by the Medical Profession because it is standardised. It is popular with the public because it is extremely palatable and suits the English taste. It is rightly a favourite with the retailer because it bears a good profit; at the same time it is reasonable in price.

The Wine has been submitted to every known authority, and the verdict has been unanimous, viz. that it is THE BEST. We have numbers of testimonials from doctors who prescribe it, retailers who sell it, and persons who drink it.

On receipt of Card we will forward, free and carriage paid, to any Chemist who holds the retail wine licence, one bottle of Hall's Coca Wine. This Wine retails at 3s. 6d. per bottle, the wholesale price is 26s. per dozen, Cases, Pamphlets, Frames, &c., included. We also undertake to create a demand for it in any district that has not already been worked.

# THE CHEMISTS' ASSOCIATION (LIMITED).

[COPY OF CIRCULAR.]

Telegraphic Address—  
"Beatrop London."

Curtain Road,  
London, E.C.,  
13th July, 1892.

DEAR SIR,—Complaints have been received from Chemists throughout the United Kingdom that they have not been furnished with prospectuses of The Chemists' Association (Limited). An investigation has consequently been made into the accuracy of the Trade List used, and it has been discovered that an immense number of names are entirely omitted and others are inaccurately stated. For instance, in one town, out of 38 Chemists, 26 are omitted.

In the very nature of a movement for co-operation in buying, it is essential that the whole Trade should have the opportunity of participating.

Although a substantial part of the issue has already been subscribed, my directors have felt it their duty to reserve a number of Shares for Chemists who, by the unfortunate mistake above explained, have been prevented from applying for membership before the 14th inst. An early communication is necessary to ensure an allotment.

On receipt of a postcard from you, I shall be pleased to forward a copy of the Prospectus and Form of Application so as to remedy the omission.

I am, dear Sir,

Yours faithfully,

JOHN THOMPSON,  
*Secretary.*

The Directors of the Association are pleased to be able to report that the applications for membership at the onset exceeded their expectation, and further applications continue to be received from day to day.

They would remind the Trade that each accession of membership strengthens the Association, and tends to increase the bonus in which all members will participate.

The enterprise has, however, been so well taken up by the Trade that its success may be regarded as already ensured.

The Directors will, at an early date, take into consideration the stocking of drugs on a sufficiently large scale to command the market.

Meanwhile, however, the Association is in a position to execute Drug Orders in the ordinary course.

The Association has already been approached by leading Manufacturers in branches of the Sundries Trade, who offer terms so advantageous as to be without precedent, thus placing the Members on a footing which they can gain in no other way.

[From THE CHEMIST AND DRUGGIST, July 9, 1892.]

## THE CHEMISTS' ASSOCIATION, LIM.

VERY prominent attention is directed this week to the conversion of an old company into a new one, with the object of offering to chemists and druggists, principally, a co-operative interest in an established business in the druggists' sundries and patent-medicine lines.

The scheme corresponds with an idea which has been advocated by correspondents in our columns and elsewhere over and over again. The Association now proposed starts with the very considerable advantage of an established connection. It takes over as the nucleus of its operations the business of Messrs. Thompson, Walters, Hole & Co. (Limited), of Curtain Road, Great Eastern Street. For the purchase-money the new Association is to become possessed of the extensive leasehold property in which the business is carried on, the stock, and the goodwill.

Mr. Martin Magor, pharmaceutical chemist, of Corporation Street, Birmingham, the chairman of the new company, with Mr. Howard, of the firm of Howard, Howes & Walters, the company's auditors, called at this office on Monday to put before us their scheme. It was pointed out to those gentlemen that the prospectus did not give particulars showing the value of the property to be sold. Mr. Howard stated in reply to this that he had all those particulars with him, and was willing to place them before us as fully as we might wish. He stated further that he had at first inserted such details in the prospectus, but that these had been withdrawn by the Board for trade reasons.

We did not accept the proposal to examine the figures offered to us. To check them with a view to certify to the trade the soundness of the investment would have been to saddle ourselves with a responsibility which it is not our business to assume. We record the fact that the request that we should do so was made to us in all seriousness.

Mr. Magor then informed us of the negotiations which had resulted in his acceptance of the position of chairman of the Board, and stated that the other chemist directors (all men, like himself, of good commercial position and with trade experience) had been selected by himself. He said the stock had been taken under his own supervision, and valuing it at strictly cost prices they had found over 11,000% worth of perfectly saleable goods. He had perfect confidence that the company was buying a satisfactory business at a fair price.

Mr. Howard said the goodwill had been estimated at three years' profits, and that out of the money to be thus paid the vendors had undertaken to pay all the costs incurred in floating the new Association. He assured us that the valuation of the property showed a certain fair percentage of dividend, and he pointed out what is obvious enough—that every new shareholding customer would tend to augment that profit.

These were the salient points of the conversation, and we have thought it the fairest way towards both vendors and probable purchasers to state briefly exactly what passed between us, so that the latter can have such materials for forming a judgment in regard to the investment invited as it is in our power to give them.

43 Highest Awards over all Competitors throughout the World.
